## FREIGHT

All freight is quoted individually, tailored to customer's needs. All Pumps has an excellent database of freight companies to cater for delivery for the most complex packages to the most remote parts of Australia. We are happy for our customers to organize their own freight or compare freight quotations.

## OFFICE HOURS

All Pumps is dedicated to providing flexible opening hours in view of servicing all customers. Our hours of trade are Monday - Friday 6.30 am - 5 pmAEST

## RETURN POLICY

**CANCELLATION:** Orders accepted by Seller cannot be countermanded or delivery deferred or, other than arising out of a breach of any warranty or consumer guarantee claim, goods returned, except with the written consent of Seller and upon terms that reimburse and indemnify Seller against all loss including cartage, bank charges and other incidental expenses on any part of the order that is cancelled. Where Seller agrees to accept goods for return a re-stocking charge of 20% of the price of goods returned will be made.

**ACCEPTANCE AND CLAIMS:** Acceptance of the goods delivered shall be deemed for all purposes to have taken place at the expiration of seven (7) days from the date of each delivery, goods will only be accepted for return if they are still in original condition as supplied.

## 40 Years of Service...

Since commencing operation in 1972, All Pumps Sales and Service has been committed to providing the answer you need from an urgent spare part requirement to a custom built pumping system. The ability of our trained sales and service personnel to provide innovative, economical and reliable solutions to the exact requirements of clients in the industrial & mining service industries is supported by an unparalleled product range of robust and reliable pumps. This has resulted in a formidable reputation and extensive acceptance within all industry sectors.

**Our trained sales and service personnel provide innovative, economical & reliable solutions for applications / industries covered:**

Mining  
Rainwater Harvesting  
Sewage & Stormwater

Civil & Construction  
Wastewater & Sludge  
Fire Protection

Building Services  
Irrigation  
Environmental

## Customised Packaged Solutions On Time

**We stock what we sell - We customize what we sell - We service what we sell**

- Satisfaction of your parameters. We recognize that you need a package which best accommodates your application.
- A pivotal requirement. A pump in isolation will never be enough.
- The answer you need. Technical, practical and economical.
- You need it now. We stock what we sell & have mastered the art of getting our packages to you. Locations in Sydney, Brisbane & central NSW assist in making this a reality.

## Our Company Philosophy

### Our Mission

Engender and maintain a culture of ingenuity that continuously contributes to the improvement and progress of our system engineering.

### Objectivity

We critically examine our solutions to ensure they align with our clients' objectives and desired outcomes.

### Partnership

We take a personal interest in our clients' success. We work with them as partners to help reach their objectives.

### Our Vision

Be the leader in the supply of pumps, pumping equipment and associated design engineering; to provide the gateway to best practise and competitive solutions.

### Innovation

We encourage innovation, continuous improvement and learning.

### Respect

We treat our clients, our suppliers, work colleagues and the community with respect.

### Our Corporate Values

At All Pumps, our clients are served by professional, knowledgeable and efficient people. We build relationships based on:

### Integrity

We always act with the utmost integrity, and choose what is ethical and right for our clients and the environment.

### In-House Capabilities

We have extensive in-house based facilities including:

- Design selection
- Project management
- Manufacture
- Drafting
- Stock holding
- Testing to AS2417 and in field service team

The All Pumps design team is committed to continual improvements in both quality and design. We are continuing the standard of excellence with the latest and most up-to-date equipment to ensure the development of high quality packaged pumping products.

The use of Autocad, Solid Works and 3D Modelling are only a part of the detail used to enhance our products.

- Complete technical data available
- Detailed drawings of pumps & systems
- Pump & controller troubleshooting guides

All Pumps Packaged Pump Solutions are assembled at our Sydney manufacturing facility. With our extensive & comprehensive product range coupled with 40 years experience in pump systems manufacture we can produce an engineered solution to solve the most complex application.

All Pumps Sales & Service has total control over production procedures ensuring that quality standards and time frames are met.

## PACKAGED PUMP SOLUTIONS... ON TIME

All Pumps Sales & Service has a complete turnkey focus on all pumping equipment, water supply and treatment, and waste water treatment solutions. We embrace all market sectors including industrial, civil, municipal, mining, and commercial operations. All products and processes are quality controlled and engineered to the relevant industry standard and best practise that is applicable. As an organisation All Pumps is committed to a continuous testing regime (both in-house and in the field) to meet industry standards.

### Our package systems are

- Purpose built
- Cost effective
- Highest standard of engineering and reliability

Situated in both Sydney and Central NSW and Brisbane with over 10,000 metres<sup>2</sup> of facility, All Pumps Sales and Service has a focus on quality products and excellent service with an extensive product holding.

### We have a proven track record for:

- Fast and effective response to enquiries
- Reliable deliveries
- Competitive prices
- Efficient after sales service

- Civil & construction
- Mining & mineral processing
- Environmental

- Wastewater & sludge
- Petro chemical
- Irrigation & sewage

- Pharmaceutical
- Paint printing & packing
- Food & beverage

- Storm water
- Building services
- Rainwater harvesting

## Project Gallery

Collaboration with Customers  
is key to a successful project

On-Site Installation, testing  
and commissioning

We understand that everything we do affects the environment.

We continually review our products, systems & processes to identify opportunities to be more sustainable towards the environment.

# We are continually working to find new ways to make our service to you as sustainable as possible.

## Commitment to a Better Environment.

- To review our products and processes and select those that offer a benefit in sustainability while delivering on our customers specification.

The Company's OH&S Objectives are:

- Commit to the health and safety of the company's employees, subcontractors, the general public and other personnel who may be on work sites.
- Ensure the Company's employees, subcontractors and agents comply with any Acts, Regulations, local laws and by-laws, Codes of practice, Australian Standards and Principal Contractors policies and procedures which are in any way applicable to your project.
- Ensure company's objectives will be met through good leadership, commitment and continual training.

## Purpose of Company's Safety Management Plan

The purposes of Company's safety Management Plan ("SMP") are to:

- Define Company's management of OH&S when delivering the contract services.
- Provide guidance to Company Staff on Company's obligations under the contract.
- Assure the Principal Contractor that the Company is fulfilling its obligations.
- Set down the frequency and responsibilities for management review of this plan.

## Practice of Safety Management

The company will:

- Assess risks and plan work activities to eliminate or control foreseeable hazards or risks.
- Comply with relevant OH&S, workplace injury management and workers compensation legislation and regulations.
- Establish measurable objectives and targets for continuous improvement.
- Consult with employees and subcontractors and disseminate OH&S information.
- Make this SMP available to all employees.
- Make available relevant parts to subcontractors working at the site during construction/maintenance activities.
- Maintain the workplace in a safe condition.
- Maintain plant and equipment in a safe condition.
- Provide appropriate instruction and training for employees and subcontractors to assist them in avoiding unsafe situations, unsafe work practices and the use of defective equipment.
- Provide adequate facilities for outdoor staff.
- Provide sufficient resources to achieve all the above.

Environmental

Whether an urgent on site call or routine service, our highly trained service team is dedicated to provide economical repairs and maintenance to get you going again.

Time is money and having a production line not producing goods as a result of pump failure can be extremely costly. To this end All Pumps Sales & Service have developed a complete suite of service products, that can be tailored to all clients, to ensure plants operate to maximum efficiency, increase the mean time between failure and to reduce down time caused by pump failure.

The range of our services include:

#### **1. In-House Pump Repairs**

This is recommended for major pump overhauls and rebuilds. All Pumps use OEM spares, where available, in all rebuilds and services. All in-house repairs/ rebuilds are tested intensively prior to redelivery to the client.

#### **2. On-Site Pump Repairs**

Clients can reduce plant down time by having the pumps repaired on-site. On-site works are limited to changing seals and gaskets. Pumps repaired on-site are not tested prior to being returned to service.

#### **3. Scheduled Maintenance**

A contracted, fixed fee service agreement is established to assist clients increase the mean time between failure and cap/ manage costs associated with repairs. This program can be viewed as a preventative maintenance schedule.

#### **4. Pump Audits**

All Pumps highly trained staff can carry out a thorough audit, identification, tagging and recording of all details of pumps used on site. This is a vital tool to assist with identification of spare parts requirements in the event of failure.

#### **5. Spare Parts**

All Pumps maximise that we stock what we sell and we service what we sell is not just limited to pumps only. We keep a comprehensive range of OEM spares in our centrally located warehouse.

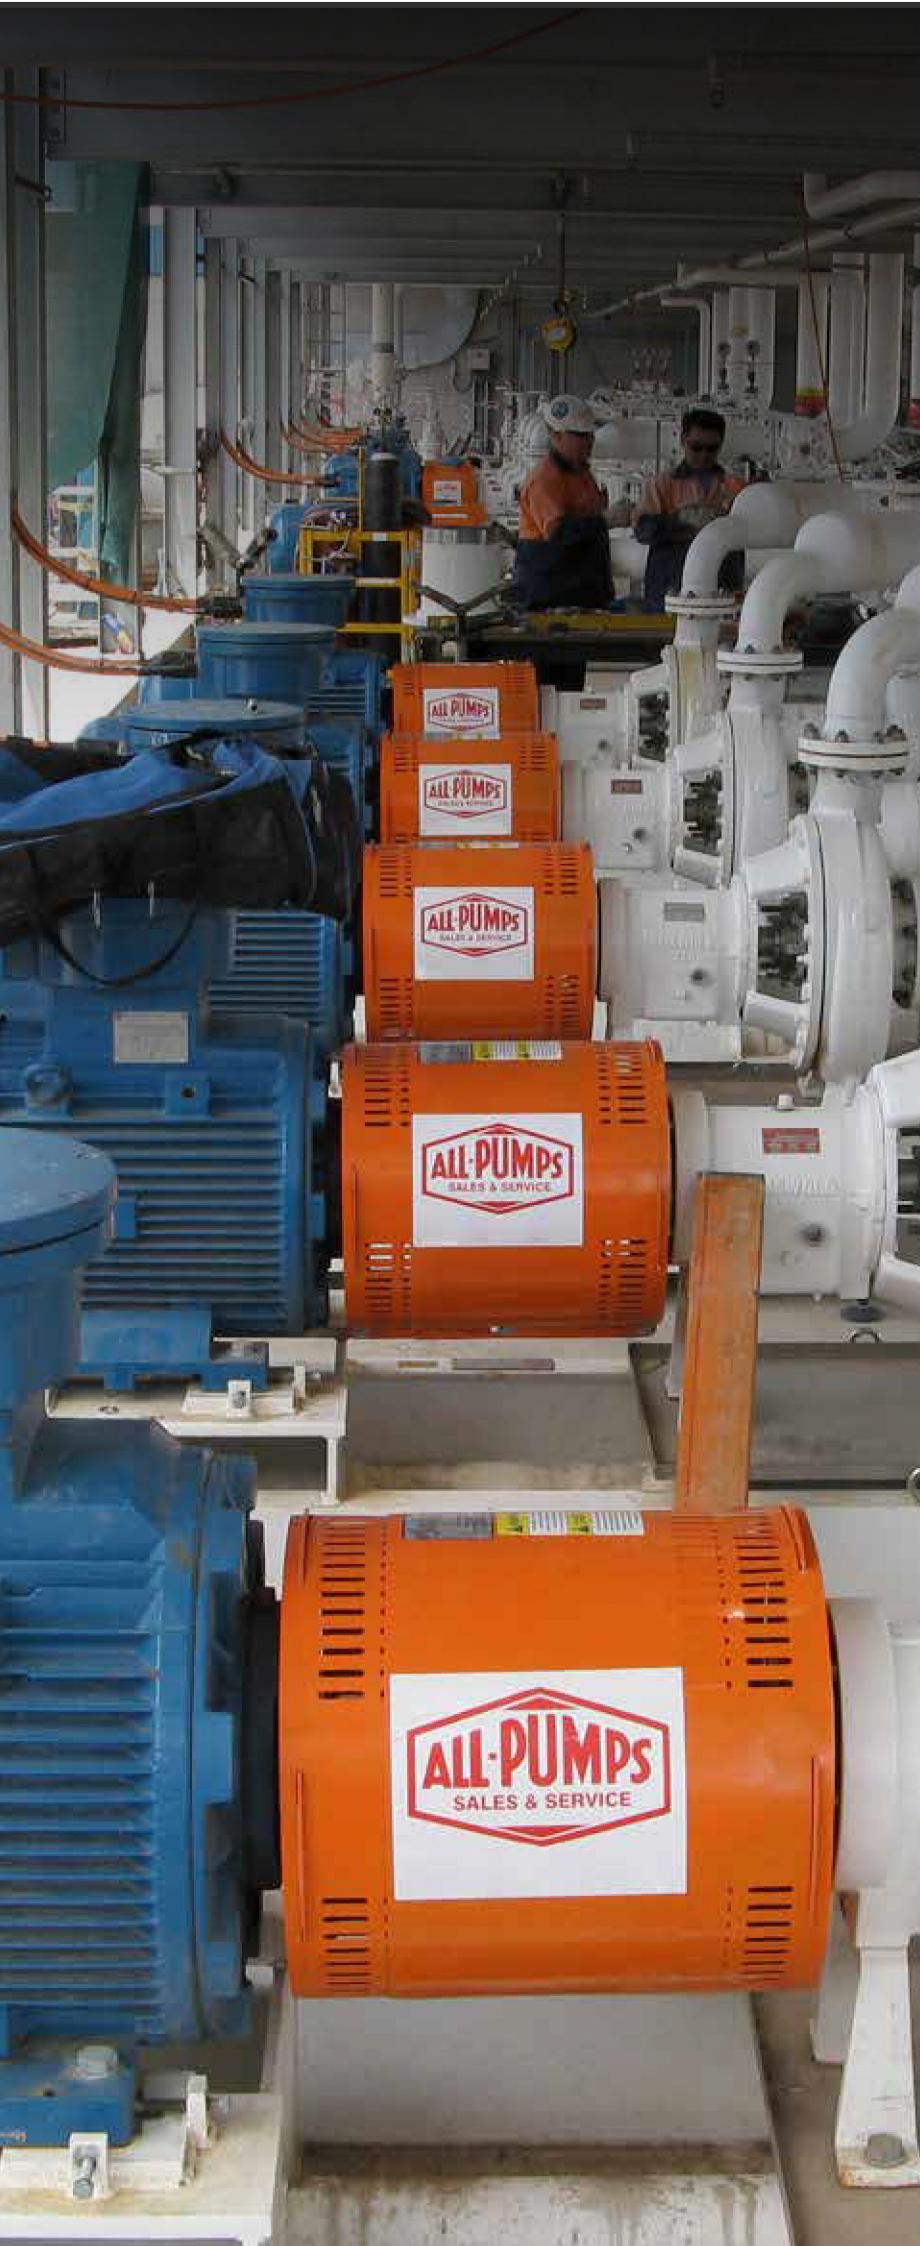

#### **6. Re-engineering**

All Pumps have the ability to re-engineer pumps should the system requirements change.

Call All Pumps, 1300 255 786, to discuss how we can assist you to keep your plant operating efficiently.

## In-House Technical Drawings &amp; Engineering

A large industrial pump system is being installed or maintained in a factory setting. Several orange electrical motors, each labeled "ALL PUMPS SALES & SERVICE", are mounted on a metal base. They are connected to a white centrifugal pump unit. In the background, two workers in safety gear are visible, one standing and one working on a control panel. The environment is filled with various pipes, valves, and industrial equipment.

# HYDROMAX DIN SERIES

Quality - ISO 9001 - DIN 24255 - Back Pull-Out - Centrifugal Pumps

## Introduction

The DIN Series is a single stage end suction centrifugal pump. It provides high performance at an economical cost and is particularly suited to mechanical and fire services as well as being suitable for use in a variety of other industrial applications.

The DIN pump can be fitted with a range of mechanical seals or a simple packed gland depending on the liquid you are pumping. These pumps feature a back pull-out design for easy maintenance and are available in a variety of materials.

The HydroMAX DIN pump has been engineered to the stringent International Standard DIN 24255

## Description

Volute casing centrifugal end suction pump with Back Pull-Out (BPO) feature, main dimensions and performance according to EN733/DIN24255 standards.

**Type:** End Suction Centrifugal, Back Pull-Out (BPO)

**Design:** EN733/DIN24255

**Flange:** DIN2332 PN 10RF

**Direction of Rotation:** Clockwise as viewed from the drive end

### OPERATING CAPABILITIES

Flow Rate(Q)	up to 1100m³/h > 1800m³/h
Head(H)	up to 150m
Speed	1450-2900 rpm (50Hz) 1750-3600 rpm (60Hz)
Operating Temp	-10 °C to 105 °C standard; optional 150 °C
Pressure Rating	10 bar standard; optional 16 Bar

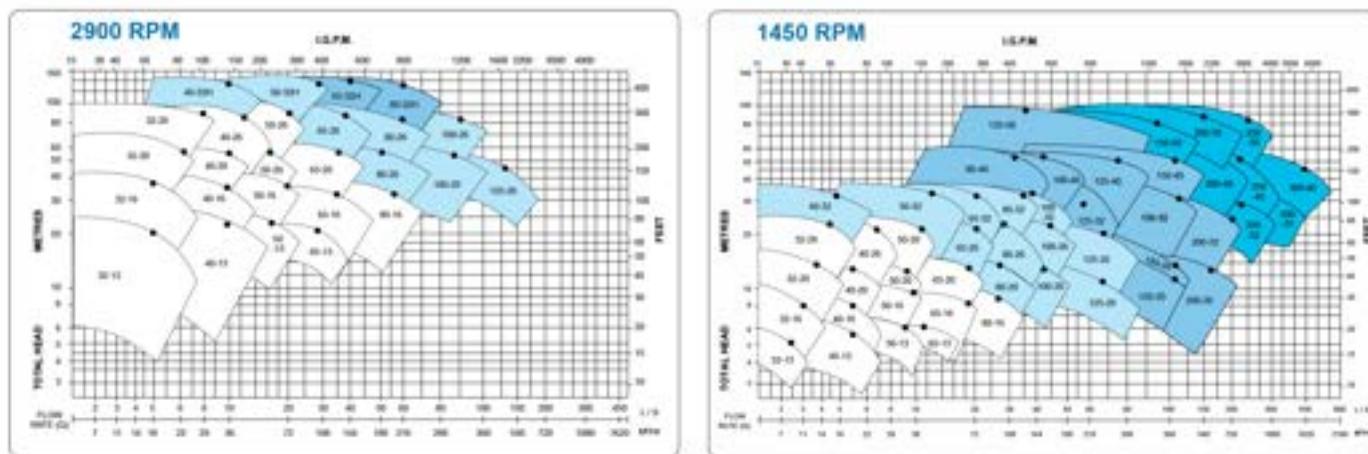

## Material Options

	CAST IRON	DUCTILE IRON	BRONZE	STAINLESS STEEL	MECHANICAL SEAL AND GLAND PACKING	SS420 OPTIONAL AISI304 & AISI316
Casting	✓	✓	✓	✓	—	—
Impeller	✓	✓	✓	✓	—	—
Shaft	—	—	—	—	—	✓
Shaft Sleeve	—	—	—	—	✓	—

## Applications:

- Air-conditioning
- Heating and Ventilation
- Refrigeration
- Fire protection
- Plumbing
- Circulation
- Transfer
- Irrigation
- Drainage
- Water Pressure Boosting
- Process industry
- Petroleum products
- General industry
- Food and drink manufacture
- Water treatment and supply
- Cooling towers

## Performance - 50Hz

# HYDROTMAX ISO SERIES

Quality - ISO - SANI - SABS Listed - Centrifugal Pumps

## Features

- Superior hydraulic design and manufacturing methods for significantly higher efficiencies and reduced maintenance.
- High efficiency double curvature impeller vanes.
- 32 to 200mm discharge.
- Cast iron, zinc free bronze or stainless steel construction.
- Wide range of options.
- AS2129 Table "E" flanges as standard with optional drillings available.
- Back-pullout design does not require the disconnection and removal of motor or suction and discharge lines for maintenance.
- Heavy duty oil lubricated double row ball bearings in drive end and single row roller bearings in wet end.
- Taper mounted and keyed impeller.
- Horizontal or vertical pump discharge mounting.

## Options

- Wear Rings
- Mechanical Seal or Packed Gland Seal, Oil or Grease Lubricated Bearings, Paint and Internal Coatings
- Materials of Construction
- Flange Drillings

## Applications

- Mining
- Irrigation
- Fire Protection
- Industry
- Processing
- Agriculture

### OPERATING CAPABILITIES

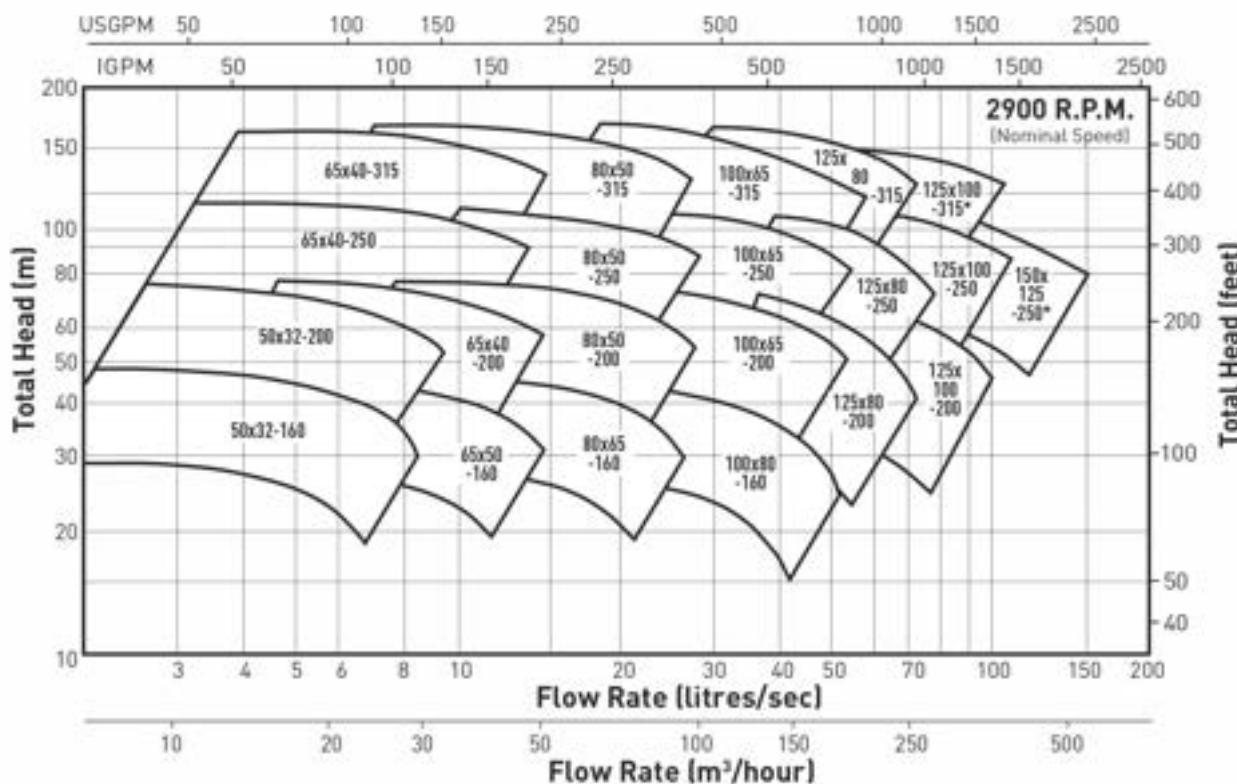

Capacity	490 m³/h
Head	Maximum 160 metres
Liquid Temp.	0°C to + 100°C Up to 140°C with high temp. seals
Pumped Liquid	Clean Water

### DID YOU KNOW?

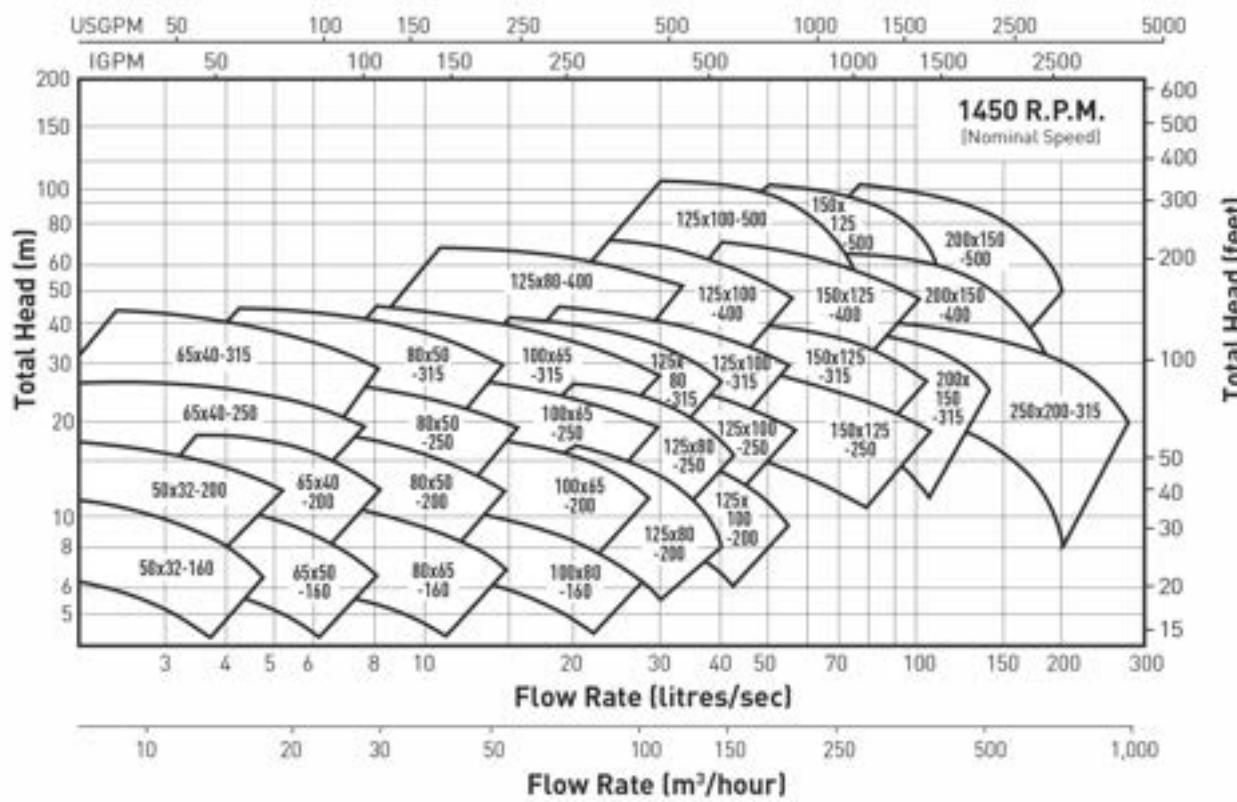

Not every size of this pump is shown in the catalogue...

Call 1300 225 786 to discuss your requirements.

## Performance Data

\* ISO-PRO Pumps [ISO5199 Standard] required to operate these models [125x100-315 & 150x125-250] at 2 pole speed.

**HYDROTMAX ISO SERIES**

Quality - ISO - SANI - South Africa - Centrifugal Pumps

## Material Specifications

SYMBOL	MATERIAL	SPECIFICATION	COMPONENT WHERE USED
CI	Cast Iron	AS 1830/T260 Equivalent Standards: BS 1452 (1977) Grade 260 ANSI 625.1 Class 40 ASTM A48 Class 40	Bearing Housing Bearing Cover Volute Casing Backplate Impeller
ZF	Zinc Free Bronze	AS 1565/C90250 Equivalent Standards: BS 1400 PB3, ISO 1338 CU SN 10	Volute Casing Backplate Impeller Wear Rings
SS	Cast Stainless Steel		
		AS 2837/431 Equivalent Standards: BS 970 Grade 431 S29 ASTM A176 543100	Shaft
	Wrought Stainless Steel	AS 2837/316 Equivalent Standards: BS 970 Grade 319S16 ASTM A240/S31609	Shaft Impeller Washer Impeller Nut Casing and Discharge Flange Plugs
	316 SS	AS 2548 Gr. A4-80	Bolts and Setscrews (ZF and SS only)
	2205 Duplex SS	UNS S31803 ASTM A276-98b	Impeller Key
MS	Mild Steel	AS 1204/250	Support Foot
HT	High Tensile Steel	AS 1110 Gr. 8.8	All Bolts and Setscrews
Mild Steel Zinc Plated			Casing and Discharge Flange Plugs
Key Steel			Drive shaft key

## Painting

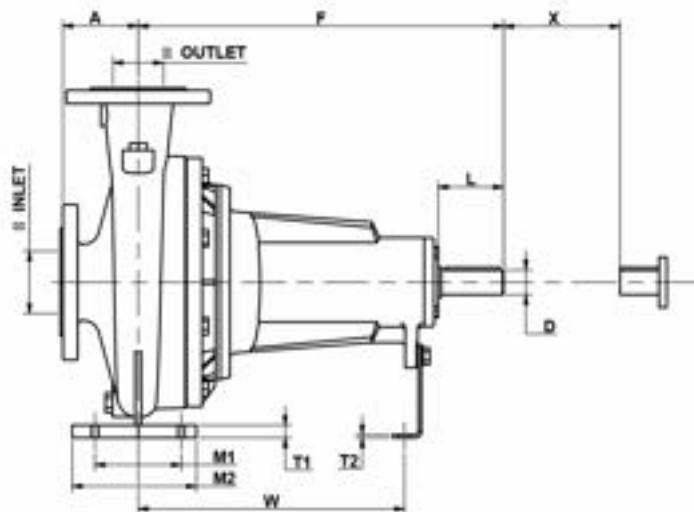

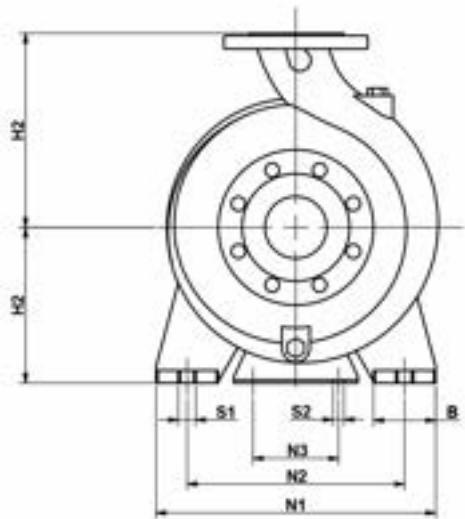

One Coat – Wattyl Super Etch Grey Primer (Wattyl Part No. 123907)  
 Two Coats – Wattyl 517 Hammer Finish Green (Wattyl Part No. 151741)  
 Colour – Hammer Finish Green

## **GRISWOLD™ ANSI SERIES**

### Are all ANSI Pumps The Same?

In 1977, the American National Standards Institute (ANSI) established manufacturing criteria for centrifugal pumps to ensure that dimensional, material composition and safety specifications meet the demanding needs of the chemical processing industry.

Mandatory design features, such as self-ventilation, foot mounting, centreline discharge and back pullout, became the industry's assurance that complying pumps met production and safety needs.

Even though ANSI compliance would seem to level the playing field for pump specification, your choices are actually far more complex. The fact is that many brands just meet the minimal requirements of this standard. And while other brands may offer similar features and performance, you may experience inflated cost, delayed delivery, and deflated service. In a market where all ANSI pumps seem the same, dare to compare.

### GRISWOLD: Anything But Standard

The Griswold Pump Company is no newcomer to pumps. With product lines dating back over 70 years, you'll find a wealth of industry knowledge and experience behind every Griswold product. At our facility in Thomasville, Georgia, we manufacture a variety of pumps, including ANSI, end suction centrifugals, self-priming and submersible/vertical turbines. With hundreds of thousands of pump installations worldwide and our international distribution network, Griswold serves a broad range of chemical process, industrial and municipal applications, including: Pulp and paper, Chemical Petrochemical, Oil and gas, Textile, Breweries, Grain processing, Food processing, Poultry processing, Automotive, Pharmaceutical, Steel, Semiconductor, Water treatment and Power generation.

### Extended Equipment Life

Exceeding standard ANSI construction requirements, the Model 811 includes several additions that are critical to long-term reliable function. To start, our superior open impeller and seal chambers are designed to facilitate corrosive and erosive substance transport, heat regulation and routine maintenance. The 811's range of enhanced power frames and rigid base plates combine the latest technology with the highest quality construction to minimise the effects of work forces and shaft deflection, optimise cooling and further simplify the installation and maintenance process. All told, you can expect the 811 pump series to continue performing long after other ANSIs wear out or break down.

### Proven Track Record Of Performance:

The Griswold 811 ANSI line offers the best pumps you'll find on the market. Engineered for exceptional performance and maximum flexibility, our 811 models go the mile in the harshest and most difficult fluid processing applications. Griswold's 811 centrifugal pump not only meets ANSI standards for chemical processing, it was among the first pump designs to comply with these standards in the 1970s. Almost 30 years of proven performance has enabled Griswold to focus on enhancing our ANSI pump features and support offerings to surpass the industry standard and exceed our customers' expectations.

#### DID YOU KNOW?

An ANSI Pump is commonly referred to as a "Griswold"

## Reduced Initial And Total Cost Of Ownership:

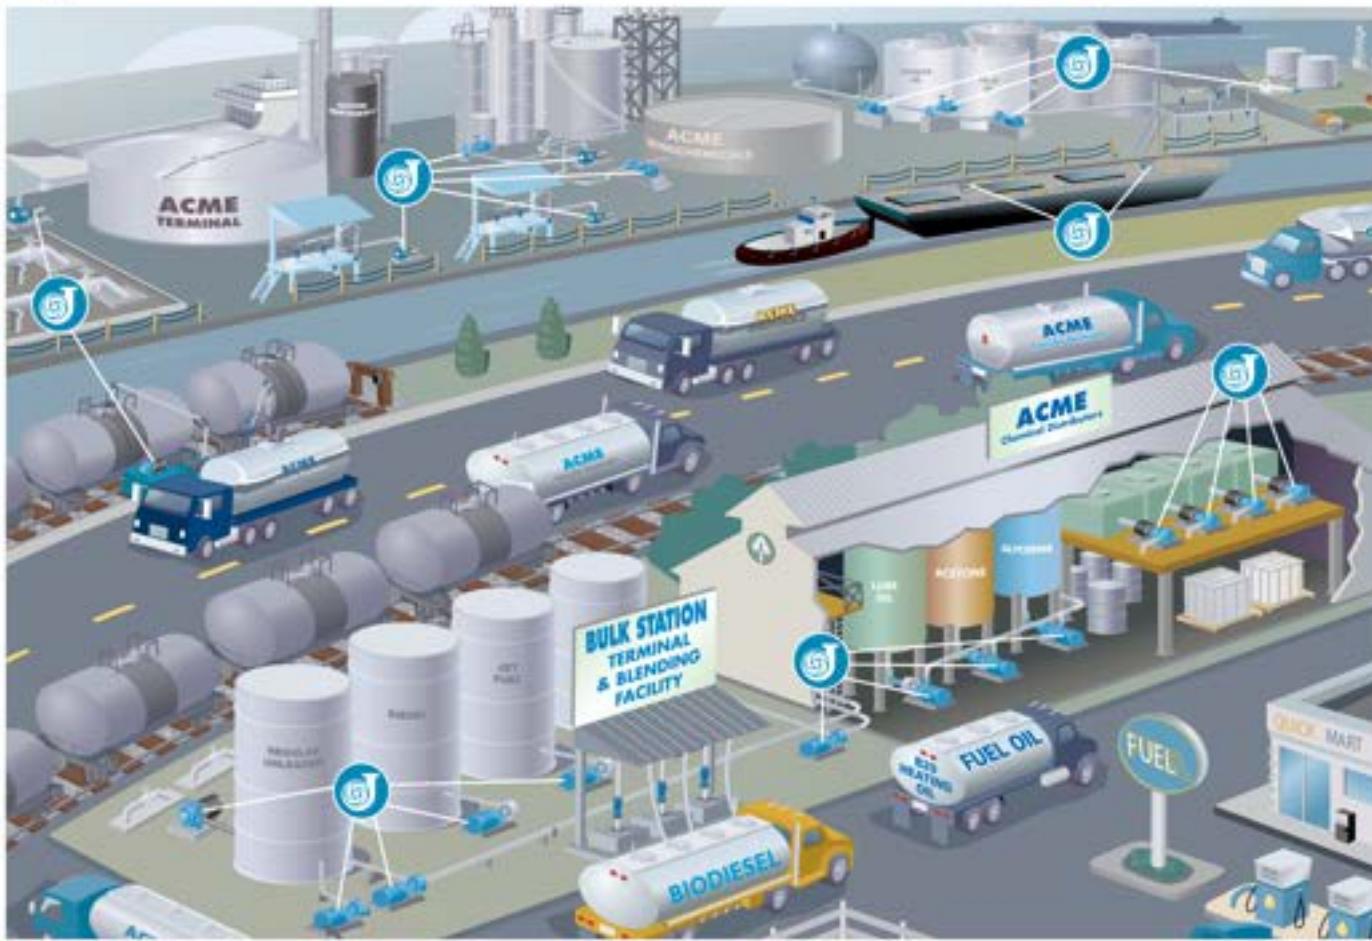

You may have heard that the initial cost of your pump and parts plays a minor role in your total cost of ownership. NOT TRUE! With Griswold's 811, you get identical quality and longevity as the best-known brands—at a lower initial price. Factor in our low cost on parts, and your long-term savings are even greater! This translates into your LOWEST total cost of ownership.

## Reduced Initial And Total Cost Of Ownership:

When meeting your production quota is compromised, each day waiting for repairs can mean significant losses in revenue (another factor in your true cost of ownership). The Griswold 811 and our extensive inventory of parts are 100% interchangeable with hundreds of other ANSI pumps currently in use. With stocking distributors from coast-to-coast and throughout the world, backed by Griswold's 36 hour ship commitment (same day on parts), and NO premium charge for expedited shipment, you can be up and going before you may even get a response call from our competition!

And with our dedication to customer service, reduced response times and engineering support, Griswold stands ready to help improve your process, increase your productivity, lower your costs and reduce your stress.

## Applications

**GRISWOLD<sup>®</sup>** **ANSI SERIES**

## Engineered For Flexibility And Durability

The Model 811 is available in a wide range of sizes, capacities and materials to fit virtually any process fluid application. With over 30 selections and multiple design options, we've got your application covered—for abrasive and corrosive substances, and capacities ranging from 4 through 4000 gallons per minute.

Griswold maintains strict quality assurance programs to ensure that our entire product line is manufactured to the highest standard for engineered tolerances:

- Our American produced investment and no-bake casting processes produce smooth, superior surface finishes for consistent and reliable performance.
- A metallurgist controlled annealing process assures the maximum durability and product life available on the market.
- CNC (computer numerically controlled) machining equipment guarantees consistency for all parts.
- All power frames are assembled and inventoried in our Clean Room to keep sensitive bearings and internal components contaminant-free.

ITEM NO.	DESCRIPTION		
1	Labyrinth Seals Standard	INPRO® oil seals keep outside contaminants from lubrication media, significantly extending bearing life. Standard in bronze. Carbon-filled Teflon® and magnetic face seals optional.	
2	Ductile Iron Frame Adapters	Ductile Iron construction provides strength and safety. Precision-machined fits accurately align the liquid end to the power end. Large openings simplify installation and maintenance. Includes jacking bolts to facilitate disassembly.	
3	Mounting Frame Flange	Machined to accommodate C-face motor adapters. In close coupled configurations.	
4	Extra Large Capacity Powder-Coated Oil Sump	Maximised oil capacity delivers improved heat transfer and oil temperature, greatly extending bearing life. Designed to accommodate optional fin coolers for higher temperature applications. Impenetrable fusion bonded epoxy coating on interior surface extends quality, cleanliness and longevity of the lubricating oil.	
5	External Clearance Adjustment	For maintaining original flow, pressure and efficiency, minimising energy consumption and repairs, and extending mean-time-between-failures (MTBF).	
6	Heavy-Duty Shaft and Bearings	Engineered to minimise vibration and shaft deflection, less than 0.002 inch per ANSI B73.1, optimising pump life. Sleeved and solid shaft available in a variety of materials. Bearings sized for 10-year life under tough operating conditions.	
7	Oversized Sight Glass	One-inch bulls eye reflective sight glass facilitates monitoring oil level and condition, critical to bearing life. Bottle oiler optional.	
8	Magnetic Drain Plug	Collects damaging metallic contaminants away from the bearings.	
9	Contained Casing Gasket	Provides positive sealing at casing joint to prevent "blow out" of liquids and to facilitate disassembly.	
10	Sealing Flexibility	Wide range of sealing options coupled with seal chambers and stuffing boxes selected for service condition to improve lubrication and heat dissipation of seal faces, maximising pump uptime.	
11	Fully Open Impeller	With double the wear area of enclosed models, the 811 impeller offers superior handling of solids, corrosives and abrasives. Back pump-out vanes reduce hydraulic loads and seal chamber pressure.	
12	Extra-Heavy Casings	Class 150 pumps incorporate Class 300 wall thickness as standard, extending reliability and casing life under severe corrosive/erosive conditions: <ul style="list-style-type: none"> <li>• Top centreline, self-venting discharge for air handling</li> <li>• Back pull-out to simplify maintenance</li> <li>• Rigid casing feet prevent pipe load misalignment and promote seal /casing life</li> <li>• Discharge connection for pressure gauge or seal bypass flush connection standard on Ductile Iron and Stainless Steel casings</li> <li>• Class 150 FF standard for positive sealing. Optional Class 150 RF 300 FF/RF available</li> <li>• Casing drain standard in Ductile Iron and Stainless Steel for simplified maintenance.</li> </ul>	

## Optimise Your Pump Replacement Process

Challenge your existing equipment quality, delivery and costs with Griswold's ready-to-ship inventory of 811 pumps and parts. Our high-quality, ANSI-compliant pumps and wearing parts will interchange quickly and seamlessly with a variety of ANSI pump models and brands – without piping, baseplate or coupling changes. All at a significant cost savings!

Factor in our NO PREMIUM 36-HR SHIP COMMITMENT on pumps and SAME-DAY SHIPPING on parts, and you'll save money, simplify ordering, reduce inventory and expedite line repair.

### Interchangeability Guide

All 811 parts, from end to end, are 100% interchangeable with many ANSI pumps.

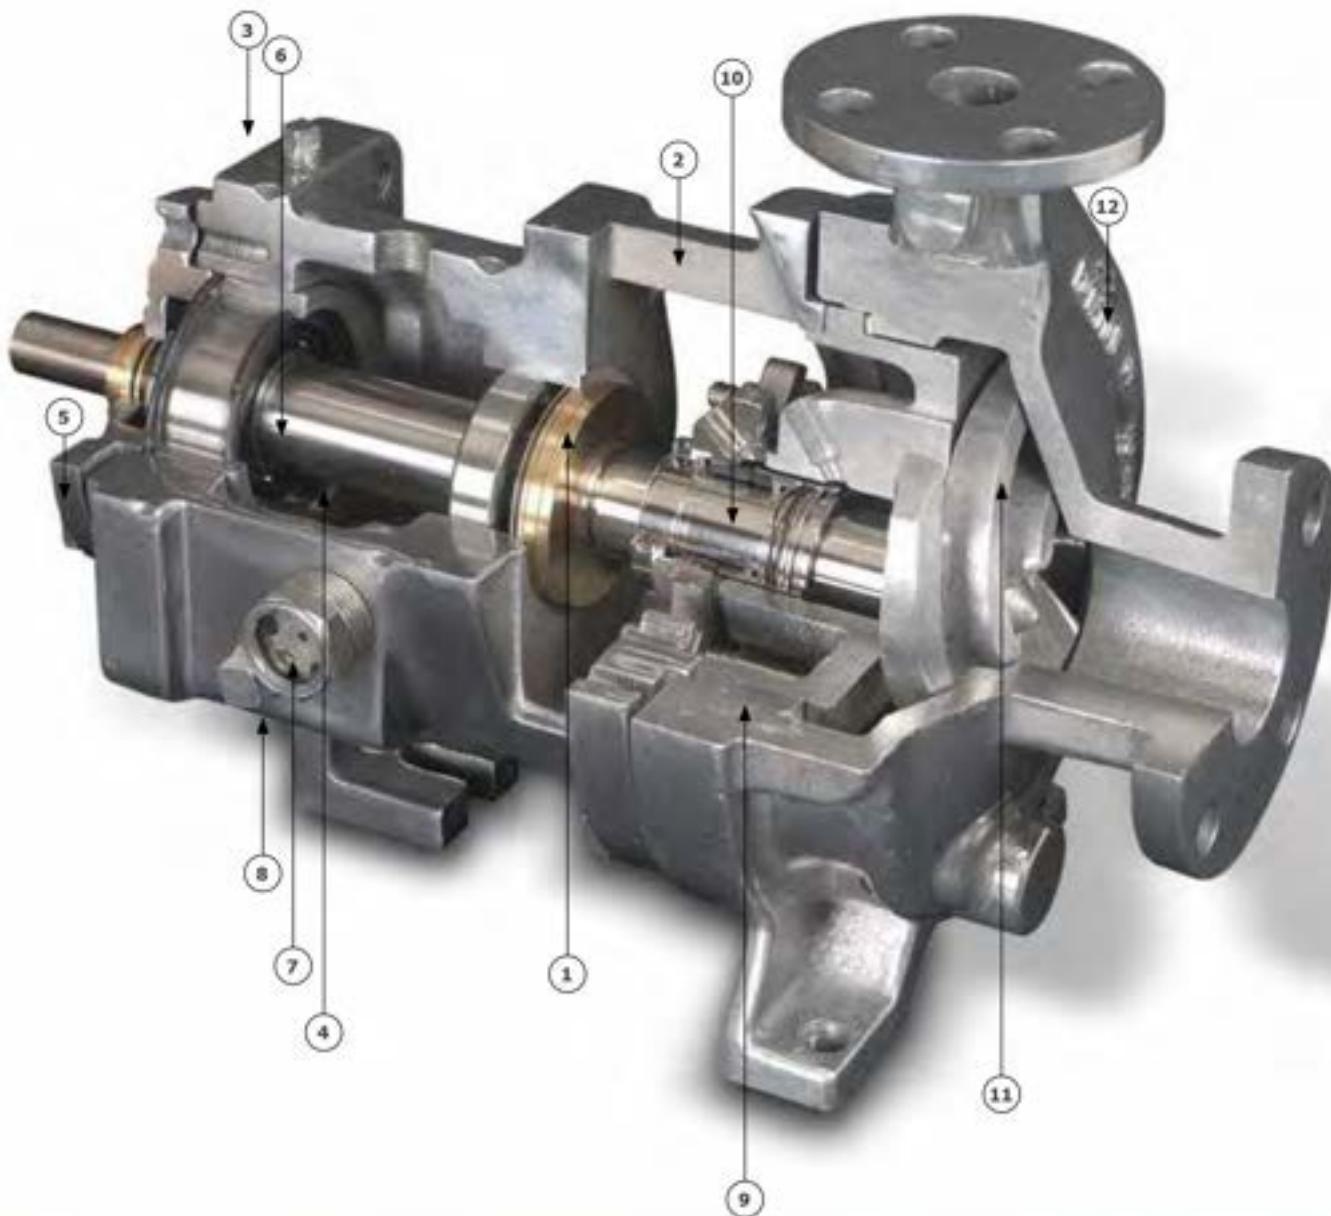

#### Interchangeable with:

##### PUMPS

Ductile Iron pumps, Stainless Steel pumps, Alloy 20 pumps, CDHMCu pumps

##### PARTS

Bearings & seals, Cases, Impellers, Power frames, Shafts & sleeves, Stuffing boxes, All other parts for ANSI pumps

# **GRISWOLD® ANSI SERIES**

## Seals To Fit Any Application

**Cartridge Seals, Component Seals & Conventional Packing.** With Griswold's broad selection of seals, you can accommodate most any fluid and temperature for demanding chemical, petroleum, pharmaceutical and general industry applications. Our engineers can recommend the best seal to maximise your application and system life—including cartridge or component, single or double, inside or outside, balance or unbalanced seals or conventional packing.

<b>SEAL SELECTION</b>	
<b>Single Inside Seal</b>	For non to moderately corrosive liquids, moderate abrasives and liquids with good lubrication qualities.
<b>Conventional Double Seal</b>	For liquids that are incompatible with single seals, cavitation or low flow situations. Meets environmental regulations for toxic, hazardous, abrasive and corrosive substances.
<b>Single Cartridge Seal</b>	For same applications as conventional single seals, allowing simplified seal setting and maintenance.
<b>Double Cartridge Seal</b>	For same applications as conventional double seals, allowing simplified seal setting and maintenance.
<b>Double Gas Barrier Seal</b>	Meets environmental regulations for toxic or hazardous materials. For use when seal pot or external flush is not desirable or when compatible seal flush liquid is not available.

**3-YEAR Whole Pump Warranty.** All 811 pumps are backed by a 3-YEAR unconditional guarantee against defects in material and workmanship.

## Increased Capability For Reduced Volumes

Standard ANSI pumps (with expanding style volute casing) are not designed for low flow, high head applications: the excessive radial loads and shaft vibration experienced can shorten bearing and seal life. Griswold's Model 811LF series is designed with a circular concentric casing in conjunction with a radial vane impeller to reduce those excessive radial loads and minimise shaft deflection, thus extending MTBPM.

### Circular Concentric Volute Casing

The fully machined concentric volute reduces excessive radial loads experienced in low flow, high head applications. Shaft vibration and deflection are minimised, extending bearing and mechanical seal life.

Class 150 raised face flanges are standard with the Model 811LF series for positive sealing. Class 300 raised face flanges are available as an option.

### Low Flow Radial Vane Impeller

Griswold's radial vane impellers are specially designed to reduce the thrust load and seal chamber pressure normally associated with low flow applications. When operating in reduced volume conditions, the low flow impeller's vanes provide better hydraulic control than traditional ANSI impellers. Balance holes reduce both axial thrust and seal chamber pressure, extending bearing and seal life.

### Retrofitting

Griswold Model 811LF pumps are ANSI dimensional, so they can be installed without piping or base changes to existing equipment. In fact, since all other parts and features are identical/interchangeable within the entire 811 ANSI line, the 811LF case and impeller can be easily retrofitted to an existing Griswold pump as well as 100,000s of other ANSI pumps already in service!

#### SIX 811F MODELS

LF11/2 x1-8	@1750RPM
LF11/2 x1-8	@3500RPM
LF2x1-10	@1750RPM
LF2x1-10	@3500RPM
LF 3 x 1 <sup>1/2</sup> -13	@1750RPM
LF 3 x 1 <sup>1/2</sup> -13	@3500 RPM

#### 811LF CAPACITIES

4 GPM to 210 GPM
Heads to 920'

## **GRISWOLD<sup>®</sup>** ANSI SERIES

### High And Low Temperature Capability

- **Heat Jacket:** Clamps on to the casing to manage heat transfer. Easy to install or remove for servicing.
- **Jacketed Seal Chamber:** Maintains temperature control for heating or cooling of sealing environment.
- **Bearing Frame Finned Cooler:** Directly cools oil to lower bearing temperature. Recommended for temperatures over 350 degrees.

### Seal Flush Plans

We offer all ANSI B73.1 seal flush and cooling plans to control emission levels, improve lubrication and cooling of the seal faces, and reduce down-time. Ask us to assist you in selecting the best plan.

### Lubrication Options

811 power ends accommodate all lubrication systems, including flood oil, oil mist and grease lubrication. Our power ends are pre-drilled for all lubrication methods and can be easily converted in the field without modification.

### Special Surface Preparation

Griswold offers a variety of optional surface preparation processes for extended corrosion protection and contaminant-free pumping:

- Electro Polishing
- Passivation
- Hard Metal Coatings
- Fusion Bonded, Epoxy Coated Power End
- Special Paint Systems

## Enhanced Power Frames

- INPRO® Labyrinth Oil Seals.**

Our high-quality oil seals keep outside environmental contaminants from entering your lubrication media, greatly extending bearing life—available standard in bronze, and optional in Carbon-filled Teflon® or magnetic seal face.

- Large Sight Glass.** Our one-inch bulls eye sight glass simplifies oil level and conditions monitoring, critical to bearing life.

- Large Oil Sump & Oversized Fill Plug.** Increased oil capacity maximises heat transfer for reduced oil temperature. Our extra large 1/2" NPT oil fill plug further simplifies the lubrication process. Designed to accommodate optional fin coolers for higher temperature applications.

- Powder Coated Oil Sump Lining.**

Griswold utilises a "Fusion Bonded Epoxy Coating" on the interior surface of the power frame to provide an impenetrable barrier between the iron frame and oil, enhancing the long-term quality and cleanliness of the lubricating oil.

- Improved Strength & Rigidity.** The superior tensile strength of both our cast and ductile iron makes Griswold power frames not only stronger than the competition's (as much as 33%), but also more rigid—and better equipped to withstand forces and moments experienced in today's process applications.

- Heavy-Duty Shaft & Bearings.** Our shaft is engineered for heavy-duty loads and for minimum vibration and deflection at seal faces (less than 0.002 inches per ANSI B73.1), extending bearing and seal life. Using only the highest-quality bearings further optimises the 811's performance and reliability. Both shaft and bearings are rated for 10-year average life under tough operating conditions. Standard hook-type sleeved design meets ANSI shaft deflection standards and provides ease of maintenance. Solid shaft design available for more demanding applications. Both are available in a variety of materials.

- Hook-Type Replaceable Shaft Sleeve.** The 811's hook-type shaft sleeve is free to expand with temperature changes and promotes renewal of the sealing surface without bearing and shaft disassembly.

- Magnetic Drain Plug.** Our drain plug is designed to magnetically collect damaging metallic contaminants away from the bearings.

- Monitoring Locations.** Each power frame is machined with 4 condition-monitoring sites to facilitate consistent checking of vibration and temperature.

- Clean Room Assembly.** All sizes of our power frames are assembled in Griswold's climate controlled, sealed, clean room which filters out airborne dirt and debris that might otherwise contaminate sensitive bearings and internal components. We also inventory all finished power frames and associated components in this ultra clean environment to ensure the most reliable power frame you can buy.

# **GRISWOLD® ANSI SERIES**

## Power Frame Upgrade

- 811 L: The 811 is offered in a larger frame that is ideal in high-load applications or when conditions push the power frame beyond ANSI limits. The 811 L features an oversized rotating assembly and higher radial and thrust load carrying bearings. Duplex angular contact bearings ensure zero end play for improved sealing and maximum mechanical seal life. Whether pumping viscous liquids or high specific gravity liquids, fluctuating process conditions, or pumping high heads or low flows, our 811 L power frame guarantees maximum pump life in your toughest applications.

Increases Performance     Simplifies Maintenance     Increases Longevity

## Heavy Duty C-Face Motor Adapter

- Optional C-Face Adapter: Our C-Face motor adapter bolts directly to the precision machined fit on the power frame. Register fits on both ends of the adapter lock in a standard C-Face motor, guaranteeing both parallel and angular alignment. This quick, yet precision installation minimises time spent aligning shaft couplings, and eliminates seal and bearing replacements caused by misalignment. Best of all, our C-Face adapters—like the rest of our parts—are directly interchangeable with most ANSI pumps!

### POWER FRAME STANDARD FEATURE COMPARISON

	Griswold	Competition
Magnetic Drain Plug	YES	No
INPRO® Lab Seals	YES	No
Epoxy Coated Interior	YES	No
Clean Room Assembly	YES	No
Cast Iron Tensile Strength <small>HOT, LTD, RLD Frames</small>	30000 lbs	20000 lbs
Ductile Iron Tensile Strength <small>STD Frame</small>	65000 lbs	60000 lbs

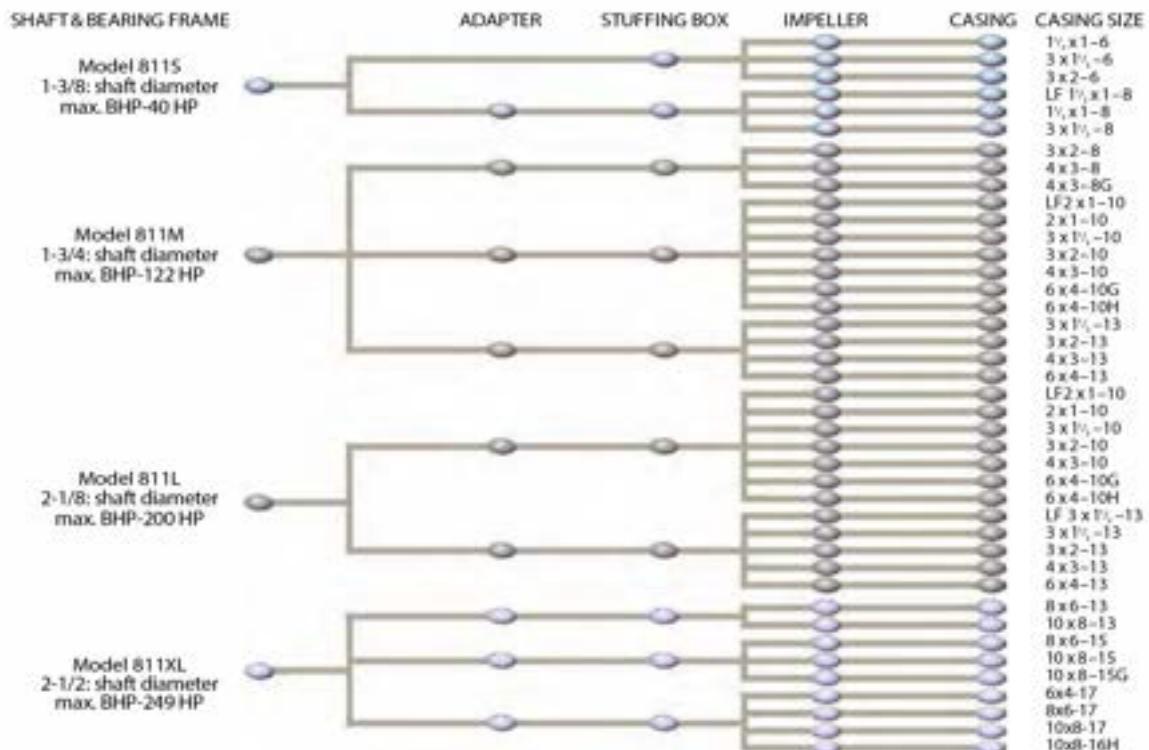

- Back Pump-Out Vanes reduce pressure on the shaft seal and axial thrust on the bearings. Maintenance is further simplified—extending bearing life, seal life and performance.
- Investment Cast Impellers: ultra-smooth, consistently cast investment impellers are standard on Stainless Steel, CD4MCu and Alloy 20, and optional on Ductile Iron pumps. This feature improves hydraulic and mechanical balance, maximises seal and bearing life and improves efficiency.

## Component Interchangeability

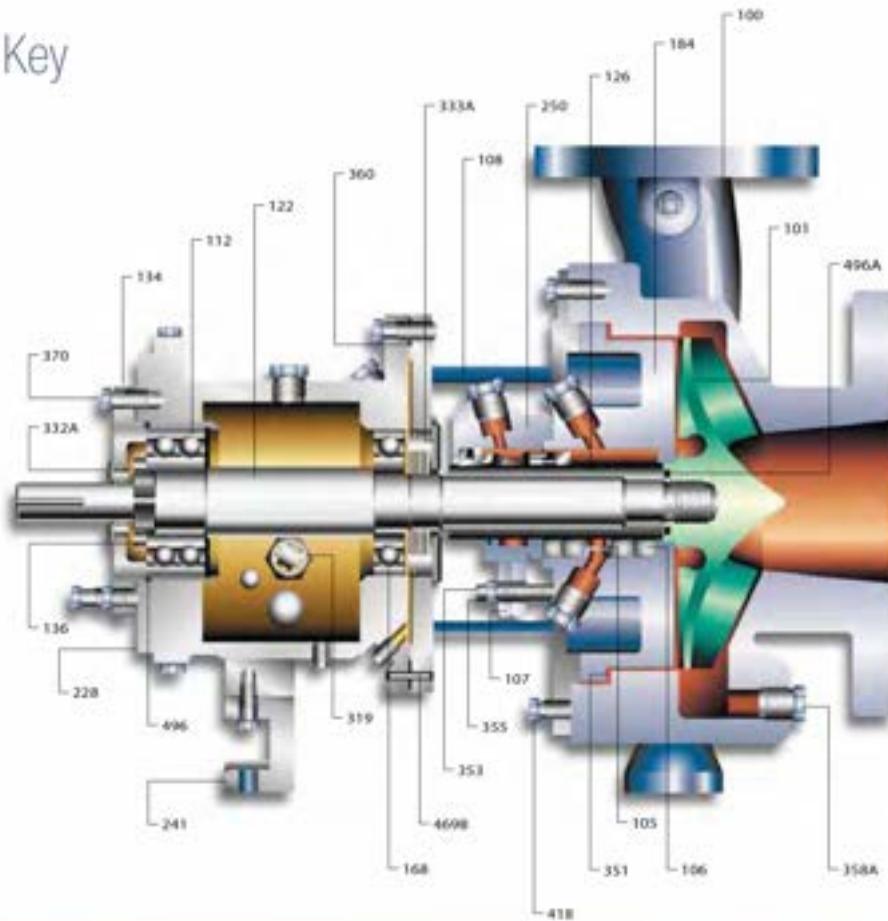

# **GRISWOLD® ANSI SERIES**

## Seal Chambers And Sealing Flexibility

Our quality seal chambers are engineered to provide optimum seal environment for heat dissipation, solids, entrapped air and vapour. Oversized seal chambers increase radial clearance between the mechanical seal and seal chamber, as well as provide better circulation of liquid to and from the seal faces, preventing failure of the shaft seal. A variety of flush plans are available for additional lubrication and cooling of the seal faces.

	STANDARD BORE	LARGE BORE	TAPERED BORE
<b>Services</b>	Services utilising packing or mechanical seals. For mild fluid at ambient temperatures.	Most services including those with solids greater than 10%. Increased radial clearance between seal & chamber for improved liquid circulation, lubrication & cooling.	Services up to 10% solids or those containing entrained air or vapours. For lower seal face temperatures, self venting & draining. Circulates solids & vapours away from seal faces.
<b>Sealing flexibility</b>			
Packing	Most Services	Not Available	Not Available
Single Seal/No Flush	Not Recommended	Not Recommended	Services with Solids up to 10%

## Description

HDM series pumps are closed coupled, end suction centrifugal pumps. Designed according to EN733/DIN24255 standard for interchangeability. Pump is suitable to be coupled with both NEMA and IEC designed motor by a stub shaft that will eliminate time consuming alignments.

These pumps eliminate costly couplings and the alignment problems sometimes associated with long coupled models. In addition, users have the choice of a range of construction materials, pump discharge positions and large operating range. HDM Series End Suction Pumps are designed and engineered to be easily serviced with their back pull-out design. This allows removal of the motor/impeller module without disturbing pipework.

## Design Options

**Standard Design** - HDM Series close coupled motor pumps have a cost saving advantage over traditional long coupled centrifugal pump and motor sets.

**Operating Temperatures** - With standard mechanical seal - minus 20°C to +100°C. Mechanical seals are available for applications outside these limits.

**Operating Pressures** - Maximum operating pressure 1600kPa. Maximum test pressure up to 2100kPa. (Maximum pressure will vary depending on particular pump model - higher ratings available on application).

**Maximum Speed** - Maximum direct coupled speeds for HDM series pumps vary between 3600rpm and 1800rpm depending upon pump size.

**Back Pull-Out Design** - All HDM series pumps incorporate the "Back Pull-Out" design allowing the removal of the complete rotating element without disturbing the pipe work. This feature enables quick and simple maintenance to take place.

## Material Options

## Applications

- Air-conditioning
- Heating and Ventilation
- Refrigeration
- Fire protection
- Plumbing
- Circulation
- Transfer
- Irrigation
- Drainage
- Water Pressure Boosting
- Process industry
- Petrol IUM products
- General industry
- Food and drink manufacture
- Water treatment & supply
- Cooling towers

## Features

- Compact close coupled motor pump design.
- Superior hydraulic design and manufacturing methods for significantly higher efficiencies and reduced maintenance.
- High efficiency double curvature impeller vanes.
- 32 to 200mm discharge.
- Cast iron, zinc free bronze or stainless steel construction.
- AS2129 Table "E" flanges as standard with optional drillings available.
- Back-pullout design does not require the disconnection and removal of suction and discharge lines for maintenance.
- Choice of high quality WEG TEFC IP55 motors with sealed for life (11kW and under) or regreasable (15kW and over) motor bearings.
- Taper mounted and keyed impeller.
- Horizontal or vertical pump discharge mounting.

### OPERATING CAPABILITIES

Capacity	Maximum 250 Litres/sec
Head	Maximum 160 metres
Liquid Temp.	0°C to + 100°C Up to 140°C with high temp. seals
Pumped Liquid	Clean Water

### Options

- Wear Rings
- Mechanical Seals or Packed Gland Seal Paint and Internal Coatings Materials of Construction
- Flange Drillings
- Works Certified and Witness Testing Impeller Turndowns
- Pressed or Welded Baseplates

### Applications

- Industry
- Building Services
- Irrigation
- Processing
- Mining
- Agriculture

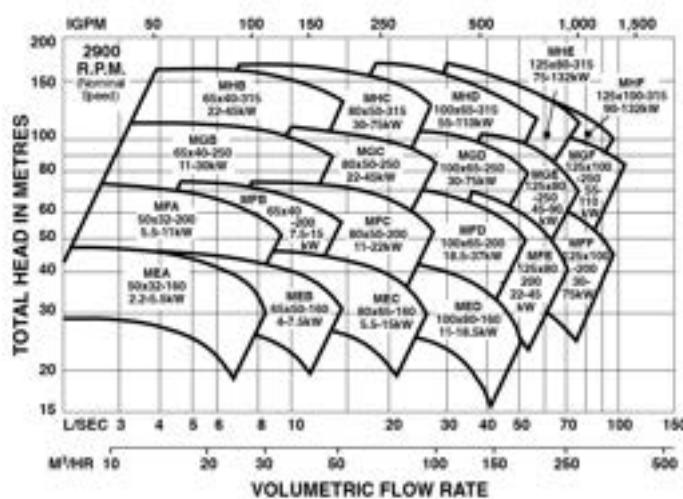

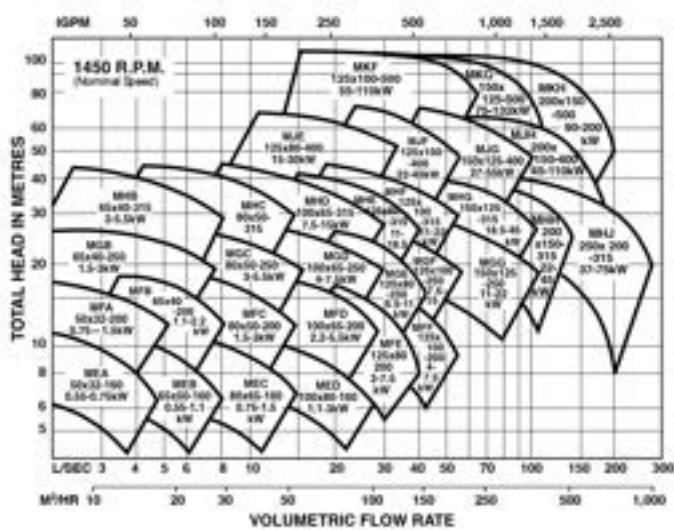

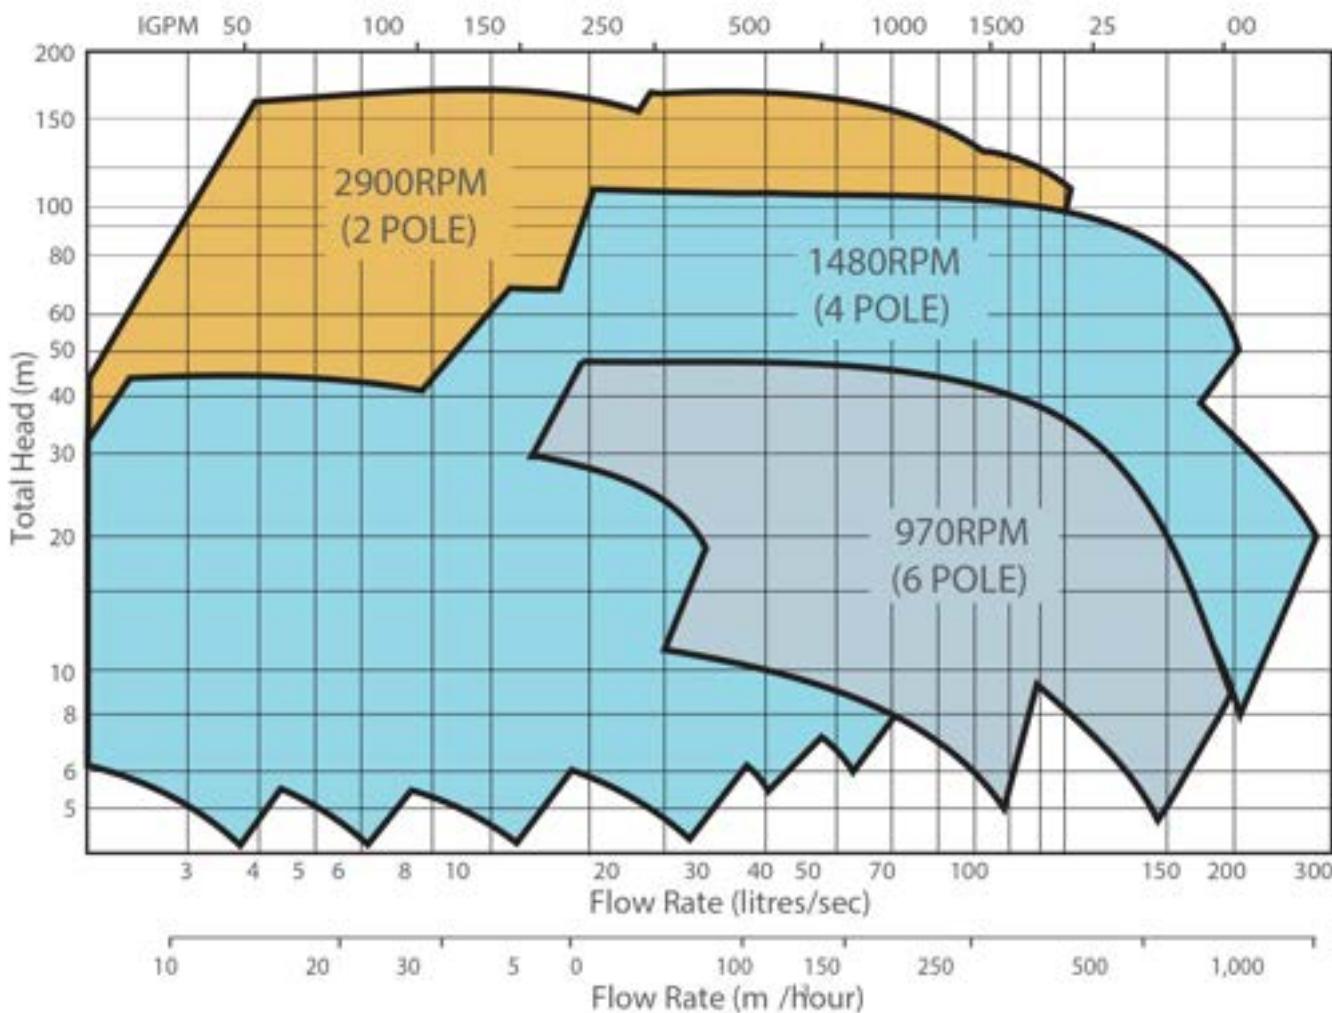

DESCRIPTION	MATERIAL	OPTIONAL MATERIAL		
Volute Casing <sup>1</sup>	Cast Iron	Zinc Free Bronze	316 Stainless Steel

Backplate <sup>1</sup>	Cast Iron	Zinc Free Bronze	316 Stainless Steel	
Impeller <sup>1</sup>	Cast Iron	Zinc Free Bronze	316 Stainless Steel	
Shaft Key	Key Steel			
Bearing Housing	Cast Iron			
Shaft	434 Stainless Steel	316 Stainless Steel	SAF 2205	
Support Foot	Mild Steel			
Casing Plug	Mild Steel Zinc Plated	Zinc Free Bronze	316 Stainless Steel	
Impeller Key	Key Steel			
Casing O-Ring	EPDM	Viton	Nitrile	
Gland Flushing Plug <sup>1</sup>	Cast Iron	Zinc Free Bronze		
Mechanical Seal <sup>1</sup>	C/Cer/Nitrile	SiC/SiC/Viton		
Packed Gland	Roflon			
Wear Rings	Zinc Free Bronze			

1. Material options only available with Star-Pro pumps.

2. Other material options such as SG Iron Duplex, Super Duplex, Durimet 20, CD4MCu, marine bronze, Ni-Resist and other exotic materials are available on an ETO basis. Contact Pentair Southern Cross or your local Southern Cross dealer for further details.

3. A range of mechanical seals are available including high temperature, hydrocarbon, sea water and other options to suit particular applications and operating conditions.

## Performance

The HydroMax Linebloc Pump is an in-line, close coupled, single stage, centrifugal motor pump. These compact pumps are ideal when space is at a premium and you require a high flow at an economical operating cost. It is most commonly used in movement, however, it is suitable for a broad range of other applications.

The Linebloc utilises a standard off-the-shelf TEFC foot and flanged motor, however, if necessary- special types of motors can be fitted for specific applications. It features a durable cast bronze impeller and is available in a variety of materials.

The Linebloc also features back pull-out which allows for easy maintenance without disturbing the pipework.

## Interchangeability

Many of the Linebloc components are interchangeable resulting in a reduction in spares requirements, and an initial cost saving.

## Motor Options

The design of the Linebloc range means that readily available standard electric motors are used.

Alternatively, a motor to suit your particular specifications can be fitted where special protection classes and enclosures are required, or to suit a certain power supply (i.e. weatherproof, flameproof, 60Hz).

## Applications:

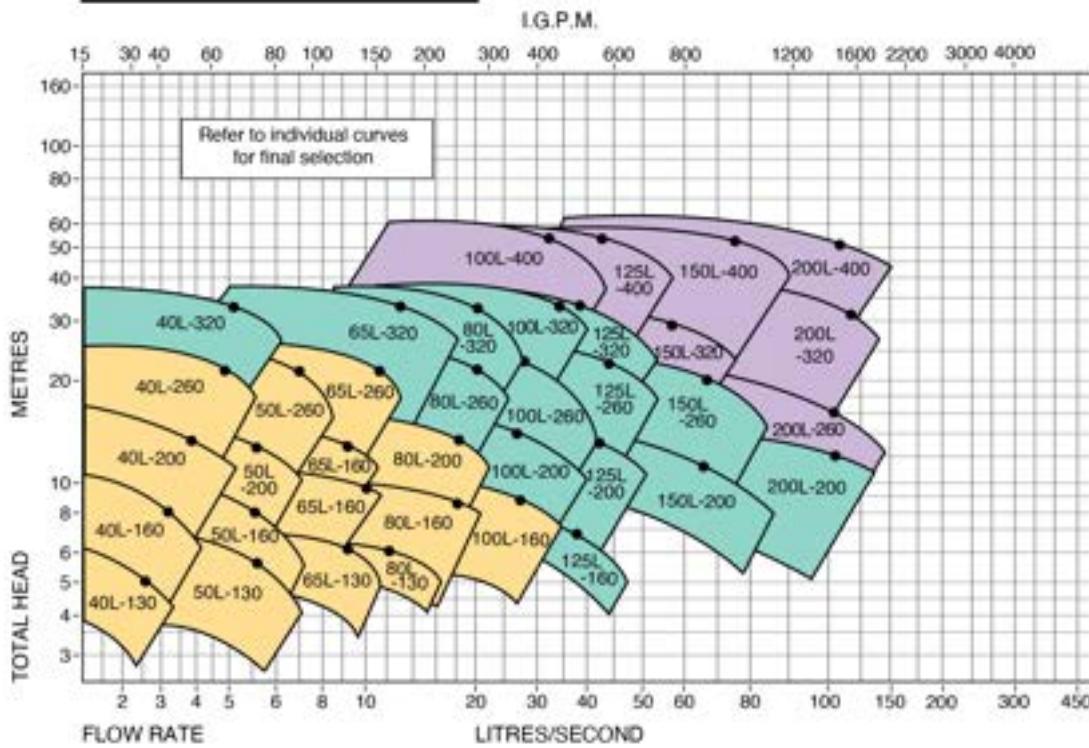

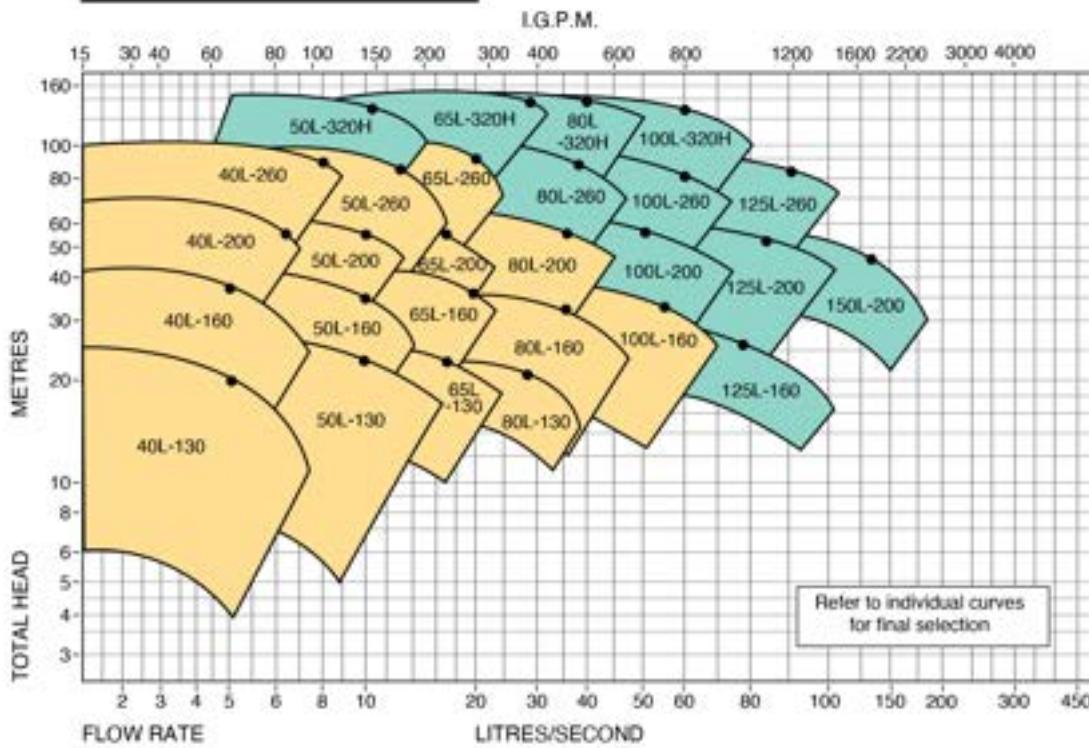

- In-Line Booster
- Recirculation Systems
- Heating Water
- Cooling Water
- Condensed Water
- Applications where floor space is limited

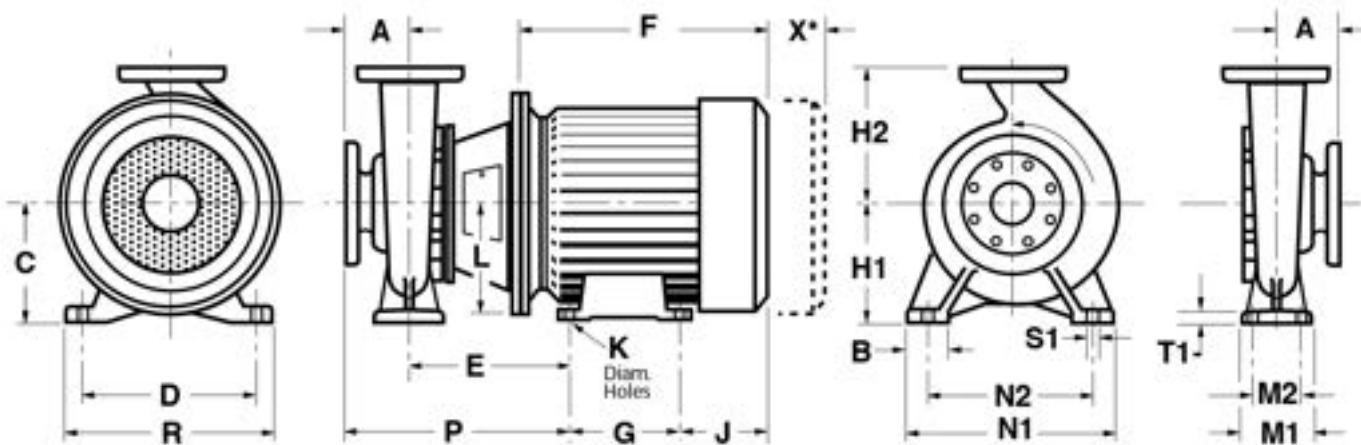

## Material Options

Most combinations of: Cast Iron, Bronze, Zinc-free Bronze and Stainless Steel are available for casings and impellers. Other materials and special coatings available upon request.

## 3LS - STAINLESS STEEL MOTOR PUMP

This series of stainless steel pumps features a unique one piece volute casing that is produced using an advanced computer controlled Plasma stamping system that ensures total quality control during manufacture. With the smooth surfaces of stamped stainless steel, this results in consistent high standard products, of superior quality and high efficiency. (Cast casing on 65-250 & 80 models)

The back pull-out construction permits the disassembly and overhaul of the impeller, mechanical seal and motor without removal of the suction or discharge piping, or pump casing.

The centre line discharge and foot support under the casing ensure maximum resistance to misalignment and distortion from pipe loads.

Standard with high quality silicon carbide mechanical seal  
All the hydraulic and wetted components are manufactured in 316 stainless steel

Stub shaft design Uses IEC standard motors Precision cast casing on 65-250 & 80 models

## Motor Data

- IEC standard 2 pole 50Hz motors (3LS)
- IEC standard 4 pole 50Hz motor (3LS4)
- 3 phase, TEFC, IP55, Class F

## Range

- 1.1 to 55kW - 3 phase (3LS)
- 0.25 to 7.5kW - 3 phase (3LS4)
- 32 to 80mm discharge.

## Options

- Available as pump end kit without motor
- Single Phase motors
- Other motor brands, types, etc. on request.

## TECHNICAL SPECIFICATIONS

Stainless steel pump with closed impeller	
Maximum working pressure	10 bar
Liquid temperature	-10°C to +110°C

## Model Code

3LS 40 - 200 / 7.5 M

M = Single Phase  
Motor Size kW  
Nominal Impeller Diameter mm  
Discharge Size Ømm  
Model; 3LS with motor; 3LSF without motor (kit)

Synchronous Speed:  
3000 r.p.m.

Applicable standard of test:  
ISO 2458

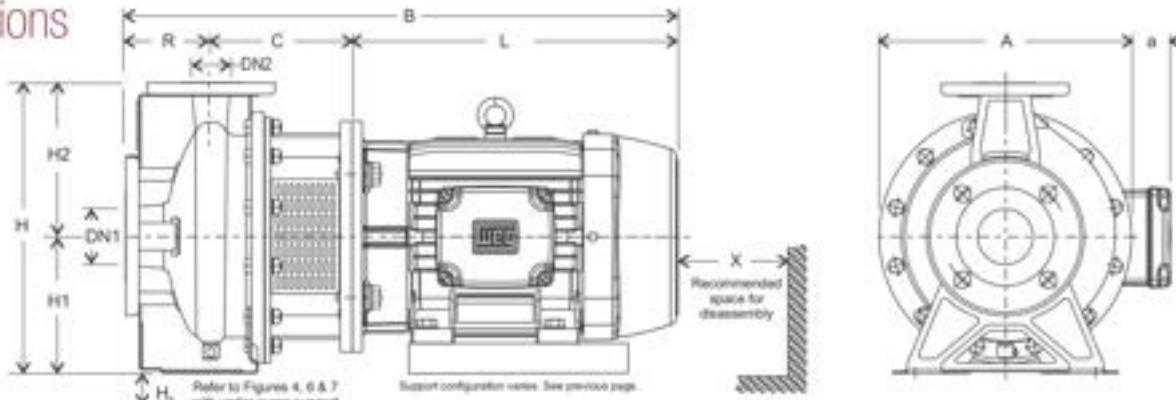

Water temp:  
20°C

Available as pump end kit  
(without motor)

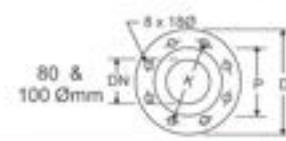

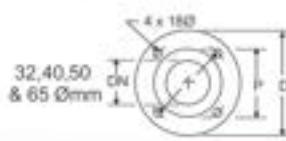

## Dimensions

Dimensions &amp; weights refer to units fitted with standard 3 phase cast iron WEG motors

## Construction

**A** Typical with stamped casing  
(i.e. all 32, 40 & 50mm & 65-125/160/200)

**B** Typical with cast casing  
(i.e. 65-250, 80 all 80)

Note: Mounting and support feet varies between models.

ITEM	DESCRIPTION	SUITS MODELS	MATERIALS
1	Casing	All 32, 40 & 50; 65-125/160/200 65-250; All 80	AISI 316L Stainless Steel - stamped AISI 316 Stainless Steel - precision cast
7	Impeller	All 32, 40 & 50 All 65 & 80	AISI 316L Stainless Steel - stamped AISI 316 Stainless Steel - precision cast
4	Casing cover	32, 40 & 50; 65-125/160/200; 80-160 65-250; 80-200/250	AISI 316L Stainless Steel - stamped AISI 316 Stainless Steel - precision cast
26	O-ring (casing)	All models	Viton
11	Mechanical Seal	All models	SiC/SiC/Viton with anti rotation device for stationary seat
6	Stub shaft	All models	AISI 316 Stainless Steel (Up to 22 kW) Duplex Stainless Steel (30 to 55 kW)
3	Motor bracket	All models	Cast iron

## HYGINOX SE

Self-priming casing

## Application

The Hyginox SE pump is a centrifugal pump manufactured in stainless steel with a shrouded motor. Its sanitary and cost-efficient design makes it perfect for the dairy, beverage, food-processing, pharmaceutical and fine chemicals industries.

## Operating principle

Housed inside the casing, the impeller rotates in conjunction with the pump shaft.

With this arrangement, the impeller blades convey energy to the fluid in the form of kinetic energy and pressure energy.

This pump is not reversible by simple reversal of the direction of rotation. The direction of rotation is clockwise when the pump is viewed from the non-drive end of the motor.

## Design and features

- Casing manufactured with cold-formed plate.
- Hygienic or DIN connections.
- Open impeller manufactured with stainless steel investment casting. Mechanical seal according to DIN 24960 L1K.
- AISI 304 motor shroud.
- Adjustable stainless steel legs.
- IEC B34 motors, IP 55, F-class insulation.

## Options

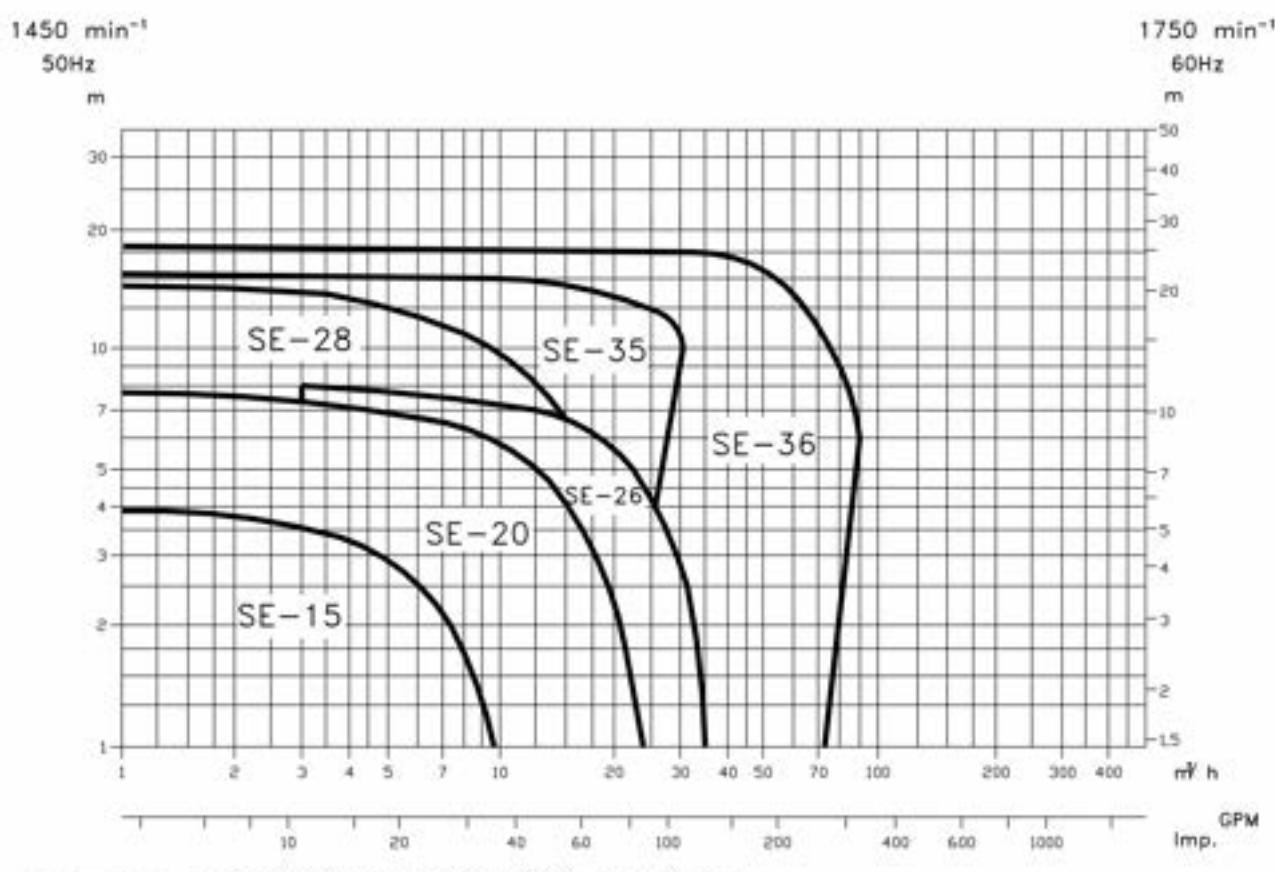

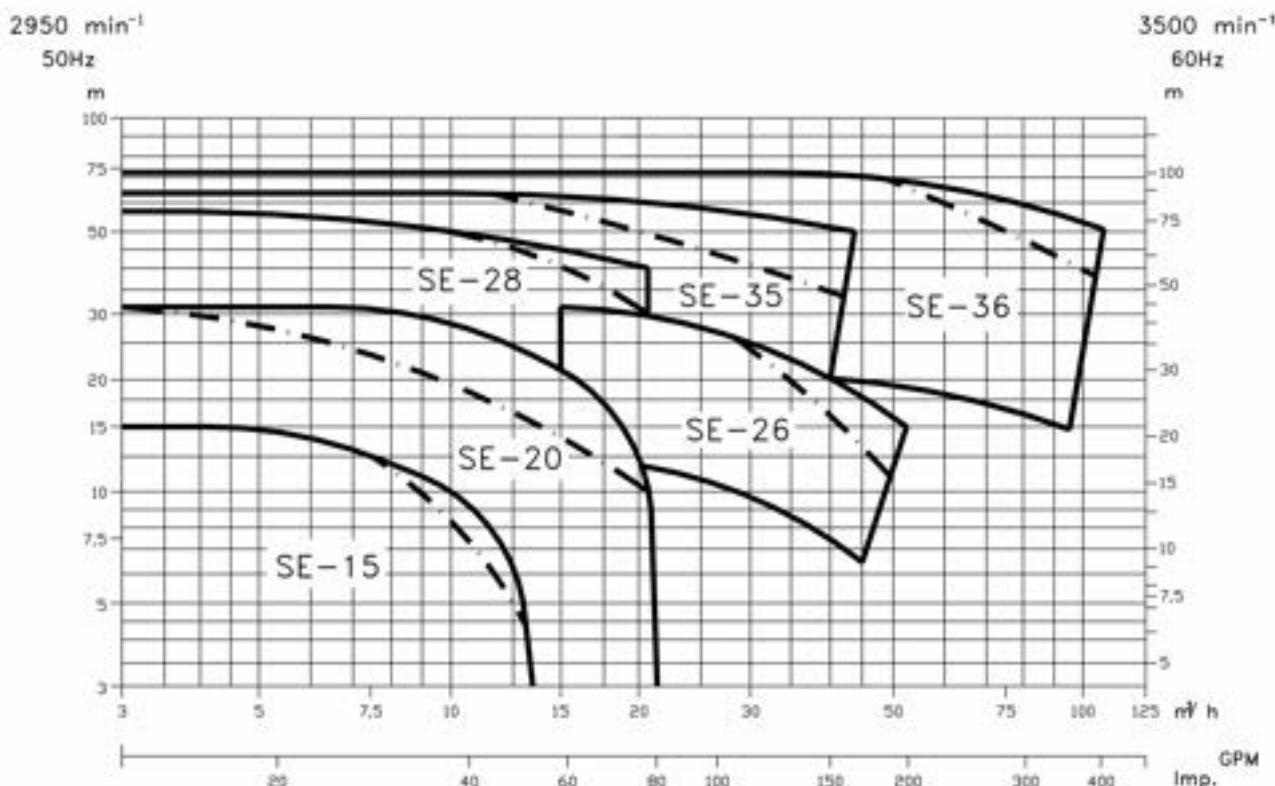

- Mechanical seal in C/St/St and SiC/SiC.
- Gaskets in FPM and PTFE.
- Self-priming casing.
- Drainage connection.
- Connections: Clamp, SMS, RJT, etc.
- Motors with additional protection.
- Trolley and/or electric panel.

## Application

The Prolac S pump is a sanitary centrifugal pump that meets the highest sanitary requirements for use in the food-processing and pharmaceutical industries. Some of its uses include processes in the brewing, dairy and beverage industries in general, and with the appropriate options it can also be used in complex applications such as with evaporators, concentrators, distillation towers, decanting of syrups, and purified-water loops in the pharmaceutical industry.

## Operating principle

Housed inside the casing, the impeller rotates in conjunction with the pump shaft. With this arrangement, the impeller blades convey energy to the fluid in the form of kinetic energy and pressure energy. This pump is not reversible by simple reversal of the direction of rotation. The direction of rotation is clockwise when the pump is viewed from the non-drive end of the motor.

## Design and features

- Casing manufactured with cold-formed plate.
- DIN connections.
- Open impeller manufactured with stainless steel investment casting technology.
- Sanitary mechanical seal.
- Very robust stainless steel cast motor to pump connection.

## Materials

- Parts in contact with pumped media: AISI 316L
- Other parts in stainless steel: AISI 304
- Gaskets: EPDM
- Mechanical seal: St.St/C/EPDM
- Inside surface finishing: Ra < 0.8 µm.
- Outside surface finishing: Mirror polished
- IEC B5 motors (B14 for S-15, B35 motors T.200, 225, 250 and B3 for close-coupled models), IP55, F-class insulation.
- Pump support from AISI 304.

## Options

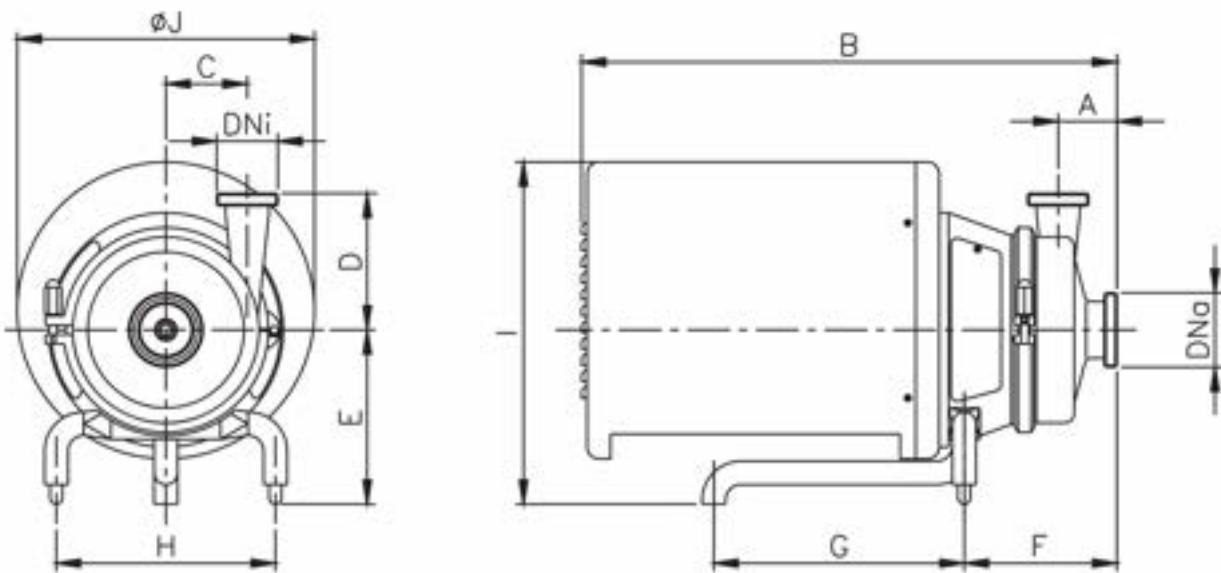

- Bareshaft construction for models S-35, S-38, S-70.
- Mechanical seals in SiC/C, SiC/SiC or TgC/SiC.
- Cooled or double mechanical seal.
- Gaskets in FPM (Viton) and PTFE.
- Ra<0.4 surface finishing.
- Self-priming casing.
- Heating chamber.
- Drainage connection.
- Connections: Clamp, SMS, RJT, etc.
- Motors with additional protection.
- Trolley and/or switchboard.

## ESTAMPINOX EFI

## Application

The Estampinox EFI pump is a stainless steel centrifugal pump for the transfer of water and other liquids. It is designed to cater for the needs of auxiliary services in the food-processing, chemical, pharmaceutical and wine-making industries.

## Design and features

Estampinox EFI is a range of close-coupled centrifugal pumps. It is made of a cold-formed stainless steel casing, open impeller manufactured with stainless steel cold-formed plate or investment casting (according to model), mechanical seal, pump cover, lantern and shaft. Estampinox EFI centrifugal pump is provided with an internal single mechanical seal.

Estampinox EFI centrifugal pump with motor shroud

## Materials:

Parts in contact with the product:  
Stainless steel AISI 316L (1.4404)  
Other steel parts: Stainless steel AISI 304 (1.4301)  
Gaskets in contact with the product:  
EPDM  
Mechanical seal: Rotary part: Cer  
Stationary part: C  
Gaskets: EPDM  
Surface finish: Electropolished  
Connections: Threaded connection (ISO 7)

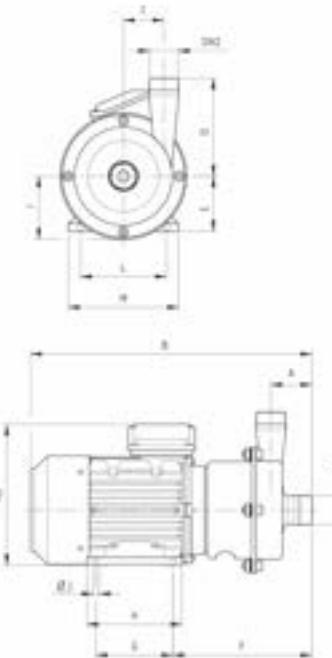

## Options

AISI 304 motor shroud.  
Other materials for mechanical seals and gaskets.  
Motor with other voltages, frequencies and protection classes.  
Trolley and/or control panel.  
Different types of connections.

## TECHNICAL SPECIFICATIONS

Max.flow	65 m <sup>3</sup> /h
Max.head	42 m
Max.suction pressure	4 bar
Max.working temperature	-10°C to +90 °C
Max.speed	3500 rpm

## DB SERIES

Magnetic drive pumps are a type of sealless centrifugal pump. These pumps transmit torque generated by the motor to the impeller by the means of a rotating outer magnet which diffuses the magnetic force through a sealed barrier to the inner magnet connected to the impeller.

There are some pump applications where the consequences of product leakage are serious and as such zero leakage is desirable or, in some instances, even mandated. These tolerances are not typically achievable in a well-specified and well-maintained mechanical seal. Some applications where even limited amounts of leakage would not be tolerated include:

- Toxic/ liquids (e.g. cyanide)
- Heat transfer liquids
- Carcinogens or environmental hazards
- Noxious or malodorous liquids
- Highly corrosive liquids
- Radioactive liquids

Some of the features of the DB Series include:

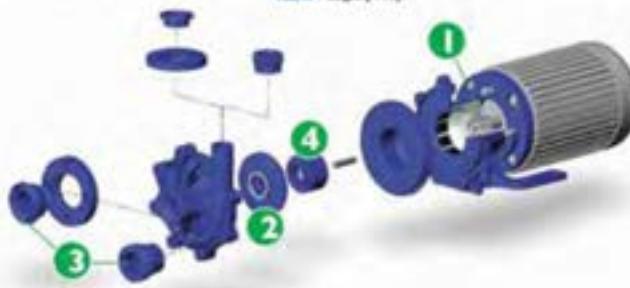

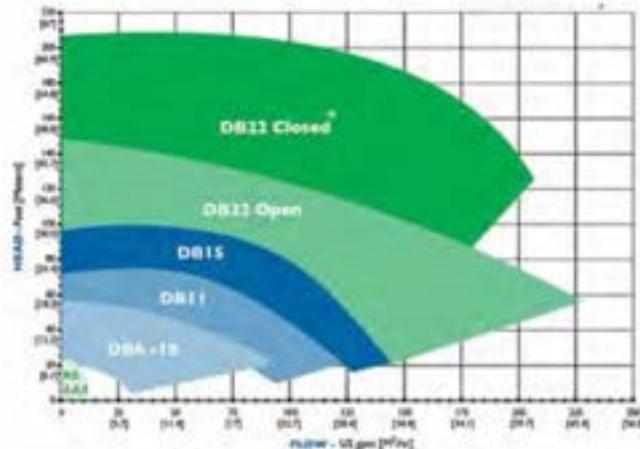

1. Easy Set Outer Drive: Measurement-free outer drive ensures optimum magnet alignment and easy motor installation. Allows optional vertical operation when used with IEC motors.
2. Multiple Impeller Diameters: Allows hydraulic requirements to be precisely met. Two-piece impeller design allows impeller to be changed without having to replace inner drive.
3. Multiple Connections: NPT or BSP threads, raised face adjustable flanges or union.
4. Run Dry System: The DB Series can run dry without damage when equipped with a chemical grade carbon bushing in optimum operating conditions. This helps protect the pump from operator errors and system upsets.

As government regulation agencies enforce environmentally friendly, best manufacturing practices, the list of applications requiring zero leakage will continue to grow. One incentive for using magnetic drive pumps or sealless pump technology is cost saving. Traditional pumps require the frequent replacement of either gland packing or mechanical seals which contributes a high percentage of overall pump maintenance costs. With sealless technology any sundry or auxiliary equipment is unnecessary i.e. seal flush systems, seal barriers or buffer fluids, thus reducing the risk of product contamination.

Introducing the DB Series magnetic drive pump, the new standard for high hydraulic efficiency and corrosive fluid handling. With design added magnetic flux and computational fluid dynamic technology the DB Series packs all the high-pressure fluid-handling punch you would expect....and then some.

Born as the result of a painstakingly extensive research and development effort, the efficiency of the DB Series lowers energy consumption and operating costs over the long life cycle of the pump. Constructed from either Polypropylene or PVDF, the DB Series operates durably in the most corrosive of environments and can even run dry without damage. The DB Series represents rock solid embodiment of technological advancement and is superior in precision, performance and reliability to other pumps on the market.

## Notes:

† Kalrez® is a registered trademark of DuPont Performance Elastomers

‡ Simriz® Perfluoroelastomer is a registered trademark of the Simriz® division of Freudenberg-NOK

|| Hastelloy® C is a registered trademark of Haynes International, Inc.

## Features

- + Close-coupled design
- + Polypropylene or PVDF construction
- + Replaceable shaft
- + ISO 1940 G2.5 balancing
- + Mounts to Nema and IEC motor frames
- + Mounts to motor without disassembly
- + Back pullout design
- + Five-year warranty
- + CE certified/ATEX available

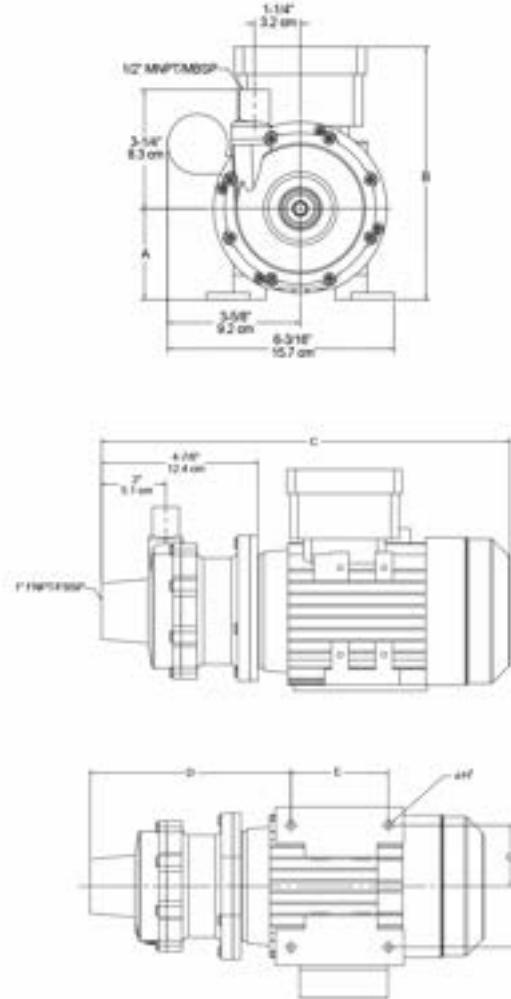

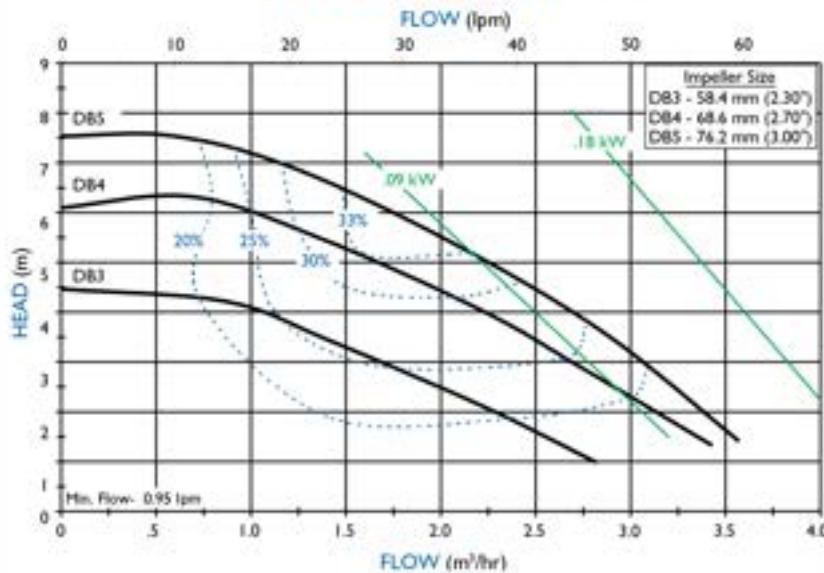

## Capabilities

- + High operating efficiency—up to 70%
- + High working pressure—up to 90 psi
- + High specific gravity handling—over 1.8
- + Maximum viscosity: 150 cP
- + Maximum Temperature: Polypropylene—180°F (82°C); PVDF—220°F (104°C)

## Applications

- + Chemical manufacturing
- + Metal plating/working
- + Wastewater treatment
- + Electronics manufacturing
- + Fume scrubbing
- + Mining
- + Paper mills
- + Printing
- + Pharmaceutical processing
- + Agriculture
- + OEM equipment supply
- + General pump applications

## SP SERIES

Big on power yet short on energy consumption, the SP Series from Finish Thompson is one of the most versatile and economical centrifugal pumps on the market.

Backed by an industry best five-year warranty, it's also one of the most reliable. The exclusive SP series combines deep-lift capabilities (up to 25 feet/7.6 metres) and lightning fast priming (18 feet/5.5 metres in 90 seconds) with the advantages of magnetic drive technology, ensuring ease of operation with no seal replacement, no leaks and the capability to run-dry without damage. What's more, its innovative design and corrosion-resistant materials make the SP Series ideal for handling even the most difficult applications.

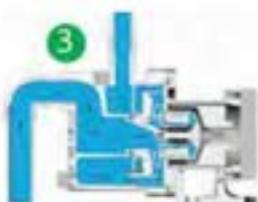

## Principles of Self-Priming

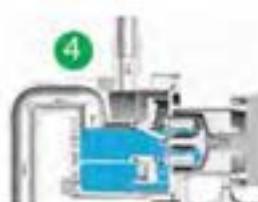

1. During pump installation, the priming housing is filled through the fill port.

2. As priming begins, air in the suction piping mixed with liquid in the priming chamber forms a vacuum in the inner volute. As they separate, the air rises out of the discharge piping while the liquid returns to the priming chamber.

3. The circulation process continues until liquid replaces all the air in the suction piping, beginning the pumping process.

4. When the pump is shut off, the priming chamber's gooseneck design ensures that enough liquid is retained for efficient re-priming.

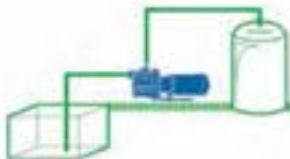

## Applications

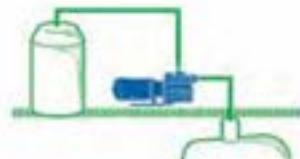

1. Transfer from top of rail cars or tanker trucks to bulk storage.

2. Transfer from bulk storage to process or day tanks.

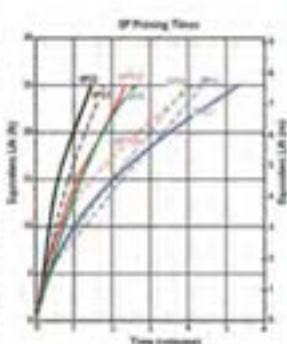

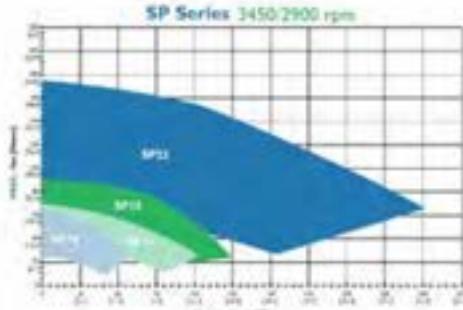

3. Pump from underground sumps or pits to treatment tanks.

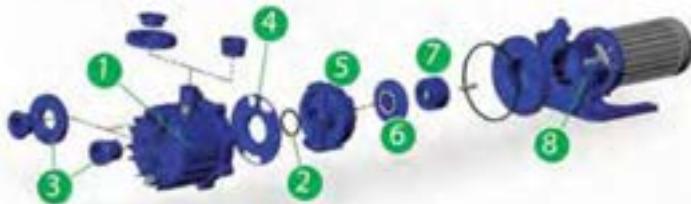

4. Pump from underground storage tanks to process or day tanks.

## SP Series Performance Details

## SP SERIES

**1. Thermoplastic Priming Chamber**

Functions as a fluid reservoir and features moulded-in "gooseneck" suction passage eliminating the need for internal check valves. Integral fill and drain ports are standard. Available in GF-PP or CF-PVDF for optimal corrosion resistance.

**2. O-ring**

Creates airtight seal between the inner volute and the "gooseneck" suction passage. Helps the pump maintain the vacuum required for proper priming.

**3. Multiple Connections**

NPT or BSP threads, raised face adjustable flanges or union.

**4. Separator Plate**

Acts as a barrier between the low velocity fluid reservoir and the high velocity area in the rear of the priming chamber. Openings allow liquid to flow to the impeller and discharge the air/liquid mixture created during priming back into the fluid reservoir.

**5. Inner Volute**

Houses the rotating impeller. Special design allows air to be efficiently removed from the suction passages for fast priming.

**6. Multiple Impeller Diameters**

Allows hydraulic requirements to be precisely met. Two piece impeller design allows impeller to be changed without having to replace inner drive.

**7. Run Dry System**

The SP can run dry without damage when equipped with a chemical grade carbon bushing in optimum operating conditions. This helps protect the pump from operator errors and system upsets.

**8. Easy Set Outer Drive**

Measurement-free outer drive ensures optimum magnet alignment and easy motor installation.

## Capabilites

- Retains fluid for re-priming when shut off without a check valve.
- Runs without damage in absence of continuous flow.
- Provides up to 25 feet (7.6 metres) of lift
- Primes up to 18 feet (5.5 metres) in 90 seconds
- High working pressure up to 90 psi (6.2 bar)
- High specific gravity handling over 1.8
- Maximum Temperature: Polypropylene - 180°F (82°C); PVDF - 220°F (104°C)

## Features

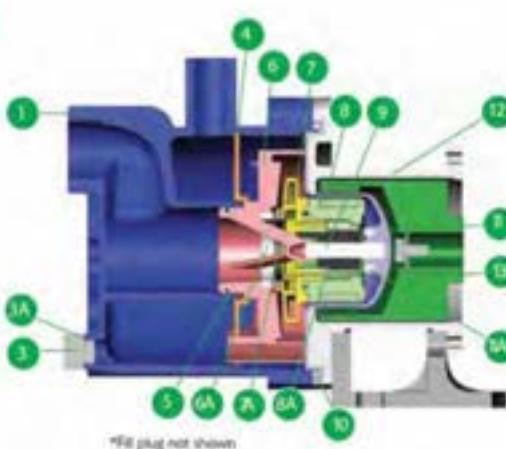

- Five year warranty
- Polypropylene or PVDF construction
- Sealless mag drive
- Powerful neodymium magnets
- Close-coupled with back pullout design
- Mounts to NEMA and IEC motor frames
- Replaceable shaft
- ISO 1940 G2.5 balancing
- CE Certified

## Applications

- Sumps
- Underground storage tanks
- Rail Cars
- Tanker trucks
- Over-the-wall applications
- Tanks with an opening on top
- Piping systems that tend to have trapped or entrained air
- When run dry protection is needed

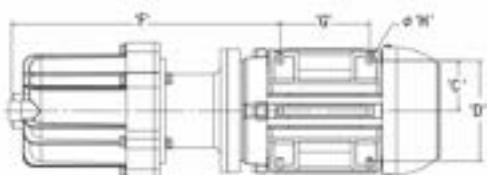

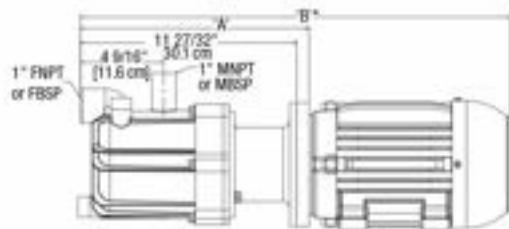

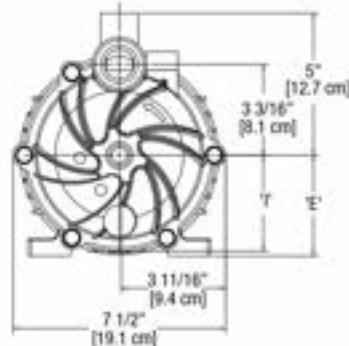

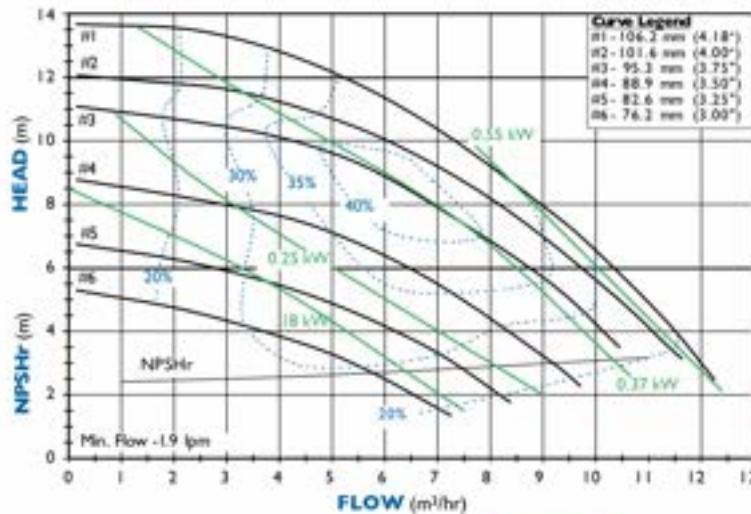

DESCRIPTION	POLYPROPYLENE MODELS	PVDF MODELS
1 Housing	Glass fibre reinforced polypropylene	Carbon fibre reinforced PVDF
4 Separator plate		
6 Inner volute		
7 Impeller		
3A O-ring options	FKM, EPDM	
6A Inner volute thrust ring options	Polypropylene High purity alumina ceramic, silicon carbide	PVDF
7A Impeller thrust washer options	Molybdenum disulphide filled PTFE, silicon carbide	
8 Inner drive	Neodymium iron boron magnets encapsulated in unfilled polypropylene	Neodymium iron boron magnets encapsulated in unfilled PVDF
8A Bushing Options	Carbon, PTFE, high purity alumina ceramic, silicon carbide.	
9 Shaft options	High purity alumina ceramic, Hastelloy® C, silicon carbide	
11 Barrier	Glass-fibre reinforced polypropylene	Carbon-fibre reinforced PVDF
11A Barrier thrust ring	High purity alumina ceramic	
12 Motor adapter	Ductile iron or glass reinforced polypropylene	
13 Outer drive magnets	Nickel plated neodymium iron boron magnets/ steel.

## UC SERIES

**Casing (1, 2, 2A, 11)**

High strength ductile iron bonded with pure Tefzel® for exceptional corrosion resistance. ANSI dimensional design with self-venting top centre line discharge. Premium alpha sintered silicon carbide thrust washer and replaceable carbon-filled ETFE shaft support with integral straightening vanes help prevent pre-rotation in the suction and enhance low flow operation.

**Barrier (6, 6A, 12)**

A precision moulded, carbon-filled ETFE liner and external containment shell of woven glass-reinforced vinyl ester make up the barrier assembly, providing optimum chemical and pressure resistance. The nonmetallic design eliminates energy losses due to eddy currents from the magnetic coupling. The barrier contains a high purity ceramic rear thrust ring for maximum durability. A fully contained O-ring provides a leak-proof seal.

**Impeller and Internal Drive (3, 3A, 4, 4C)**

Enclosed impeller is injection moulded from carbon fibre reinforced ETFE for superior chemical resistance and strength. Versatile lock-fit design allows removal of the impeller from the internal drive for lower maintenance costs. Rare earth magnets are encapsulated in pure ETFE for added protection against the most aggressive chemicals. The thrust balance system utilizes generous balance holes and a replaceable rear sealing ring with the same diameter as the impeller thrust ring to balance axial thrust. A replaceable Fluorosint® impeller thrust ring provides exceptional wear characteristics at all flows (also available in optional alpha sintered silicon carbide).

**Drive Assembly, Motor Adapter, Motor Adapter Flange (8, 9, 10)**

Drive assembly and motor adapter are made of high strength ductile iron for added mechanical strength and stiffness. The outer drive is dynamically balanced to ensure smooth operation and reliability. Easy set outer drive feature ensures optimum magnet alignment and easy motor installation. The motor adapter is designed to slide over the outer drive magnet for easy maintenance. An optional bronze bump ring is added to the motor adapter for explosion-proof environments and in ATEX certified models. A machined steel motor adapter flange allows the pump to be mounted to a wide array of NEMA and IEC motors.

**Magnets (4, 8)**

High strength, rare earth neodymium iron boron magnets transmit maximum power up to 250°F (121°C). FTI's unique technology ensures an extraordinarily strong, secure coupling between the motor and pump. Sealless design virtually eliminates maintenance and environmental emissions.

**Dual Bushings (4A, 4B)**

Replaceable alpha sintered silicon carbide bushings ride evenly on the shaft and distribute radial loading over the entire length of the shaft. The self-aligning design eliminates premature wear caused by bushing misalignment. Internal spiral grooves help flush and lubricate the shaft during operation. A pure PTFE spacer separates the bushings. Optional carbon or dri-coat alpha sintered silicon carbide bushings allows run dry capability.

**Shaft (5)**

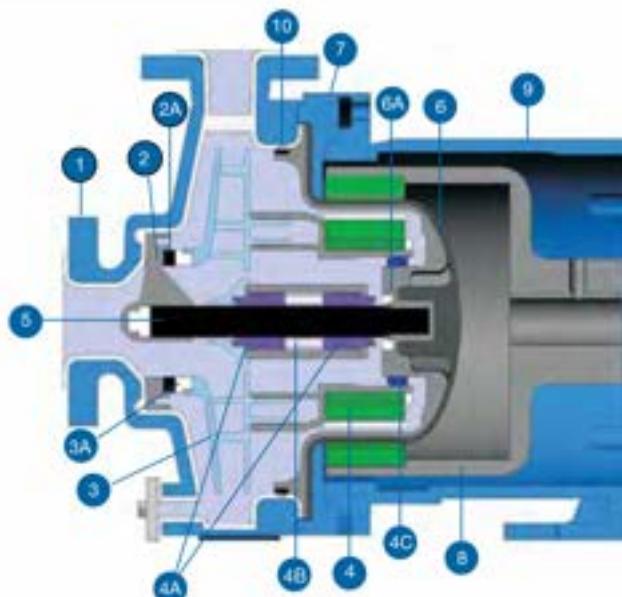

A replaceable premium alpha sintered silicon carbide or dri-coat alpha sintered silicon carbide shaft is shaped to minimise stress concentrations. Shaft is fully supported on both ends for maximum strength.

**Clamp Ring (7)**

A machined steel clamp ring provides a precise fit between barrier and casing to minimise barrier stress and deflection under pressure for maximum operating reliability. It separates the liquid end from the motor allowing the motor to be removed without opening the liquid end.

ITEM	DESCRIPTION	CONSTRUCTION FEATURES
1	Casing	Cast ductile iron lined with DuPont Tefzel®
2	Shaft Support	Carbon-filled ETFE
2A	Front thrust ring	Alpha sintered silicon carbide
3	Impeller Assembly	Enclosed impeller injection moulded from carbon fibre reinforced ETFE
3A	Impeller Thrust Ring	Fluorosint® (Alpha sintered silicon carbide optional)
4	Impeller Drive Hub	Carbon fibre-filled ETFE with neodymium iron boron magnets encapsulated in pure ETFE
4A	Bushings & Spacer	Alpha sintered silicon carbide bushing with PTFE Spacer (Carbon bushing or dri-coat alpha sintered silicon carbide bushing optional)
4C	Rear Sealing Shaft	Molybdenum disulfide filled PTFE
5	Shaft	Replaceable alpha sintered silicon carbide (Dri-coat alpha sintered silicon carbide optional)
6	Barrier	Moulded carbon fibre-filled ETFE liner with woven glass-reinforced vinyl ester external shell
6A	Rear Thrust Ring	High purity ceramic
7	Clamp Ring	Steel
8	Drive Assembly	Nickel-plated neodymium iron boron magnets/heavy duty ductile iron
9	Motor Adapter	Heavy duty ductile iron
10	Motor Adapter Flange	Steel
11	Drain Plug	304 stainless steel/Gylon gasket
12	O-ring	FKM, EPDM, Kalrez®, Simriz®

**UC SERIES****Ultra Reliable**

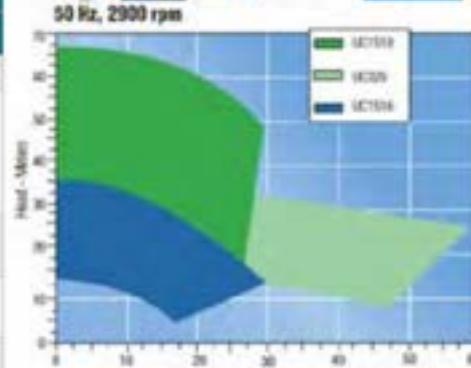

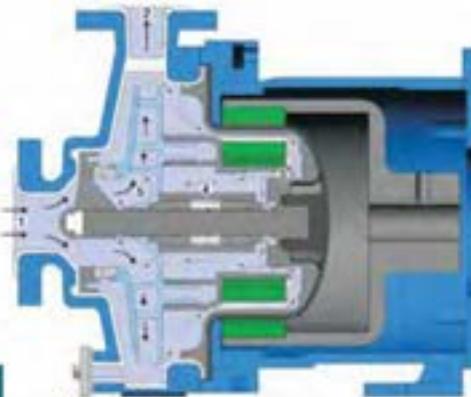

Engineered for extreme reliability in the most extreme chemical processing applications, Finish Thompson's ULTRACHEM® is a magnetically driven, ANSI dimensional pump constructed from tough ductile iron with DuPont Tefzel® (ETFE) lining for superior corrosion resistance.

**Ultra Sealless**

Powerful neodymium magnets drive the impeller through a carbon-filled ETFE lined barrier for dependable, leak-free operation with no environmental emissions, no double mechanical seal costs, and no seal support systems.

**Ultra Chem Circulation & Thrust Minimisation**

As the liquid flows through the suction and into the impeller (1), it accelerates to a high velocity and is pressurised, exiting the discharge (2). A small portion of the flow is re-directed to the rear of the impeller drive where it proceeds through the rear sealing ring (3), which minimises axial impeller thrust. The flow then goes both around the bushings and through the spiral grooves in the bore of bushings (4) in order to enhance the flow, remove heat, and provide lubrication between the shaft and bushing bore, before emptying back into the impeller suction eye (5).

## MSKC SERIES

## Features

- Sealless mag drive technology - eliminates costly seal problems.
- Multi-Stage design: Generates increased head at low flow rates, low power consumption, wide hydraulic envelope allows for mix and match impeller sizes.
- Small footprint - avoids large impeller diameters.
- Unique interconnecting drive shaft - transmits torque from magnetic coupling to first stage impeller.
- Independent thrust bearings at each stage for maximum reliability.
- Polypropylene or PVDF construction.
- Accepts standard NEMA 56C or IEC 71/B14, 80/B14 frame motors.
- Maximum working pressure 80 psi.
- Maximum temperature: 180°F (82°C) - Polypropylene  
220°F (104°C) - PVDF
- Maximum flow 60 gpm (12.8 m³/hr.), maximum head 100 ft. (21.3 m)

# SELF PRIMING PUMPS

**HYDROPRIME**  
Quality Self Priming Pumps

PAGE  
114

## Principle of Self Priming

Upon starting the pump, pressure drop occurs at the eye of the impeller which will give rise to pressure differences within the pump system (pump casing & suction pipe) and outside the pump system. As the pressure continues to drop in the pump system, a mixture of liquid and air will start to flow into the pump due to higher atmospheric pressure outside the pump system.

The mixture of liquid and air will flow through the casing chamber designed like a diffuser through the inlet and then to the discharge port. At the discharge port, air being lighter will be extricated through the discharge piping. The liquid being heavier will fall back into the pump chamber and re-mix with the inlet liquid. This process is repeated till air in the suction pipe and pump casing is fully emptied and filled with liquid. At this point, the pump will then be fully primed and achieve the self-priming effect.

## Applications:

### Industry

- Waste water treatment
- Transfer of low viscosity petroleum products
- Recovery of dirty solvents
- Emergency duty

### Civil engineering/civil defence

- Sewer by-pass
- Recovery of hazardous liquids
- Flood drainage

### Marine duty

- Bilge pumping
- Sanitary duty
- Loading and unloading
- Washing
- Fire fighting

### Sewage

- Lift stations
- Sewage by-pass
- Treatment

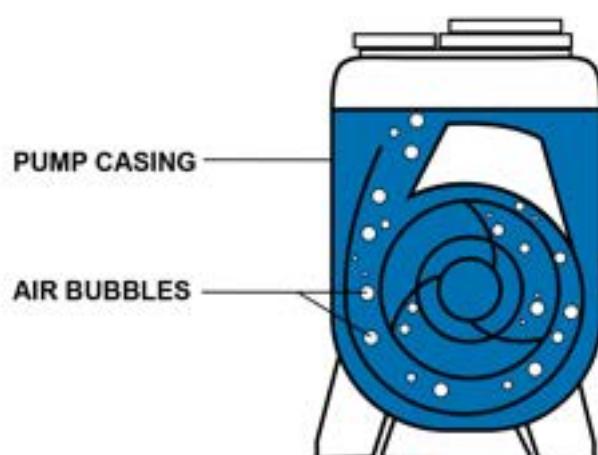

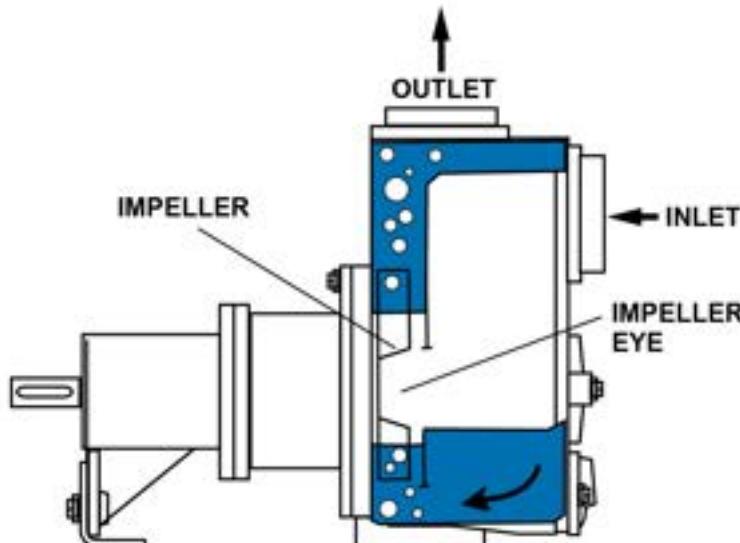

### Construction

- Dewatering
- Ground water control
- Water supply

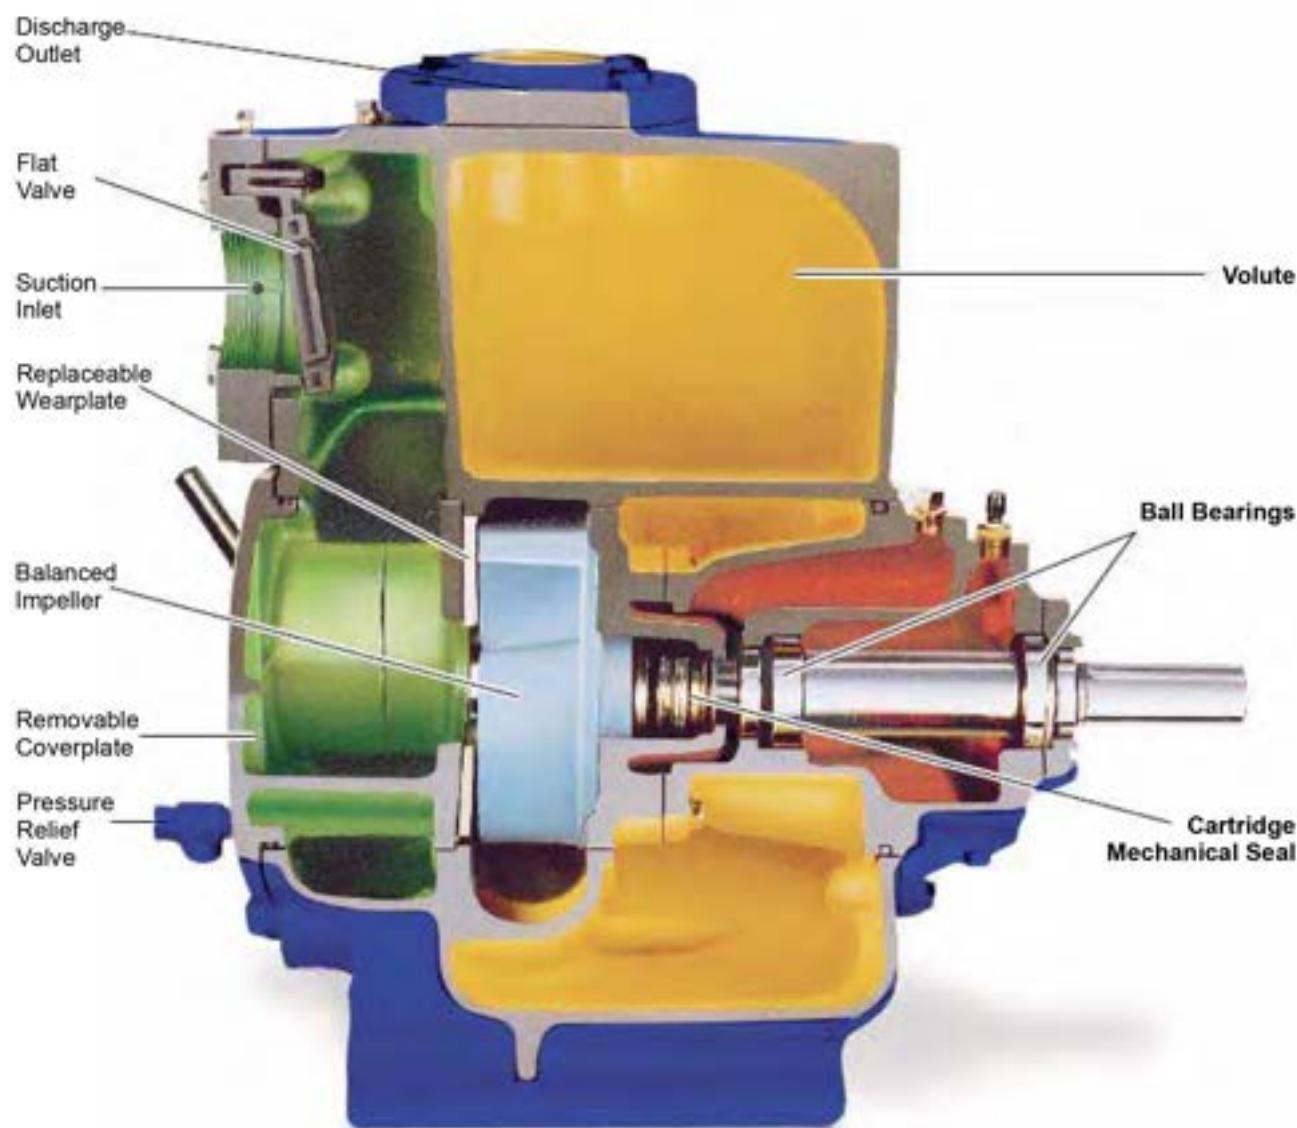

### Agriculture

- Surface irrigation
- Liquid manure
- Distribution of liquid animal feed

Quality Self Priming Pumps

A large industrial column pump, likely made of stainless steel, is being hoisted by a red lattice-boom crane. The pump has a prominent vertical ribbed section and a horizontal flange with a metal mesh guard. A worker in a yellow hard hat and dark clothing stands at the base of the pump, observing the lift. The background shows a clear blue sky and a large stack of red shipping containers in a port yard.

# COLUMN PUMPS

**HYDROTMAX**  
Quality – ISO | DIN | Split Case – Centrifugal Pumps

PAGE  
126

**HYDROMAX**  
Drainage - Sump - Pump - Solid Removal - Circulating Pumps

A vertical column pump involves a vertical shaft supported in a vertical column. The shaft and column connect the motor which is mounted outside the pit to the pump end which is mounted inside the pit. The pump end is submerged in the liquid which allows the liquid to enter the impeller and be pumped through a volute casting and out a column discharge pipe.

The shaft and column are available in different lengths to suit the depth of the pit. Vertical column pumps are typically used for pumping water and other relatively thin liquids. They can be used for pumping liquids with small amounts of solids if correct impeller type is installed. Column pumps are available in alloys and other materials for corrosive applications.

Vertical column pumps are a relatively low cost sump pump option and as the liquid end is submerged in the liquid any possible cavitation issues are avoided.

Also, most designs need no shaft seal as the shaft column is not pressurised. Vertical sump motors are situated outside of the pit which allows easy inspection and safer maintenance, removes any risk of potential problems caused by immersion, and facilitates broader motor selection and easy repair or replacement.

## Applications

- Chemical Production
- High Temperature Liquids
- Dangerous Chemical Transfer
- General Industry
- Flammable liquids

## Lubricated Pump Shaft

The pump shaft runs in oil for lubrication of bottom locating bearings and intermediate bearing.

## Mounting Plate

A steel mounting plate, pre-drilled to take mounting bolts is fitted for simple pump installation.

## Balanced Impeller

The impeller has been balanced to ensure smooth operation, high efficiency and durability.

## TEFC Motor

The standard electric motor is a totally enclosed fan-cooled unit for protection against moisture or dust, and for cool running. All single phase motors are fitted with thermal overload protection.

## Flexible Options

There are a wide variety of options available to customise individual pumps for specific applications, including various column lengths; twin columns; cantilever design and a variety of construction materials for different components.

## Mechanical Seals

Mechanical self-adjusting seals are fitted as standard, however you have the option of fitting special high temperature seals for use over 80°C and various seal materials for special liquids.

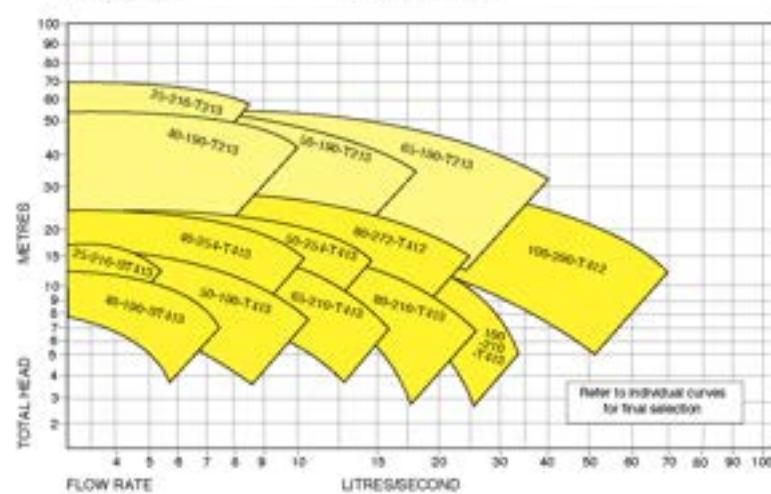

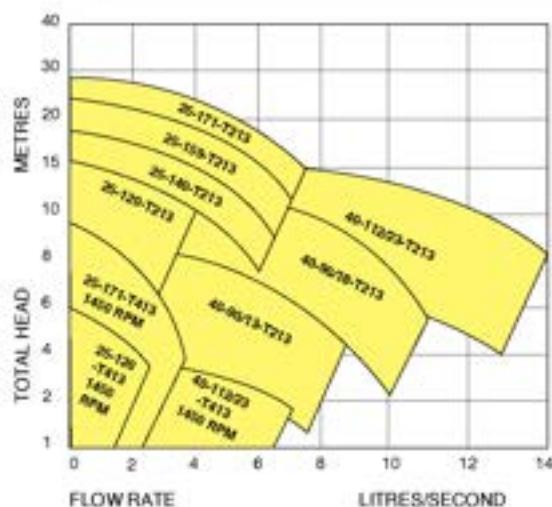

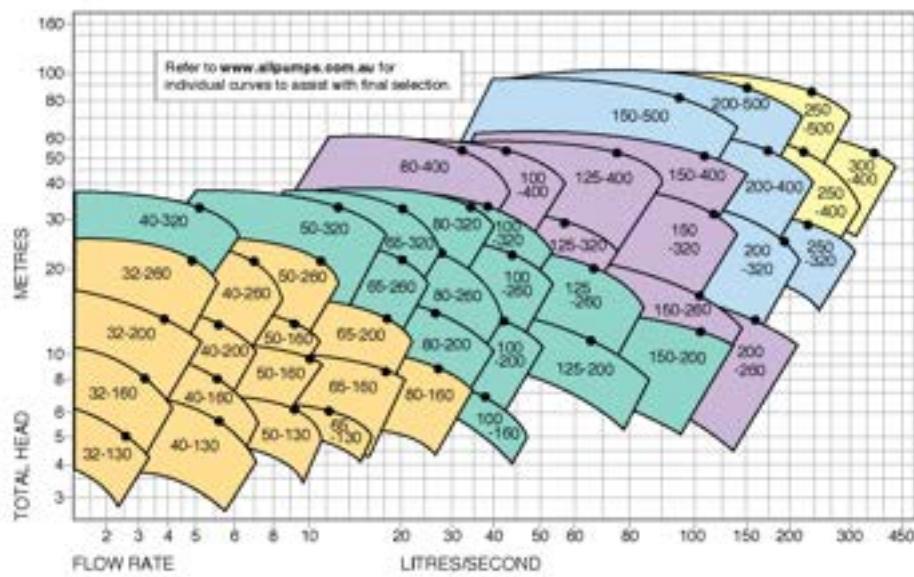

## Material Options:

Standard construction is cast iron with a bronze impeller and stainless steel shaft. Options include all cast iron, bronze, zinc-free bronze and 316 stainless steel. Seal: mechanical - carbon/ceramic mating faces. Options Available: special seals for high temperature and various liquids.

# SLURRY PUMP

SLURRYPRO

PAGE  
130

## SLURRYPRO

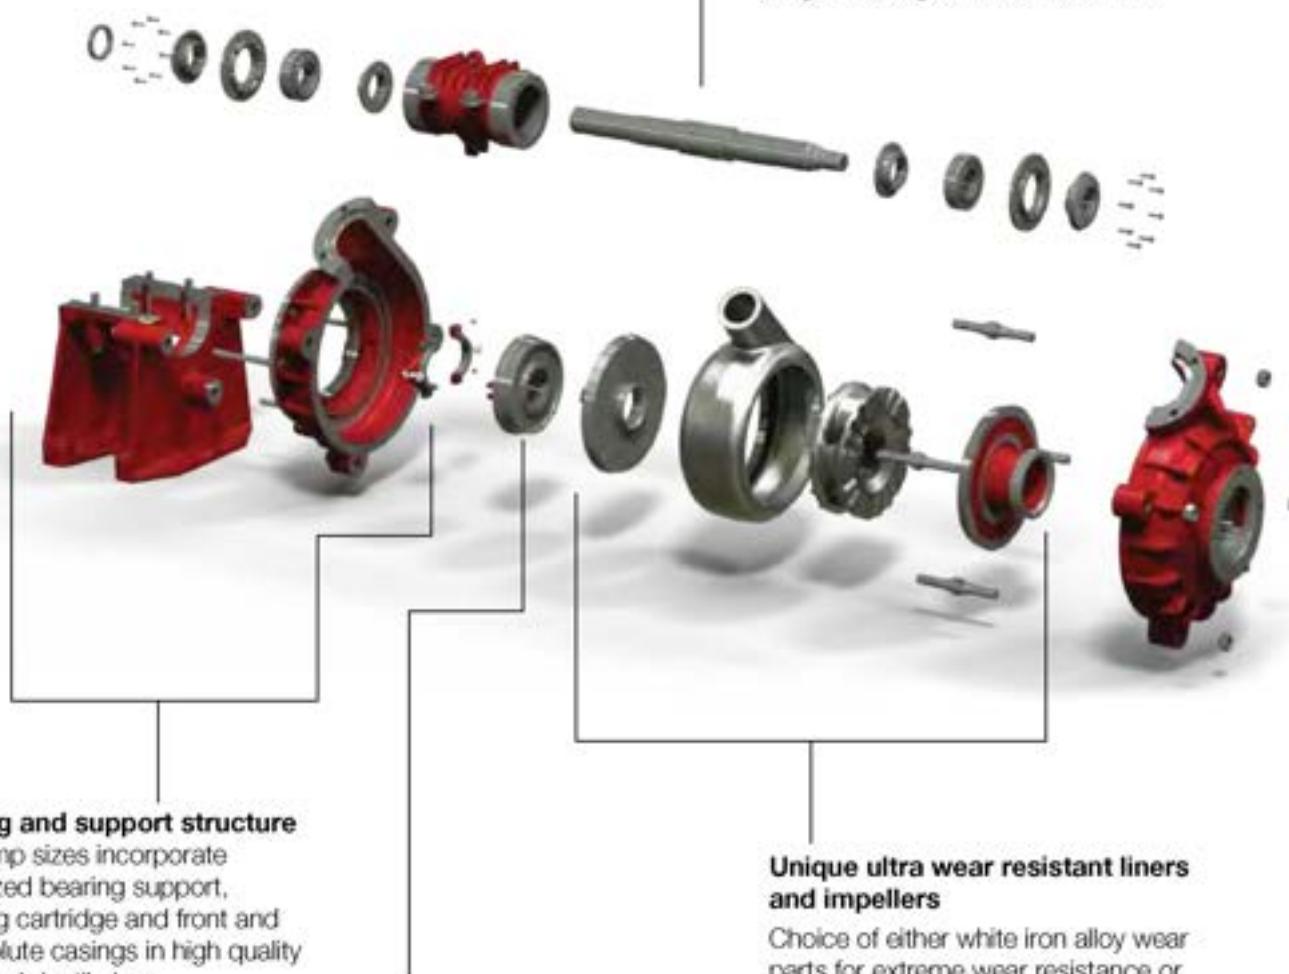

### Overview

Slurry pumps have many industrial applications where liquids containing particles must be pumped. Applications for slurry pumps include mine dewatering, pumping mine slurries and tailings, mineral processing, fly ash and bottom ash sluicing in coal-fired power plants, mill scale handling, sand and gravel sluicing in quarries and dredging operations, paper mill waste processing and clay slurry processing.

The major concern in pumping abrasive slurries is the wear on the impeller, casing and other wetted parts and along with being abrasive, many of these slurries are corrosive as well.

### Diamond Series

#### Casing and support structure

All pump sizes incorporate oversized bearing support, bearing cartridge and front and rear volute casings in high quality cast and ductile iron.

#### Sealing system

Available with either standard packed gland arrangement or a drop-in cartridge mechanical seal designed for the pump.

#### Rotating unit

Oversize shaft and bearings for zero shaft deflection. "Run cool" bearing housing for longer bearing and lubrication life.

#### Unique ultra wear resistant liners and impellers

Choice of either white iron alloy wear parts for extreme wear resistance or UEC (Unique Elastomeric Compound) rubber-like liner and impellers for improved life when compared to standard rubber offerings.

Over 100 years of mining industry pump experience focused on delivering a PREMIUM range of slurry pumps. The result: the SlurryPro® DIAMOND and UEC Pump Series.

**"To provide relief from downtime and maintenance costs"**

## The Fastest Response - Globally

With profiled reserve stocks of components and a world class lean manufacturing system, delivery of pumps and parts and associated engineering support is the fastest in the industry – across 4 different continents SlurryPro® has on-the-ground presence in Australia, South America, Europe, and the United States.

## Innovation Today For Tomorrow's Demands

Engineering design improvements ensure that SlurryPro® Pumps continue running long after conventional designs have given up. Thanks to innovative design features which allow the pumps to run cooler and cleaner SlurryPro® Pumps improve operating efficiencies and greatly reduce down-time failures. A unique bearing housing design and modular "no fuss" sealing system, liner and wear part options make for a pump that really fits your application. Attention to detail – small details add up to make a big difference.

## Focused On The Mining Industry

Proven performance in a demanding industry with support and back-up by experienced regional mining industry specialists adds local knowledge to each pump unit supplied.

## Product And Part Accountability To Each And Every Customer

Quality control, identification and traceability from foundry to end-user ensure that parts consistently perform at beyond industry expectations.

## Special Configurations, Fast!

State-of-the-art manufacturing procedures make for reduced turnaround times even for alternative pump configurations and built-up skids.

## Not Just Heavy Duty, Super Duty!

Designed for the worst duties with oversized shafts and bearings and generous casting wall thicknesses mean that SlurryPro® Pumps continue to deliver in the harshest conditions.

## Effortless Upgrade

Critical dimensions are interchangeable to other common centrifugal slurry pump designs making it easy to trade up for a SlurryPro®.

## Sealing System

The modular sealing chamber design of the SlurryPro DIAMOND and UEC series pumps allows for flexibility when specifying new pumps or upgrading existing pumps:

### **1 Independently lubricated SlurryPro modular cartridge seal**

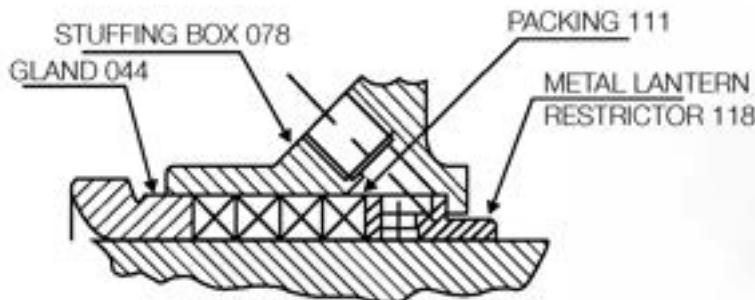

O-ring damped sealing faces for excellent shock resistance, no flushing or water supply required, modular parts for simple on-site repair and extreme tolerance to axial movement means that impeller adjustment does not require seal removal or clamping.

### **2 Expeller design**

For low inlet pressure applications.

### **3 Wear resistant gland packing**

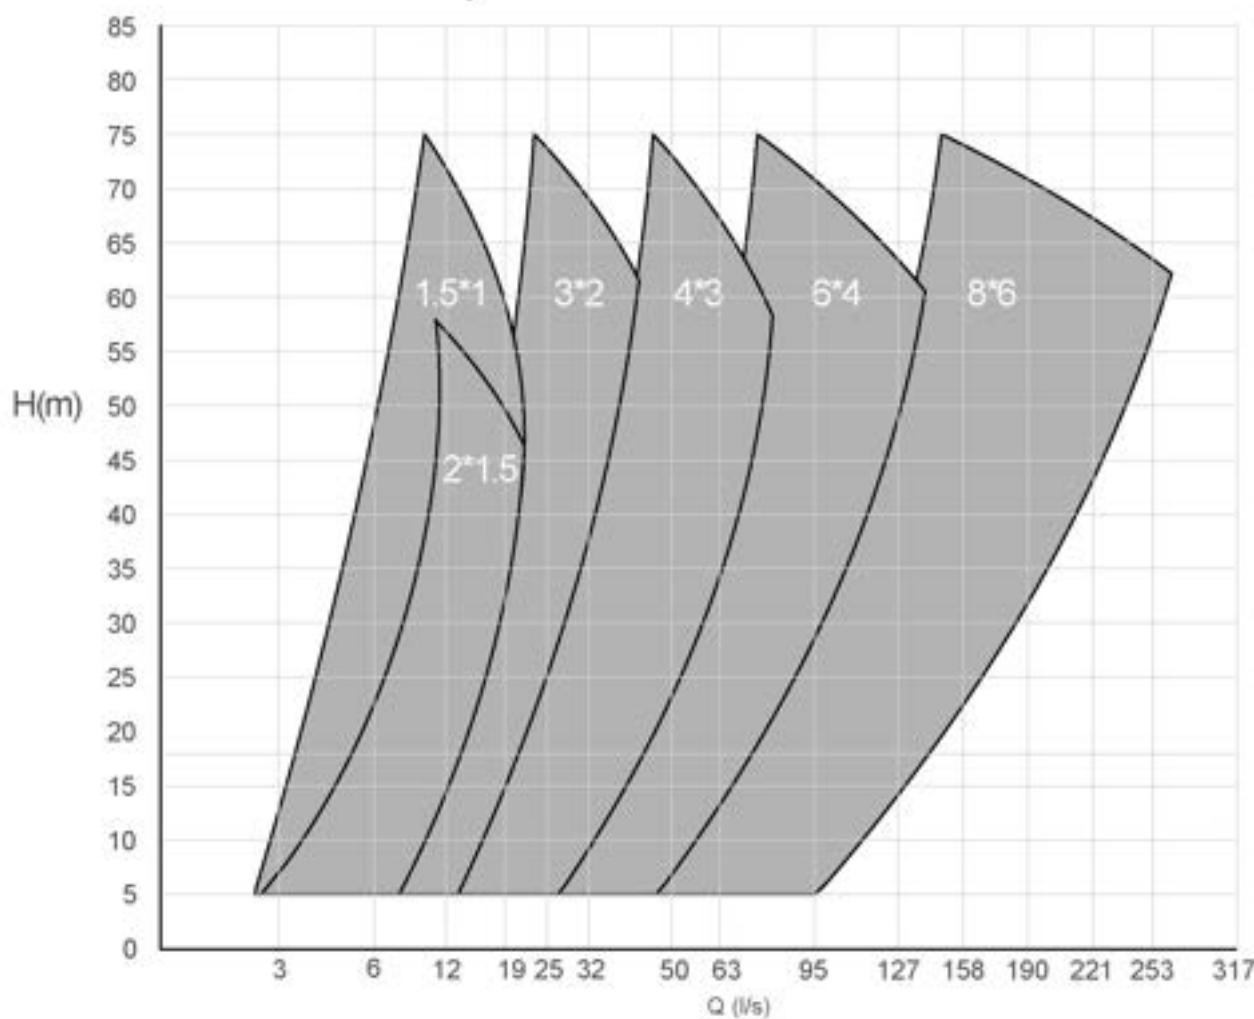

Tough gland packing on a hardened replaceable shaft sleeve provides a rugged, cost effective sealing solution. A variety of packing materials including chemically and wear resistant braided packing rings and injectable "on the run" sealing products are available.

## Performance Curves

SD Series - SlurryPro Diamond

SU Series - SlurryPro UEC

Max discharge pressure is dependent on impeller and liner configuration – consult factory

## SLURRYPRO

### Upgrade With Interchangeable Technology

The SlurryPro Silver Series is a flexible, proven range of horizontal and vertical slurry pumps in a wide range of sizes. Available with both high chrome and different grades of rubber wearing parts. The SlurryPro Silver Series pump and spare range allows you to continue using your current pump configurations, spares stock and pipework configuration.

### Vertical

This heavy duty range features a cantilever shaft design that eliminates any bearings or seals in the fluid end. An ideal pump for heavy slurry wash down and spill duties. A full range of material options including complete elastomer lined pumps and hard metal options for corrosive and abrasive media duties.

Pumps in all sizes can be configured with a range of column lengths and impeller designs. They are ideal for corrosive coarse particles and high concentrations of slag pulp and are widely used in the metallurgical, mining and coal industries.

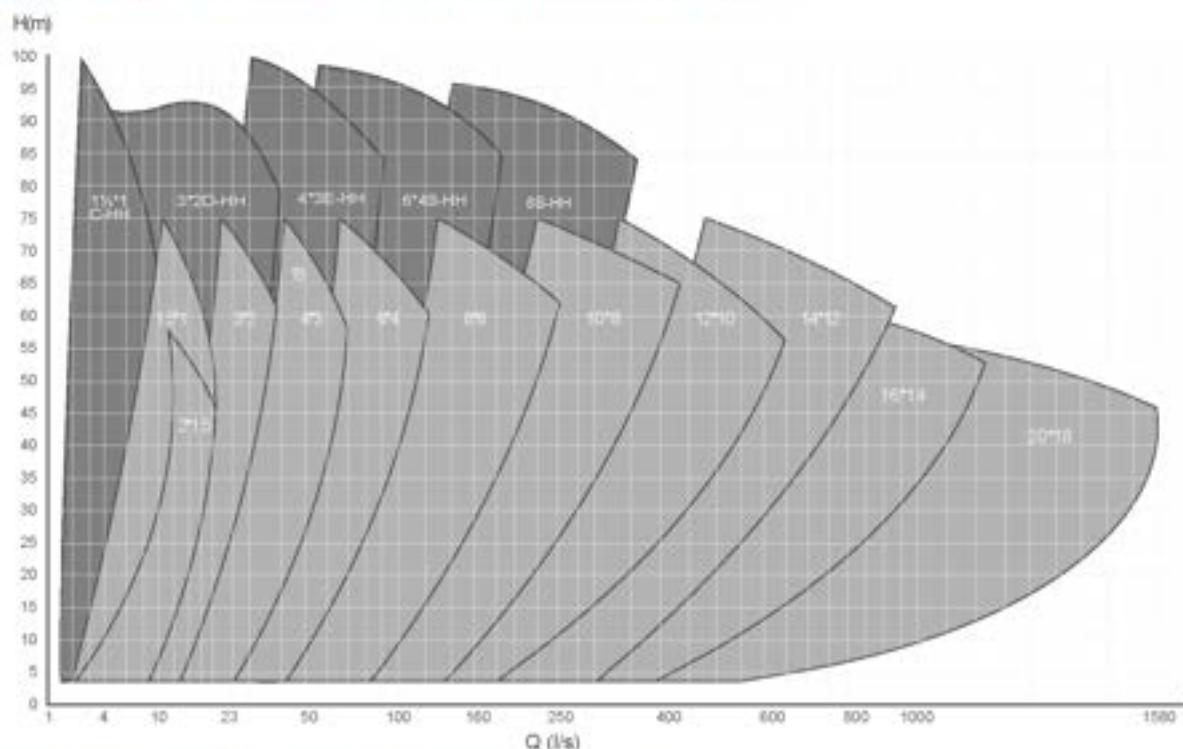

### Horizontal

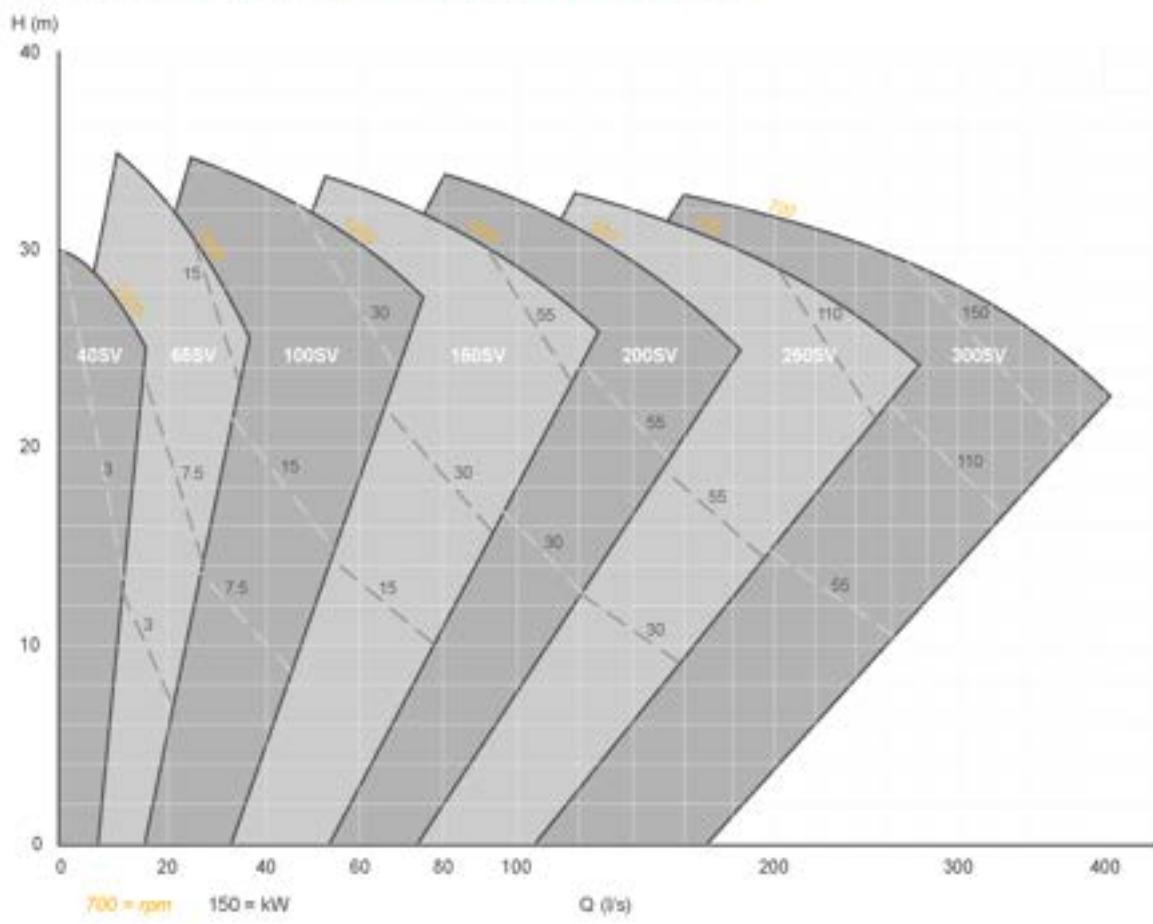

A complete range of sizes are available across the full selection of pump types and materials. Components come in a range of elastomer and hard metal types and materials to suit any application, for maximum abrasion and corrosion resistance. The removable cartridge-type bearing assembly facilitates easy on-site maintenance procedures on-site.

A range of seal types are provided to suit every requirement, including centrifugal shaft seals to eliminate gland sealing water are available.

## Silver Series Parts

SlurryPro offers a wide range of interchangeable replacement spare parts to suit most common brand slurry pumps.

- Impellers - hard metal and elastomer
- Casing liners - hard metal and elastomer
- Shaft units
- Bearings
- Seals and Sealing Systems

# SPLIT CASE PUMPS

**HYDROTMAX**

Quality – ISO | DIN | Split Case – Centrifugal Pumps

PAGE  
140

Horizontal split case pumps, or as they are occasionally called axially split case pumps, are widely used where extremely high flow rates of water are required.

These pumps are widely used in any of the following applications:

- Condenser Water
- Chilled Water Circulation
- Hot Water Circulation
- General Industry
- Water Supply
- Drainage
- Boiler feed applications requiring high pressure and high flow.

The beauty of horizontal split case pumps is that they can be maintained in place without the need to remove or disconnect piping.

The lowest life-cycle range of split case pumps has been developed to offer the end user maximum efficiency and design life over a wide range of duties. The well proven design not only achieves market leading efficiencies, but also offers long component life, easy maintenance and reduced levels of efficiency degradation.

The standard materials of construction include a stainless steel impeller, stainless shaft cartridge mechanical seals and internally coated casing.

## Nomenclature

HS	250	-	450	A	-	L	-	R(F)	-	MS/GP
<b>EXAMPLE</b>										
HS split casing pumps	Outlet of pump (mm)		Diameter of Impeller (mm)	Impeller is trimmed one time		L: Vertical Construction		R: Hot Water F API 610 BB1 (Petrochemical application)		MS: Mechanical Seal GP: Gland Packing

## The Technical Parameter of Type HS Pumps:

DN	80~1400mm
Q	22~25200m³/h
H	7~280m
T	-20°C~105°C -60°C~200°C
SOLID CONTAINS	80mg/L
WORKING PRESSURE	<2.5Mpa <4Mpa
FLANGE STD	DN, ANSI, BS, JIS, GB

- High Efficiency and low pulsation
- Wide performance range with up to 280m head and 25,200m³/hr
- Stable service and low maintenance
- Heavy duty design and long life span
- Options for CW/CCW rotation
- Fine production and shortest down time
- HS is the horizontal single stage axial split casing centrifugal pumps with double suction impeller.
- Axially split casing, allows maintenance to the pump without removing pipework.
- The shaft can be sealed by either gland packing or mechanical seal.

# MULTISTAGE HORIZONTAL PUMPS

PAGE  
144

The JH, JHI series are non-self priming, horizontal multistage centrifugal pumps. The pump is close coupled to the motor and mounted on a base plate. This user friendly design makes the pump suitable for installation in small domestic and industrial water supply or transfer applications. The pump is fitted with a mechanical seal and common pump-motor shaft.

## Type Key

Example -	JH	4	-	30	-	CQBE
Pump type	Nominal flow rate [m³/h]		Number of stages x 10		Mechanical Seals	

## Pipe Connections

CONNECTION	JH, JHI	JH, JHI
Suction port:	1" BSP	1 1/4" BSP
Discharge	1" BSP	1" BSP
Drain hole, piping hole	3/8" BSP	3/8" BSP

The pump is fitted with a totally enclosed, fan-cooled motor.

## Motor

Standard voltages	1 x 220 - 240V, 50 Hz
	2 x 220 - 240 / 415V, 50Hz
Rated speed	280 rpm (50Hz)
Enclosure class	IP 54
Insulation class	F

The pump is fitted with a totally enclosed, fan-cooled motor.

## Operating Conditions

Liquid: Clean liquid without solid particles.  
Liquid temperature range: 0°C - +90°C.  
Maximum ambient temperature: +50°C.

The maximum operating pressure depends on the temperature of the pumped liquid.

Max. Operating Pressure	JHD(1)2, JHD(1)4
10kg/cm²	0°C + 40°C
6kg/cm²	+41°C to +90°C

## Performance Range 50Hz

## Pumps

The JH and JHI series are non-self priming, horizontal multistage centrifugal pumps. The Pump is close coupled to an electric motor with a common shaft and mounted on a base-plate. This design makes the pump suitable for installation in the small domestic or industrial water supply systems. The pump is fitted with a mechanical seal and common pump-motor shaft.

JH - The discharge and suction chamber are made of cast iron. The other parts of pump in contact with the liquid are made of stainless steel.

JHI - All parts of the pump in contact with the liquid being pumped are made of stainless steel. EPDM or Viton elastomers are available as standard.

## APPLICATION

- Domestic
- Liquid Transfer and circulation
- Pressure Boosting

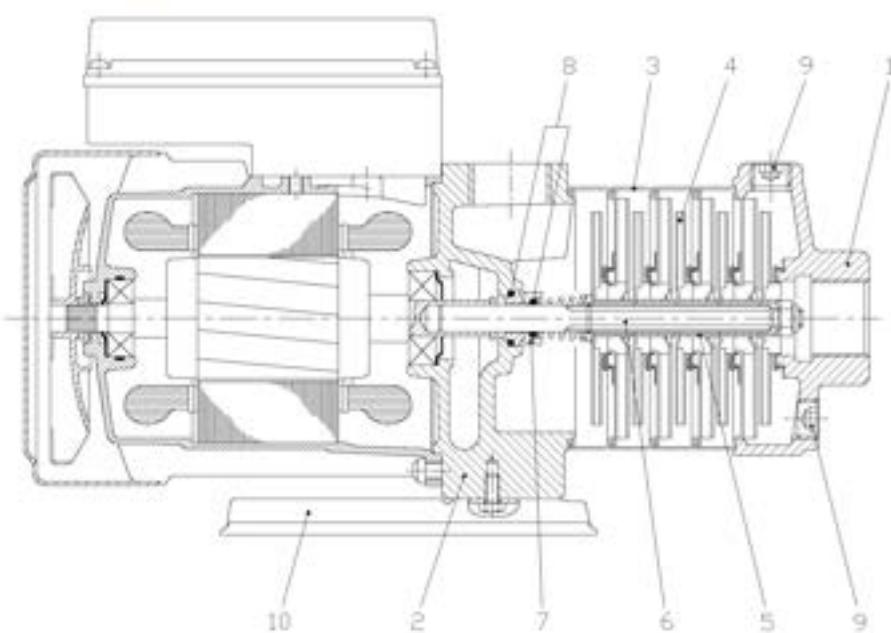

## DID YOU KNOW?

These pumps can be configured in pressure boosting systems?

## Performance Range 50Hz

## Pumps

A horizontal, multistage centrifugal pump is made of stainless steel. The pump is a non-self priming type and fitted with a mechanical shaft seal.

CONNECTION / PUMP	JH(N)2	JH(N)4
Suction port:	RP 1	RP 1 1/4
Discharge port:	RP 2	RP 1 1/4
Drain hole, priming hole	475	192

## APPLICATION

- ✓ Water supply and pressure boosting
- ✓ Air Conditioning
- ✓ Water Treatment
- ✓ Heating and cooling of industrial processes
- ✓ Industrial Washing
- ✓ Pressure boosting of process water

## Operating Conditions

Liquid temperature range: 0°C + 110°C  
 Maximum ambient temperature: +40°C  
 Maximum operating pressure: 10 kg/cm²  
 Maximum inlet pressure is limited by maximum operating pressure.

## Motor

Totally enclosed and fan-cooled standard motor.  
 Standard voltages: 1 x 220~240 V, 50Hz  
 3 x 220~240/415Y V, 50Hz  
 Insulation class: F  
 Enclosure class: IP54

## DID YOU KNOW?

These pumps can be configured in pressure boosting systems?  
 Refer to the Site Amenities section for more info

## Liquids Handled

These pumps are designed for pumping non-corrosive, non-explosive, and non-flammable liquids. The liquids to be pumped must also be free of solid matter, sand, fibres, and similar materials. Most common non highly corrosive liquids, oily liquids, hot and cold liquids can be pumped.

The suitability of these pumps for pumping any particular liquids depends upon a number of factors, such as the pH value, contents of chemicals such as chlorides, oils, the temperature of the liquids, etc. Please contact your distributor or the factory if there are any questions as to whether certain liquids are suitable for pumping with these pumps.

## Mains Booster

# MULTI-STAGE VERTICAL PUMPS

PAGE  
164

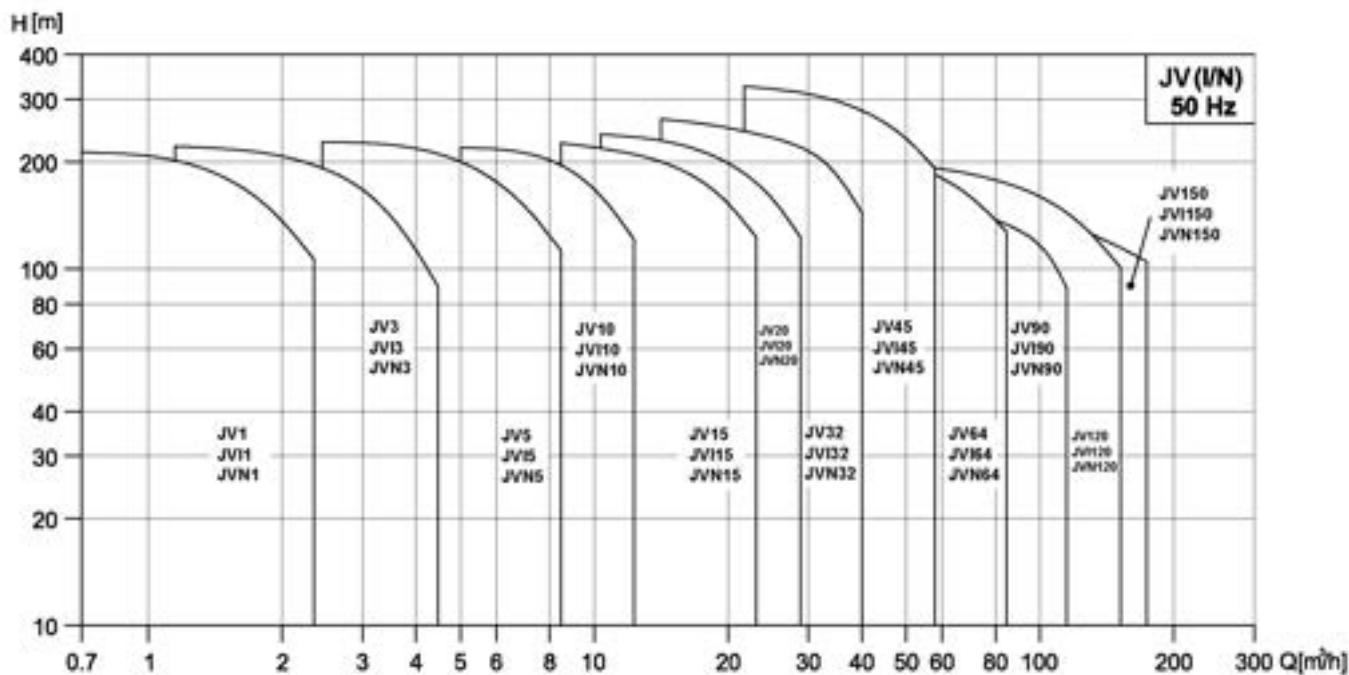

The JV, JVI and JVN series are a non-self priming vertical multistage centrifugal pumps of inline design, flanged, threaded or with Victaulic coupling, equally sized suction and discharge ports, stage construction with stainless steel impellers, chambers and pressure casing.

Pump stub shaft and motor shaft of the IEC-standard motor are directly close coupled. All pumps are equipped with a cartridge type mechanical seal for easy maintenance. The JV, JVI and JVN pumps have a range of different pump sizes and various numbers of stages to provide the flow and the pressure required.

## Applications

Water supply and pressure boosting: Pressure boosting in buildings, hotels, residential complexes, pressure booster stations, supply of water networks, pressure boosting for industrial water supply.

Light industry: Washing and cleaning systems, car washing facilities fire fighting systems, process water systems, machine tools (cooling lubricants).

Heating, ventilation and air-conditioning: boilers, induction heating, heat exchangers, refrigerators, cooling towers and systems, temperature control systems.

Irrigation and agriculture: greenhouses, sprinkler irrigation, flood irrigation.

Water Treatment: Water softeners and demineralisation, reverse osmosis systems, distillation systems, filtration, ultra-filtration system.

## Pump

The JV, JVI and JVN pumps are non-self priming vertical multistage pumps of inline design, threaded, flanged or with Victaulic coupling with equally sized suction and discharge ports. Multistage construction with stainless steel impellers, chambers and pressure casing. Pump shaft & motor shaft of the IEC-standard motor are directly close coupled.

All pumps are equipped with a cartridge type mechanical seal for easy maintenance.

JV, JVI and JVN pumps are available in many different sizes and stages, allowing accurate sizing to suit the flow and pressure you require.

## Electric Motors

Squirrel cage, aluminium or cast iron casing up to 45 kW, totally enclosed, fan-cooled, 2-pole standard motor.

Enclosed class: IP55

Insulation class: F

Standard voltage: P2: 0.37 - 3.0 kW : 3 x 220 - 240V/380 - 415 V  
P2: From 4.0 kW 3 x 380 - 415 V

The motors have efficiency values that fall within the range referred to as MEPS2

Ambient temperature: Max. + 40°C

## Nomenclature

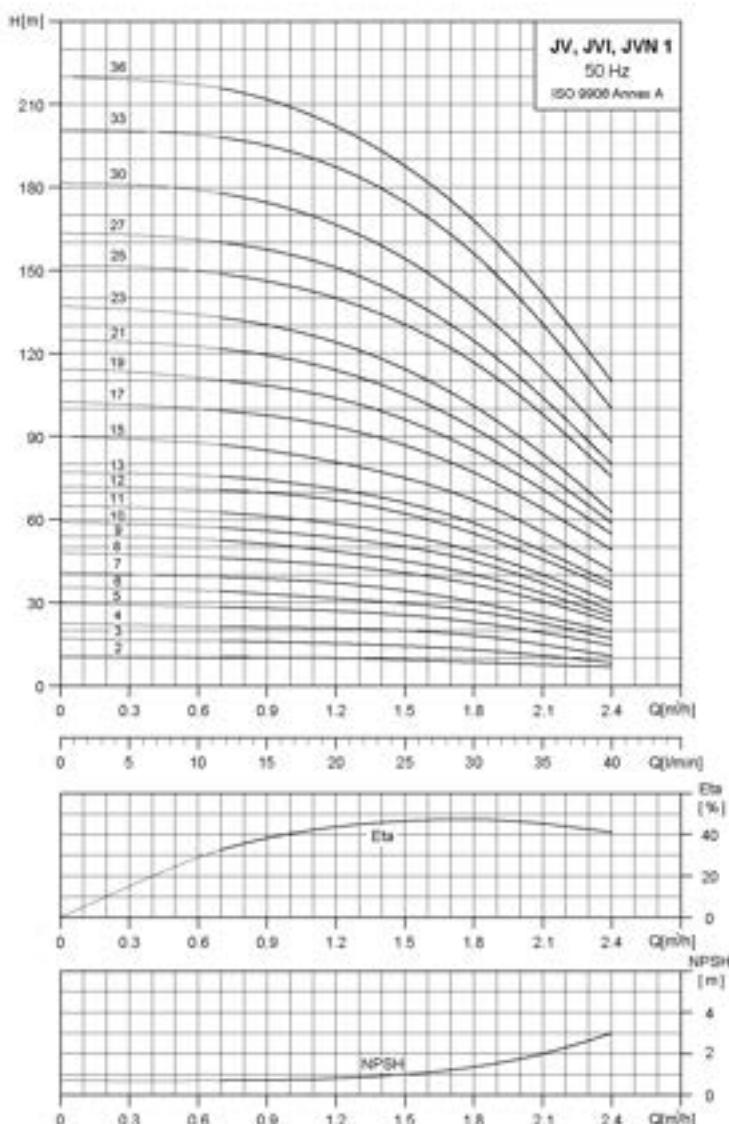

JV	10	5	SQSE
TYPE RANGES	NOMINAL FLOW (M³/H)	NUMBER OF STAGES	CODE OF SHAFT SEAL

## Mechanical Seals

Standard Cartridge type mechanical seal made of Silicon Carbide/Silicon Carbide/EPDM or Viton. Based on the type of application, alternative materials are available for the seal and the elastomers. The cartridge type mechanical seal can be replaced in minutes without special tools and without dismantling the pump.

# BOREHOLE PUMPS

PAGE  
182

## Overview

The Sabre Borehole ranges of submersible pumps are made of corrosion and abrasion resistant stainless steel and have been developed in accordance with state-of-the-art technology. The JB 4" pumps are manufactured to the highest standards for energy efficiency, dependable performance, rugged construction, and long service life.

## Applications

- Potable water supply from deep wells
- Municipal and industrial
- Agricultural irrigation, livestock watering, etc.
- Pressure boosting
- Mine dewatering
- Fountains, etc.

## Pumped Liquids

- Clean, non-corrosive and non-abrasive liquids.

## Operating conditions

- Max. Ambient temperature (Liquid): 30°C
- Sand content: Max. 50g/m<sup>3</sup>

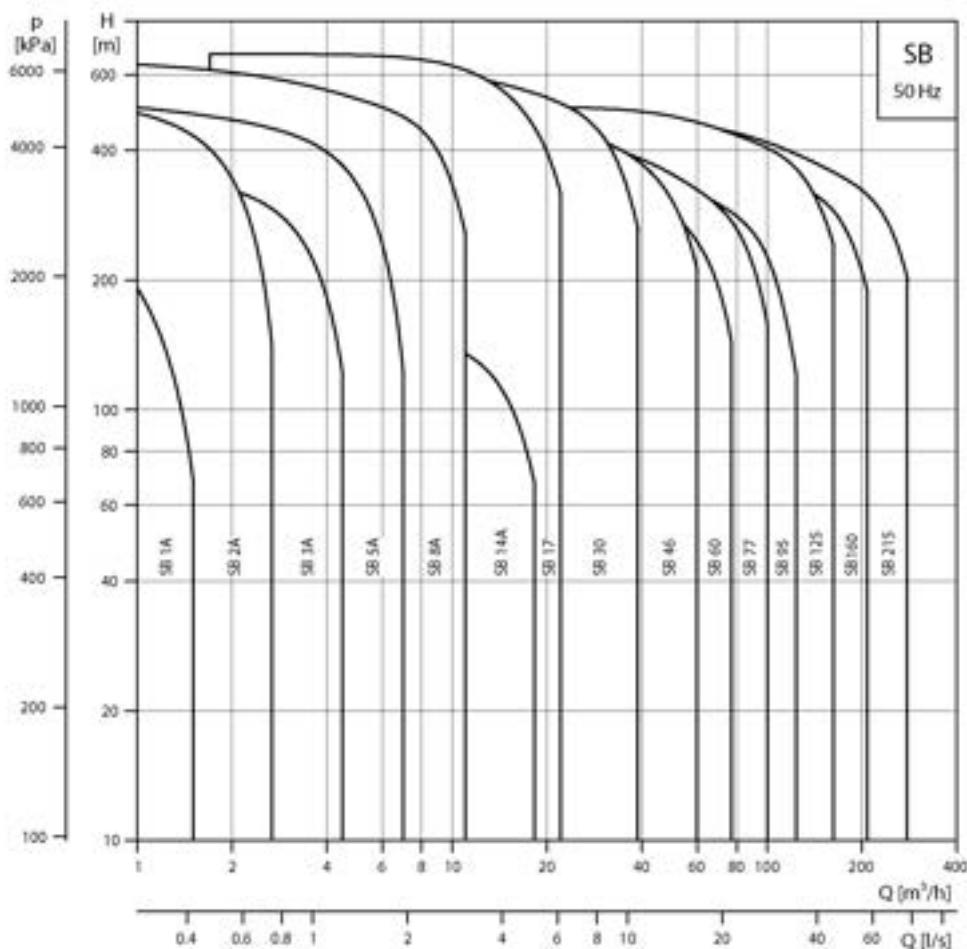

## Features

- Stainless steel construction designed and built for years of trouble free operation
- All metal parts are made of 304 stainless steel, except for the shaft, which is made of 431 stainless steel.
- Heavy duty stainless steel discharge head with built-in check valve for long life and ease of installation
- Smooth safety hook
- Mounting specifications are according to NEMA standards
- High quality shaft bearings providing low friction and high wear resistance
- Heavy duty stainless steel impellers & diffusers ensuring optimal performance
- Stainless steel strainer to restrict the entry of sand and other extraneous material

## Specifications

SIZE	CAPACITY (M <sup>3</sup> /H)

4"	0.3	18	285m
6"	3	78	433m
8"	12	120	412m
10"	16	280	502m

SB Submersible Pumps are made of corrosion and abrasion resistant stainless steel and have been developed in accordance with state-of-the-art technology. The SB series of pumps are manufactured to the highest standards for energy efficiency, dependable performance, rugged construction and long service life for the most demanding applications.

## General Information

Manufacturing diffusers, impellers, suction case, discharge case of stainless steel provides maximum strength, durability, wear and tear resistance.

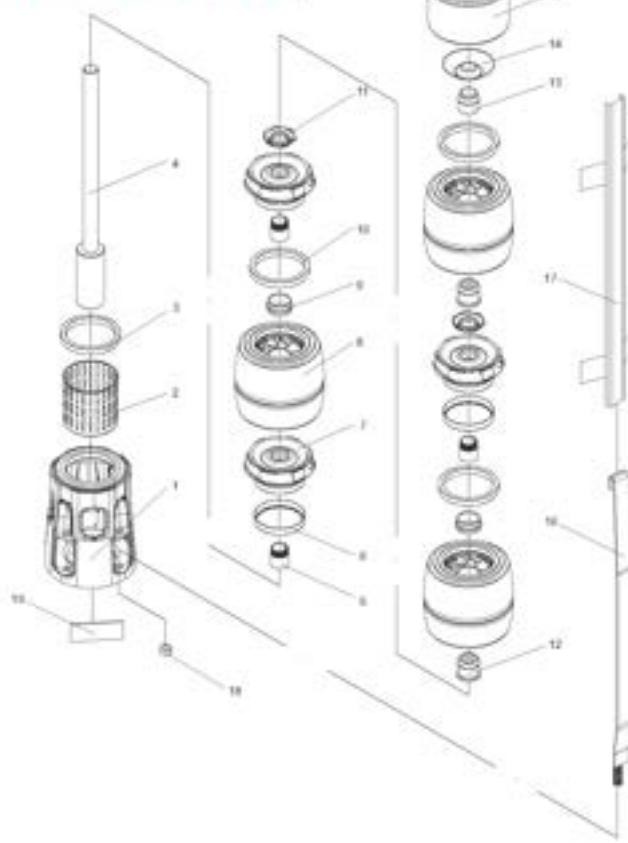

Rubber bearings are water lubricated and have sand channels to enable the sand particles to leave the pump with the pumped liquid.

The stainless steel strainer prevents particles over a certain size from entering the pump.

- Long life
- High efficiency
- High durability and solid construction
- Easy service operation
- Suitable connection in NEMA standards
- Water lubricated rubber bearing
- Built-in checkvalve to prevent back flow

## Technical Drawing

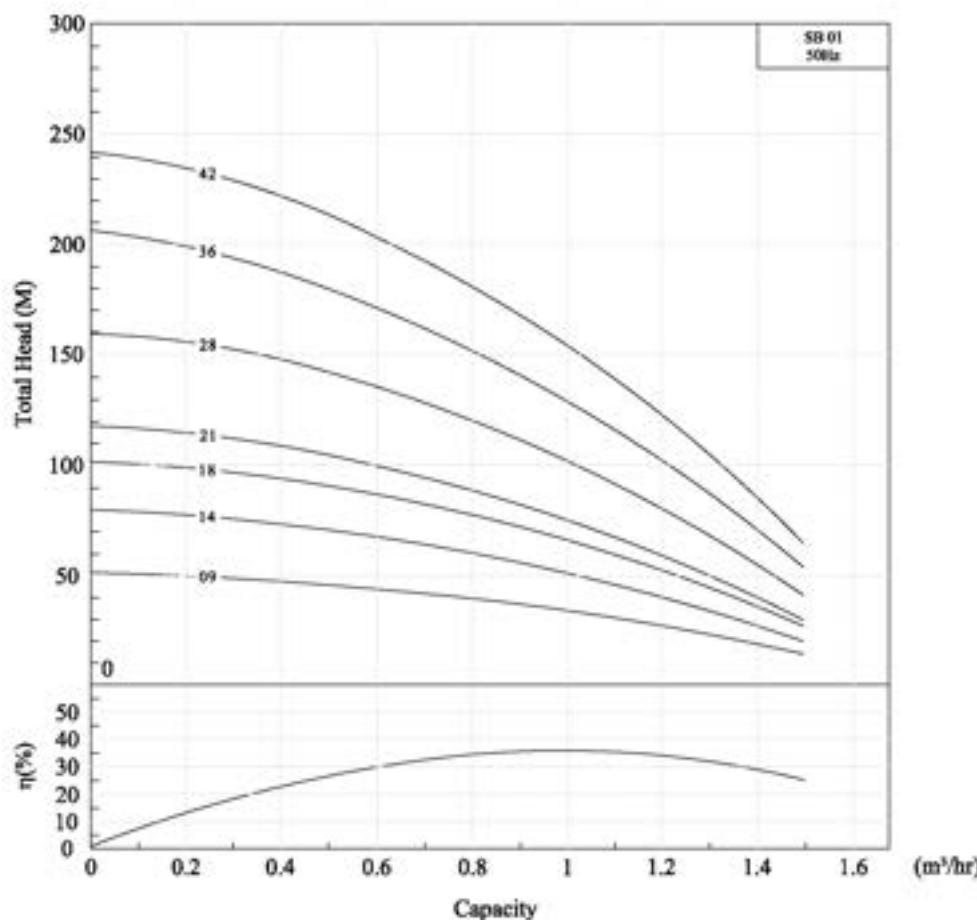

## Parts List

NO.	PART NAME	MATERIAL
1	Suction Case	Stainless Steel (AISI 304L)
2	Filter	Stainless Steel (AISI 304)
3	Suction Case Wear Ring	Bronze (ASTM B145-4A)
4	Pump Shaft	Stainless Steel (AISI 420)
5	Collet	Stainless Steel
6	Impeller Wear Rings	Stainless Steel (AISI 304)
7	Impeller	Stainless Steel (AISI 304L)
8	Diffuser	Stainless Steel (AISI 304L)
9	Rubber Bearing	Rubber
10	Diffuser Wear Ring	Rubber
11	Nut For Stop Ring	Stainless Steel (AISI 304L)
12	Bearing	Rubber
13	Shaft Stopper	Bronze (ASTM B145-4A)
14	Valve	Stainless Steel (AISI 304)
15	Discharge Case	Stainless Steel (AISI 304)
16	Tie Rod	Stainless Steel (AISI 304L)
17	Cable Guard	Stainless Steel (AISI 304)
18	Tie Rod Nut	Stainless Steel (AISI 303)
19	Name plate	Stainless Steel (AISI 304)

Revolution	2900 rpm
Shaft diameter	22 mm
Max. sand content	50 gr / m³
Valve cap	Stainless steel
Voltage	380-415 V (+%6 / -%10)
Frequency	50 Hz.
Max. water temperature	30°C (50°C optional)
Degree of protection	IP 68

## MATERIALS

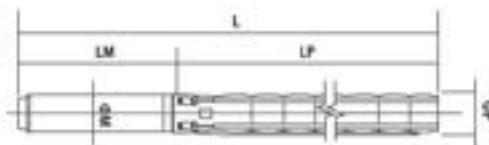

Diffuser	Stainless steel (AISI 304L)
Impeller	Stainless steel (AISI 304L)
Pump shaft	Stainless steel (AISI 420)
Coupling	Stainless steel (AISI 420)
Strainer	Stainless steel (AISI 304)

## Performance curve

Due to a continuous improvement in design we reserve the right to amend specifications or make additional price changes.

HEAD (M)

## FLEXIBORE 200 FLEXIBLE RISING MAIN

### Product Description

#### Description

Flexibore is a flexible riser used for ground water pumping. By integrating thermoplastic polyurethane into a woven textile fabric of high tenacity polyester, the hose is produced. This process gives the hose flexibility while sustaining the weight of a submersible pump.

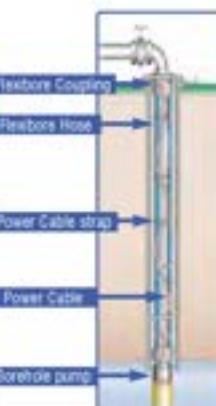

#### Compatibility

Flexibore will suit many borehole applications and is compatible with most submersible pumps. The sizes range from 40mm to 200mm internal diameter and depths of up to 250m.

### Applications

#### Typical Applications

These include mine de-watering, domestic and municipal water supply, test pumping, rural and industrial bore-water retrieval and similar ground water projects.

#### General Application

Flexibore has been specifically designed to replace rigid riser pipes such as steel which is subject to rust and encrustations. This internal scaling reduces flow rates and pump efficiency. Other risers such as PVC and polypipe can be brittle or bend. They are also generally heavier and hard to handle.

## FLEXIBORE 200 FLEXIBLE RISING MAIN

### Ease of Use

#### Easy Installation

Once in the field, Flexibore is attached to the pump with the patented couplings. The pump, with hose and cables attached, is lowered into the bore using either a simple rolling wheel or a crane. See our installation brochure for further details.

#### Transportable

With its continuous length, the hose can be installed with less time and labour than rigid systems, this includes poly pipe. The same advantages apply to pump retrieval.

### Benefits

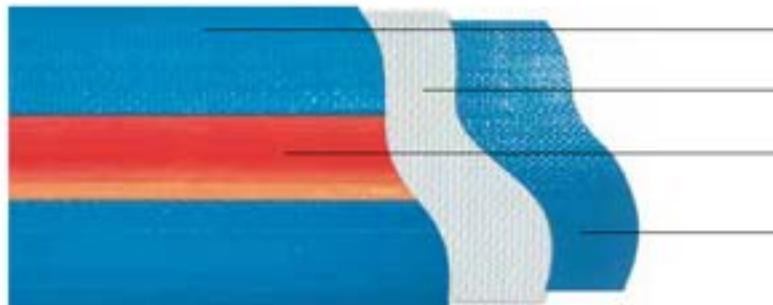

#### Benefits and Cost Saving Features

- ✓ Quick and easy installation and retrieval
- ✓ No internal scaling
- ✓ Totally corrosion resistant
- ✓ Reduced head losses and improved flow rates due to swelling under pressure
- ✓ Less labour intensive due to ease of installation
- ✓ Reduced transport costs due to light weight and easy handling
- ✓ Custom lengths made to order
- ✓ Potable water approved: AS 4020
- ✓ All hydrostatically tested

## FLEXIBORE 200 FLEXIBLE RISING MAIN

Tough polyurethane cover

Woven polyester fabric

Strip with loops every meter from which to secure power cable

Impregnated polyurethane lining bonded to outer cover which eliminates separation

Each hose is covered by a 5 year pro-rata warranty against faulty materials and workmanship.

# SUBMERSIBLE PUMPS

PAGE  
204

PAGE  
214

PAGE  
228

Submersible pumps are designed, as the name suggests to be totally submerged in the pumped liquid. The motor is generally encapsulated and filled with oil, which is separated from the pumped liquid by a mechanical seal. These pumps are designed primarily to pump sewage or industrial wastewater from either pits or tanks, with the pumped liquid occasionally containing solids.

Submersible pumps can be installed into tanks on a guide rail system with quick connect discharge fittings, this allows for quick installation into existing situations as a retro fit option as well as the ease of removal for maintenance. Pumps can also be controlled via float switches or manual on/off operation depending on the application requirements.

Submersible pumps are available in either cast iron or stainless steel depending on the application requirement and come in a variety of styles, depending on the impeller design, and are typically used to pump sub soil water, storm water, grey water, sewage and industrial waste water.

The options available include:

- Vortex
- Drainage
- High head
- High flow
- Cutter
- Grinder

Along with the Sabre range of submersible pumps which suit all applications, we also carry the Rhino brand which is a range of air operated submersible pumps for dewatering applications and ABS range - industry leaders in dewatering submersible pumps.

#### Some of the advantages of ABS range of pumps include:

##### **1 Easy start**

- plug-in without worrying about overheating

Built-in contactor connected to the thermal sensors in the stator windings protects the motor from over-heating and features an automatic restart function.

##### **2 Wear resistance**

- one investment, years of cost efficient pumping

Impeller in high chrome alloy steel with full upper shroud and adjustable wear parts in oil resistant nitrile rubber secure a long lifetime and high efficiency.

##### **3 Reliable operation**

- minimises time for maintenance

Double outer casing and good heat convection enables pump to operate continuously at low levels or even run dry without damaging the motor.

First class materials like outer casing in stainless steel, cast parts in lightweight aluminium alloy, mechanical shaft seals in silicon carbide grant a pump you can rely on.

##### **4 Serviceability**

- save time and money by easy on-site service

Due to modular design, the same parts can be used for different pumps, which lowers overall service costs. By removing the top cover of the pump you can easily check the electrical junction box. For protection the motor is separately sealed from the junction box. Environmentally safe white oil is used in the oil casing for easy inspection of seal conditions. For J205 and J405 service is made even easier due to a mechanical seal cartridge.

## MODEL ADVS

## High Volume Non-Clogging 2 Poles Motor

- Solid Pass 33 - 0.55mm
- Liquid temperature: 0°C to 40°C
- HP Range: 1HP to 5HP / 0.75kW TO 3.7kW
- PH: 6 to 8
- Rated Speed: 2900/3450rpm
- Protection Class: IP68
- Maximum depth: 8m

Guard rail kits are available for easy removal and reinstallation.

Impeller Design

## SEMI-VORTEX IMPELLER

Offers non-clog operations with high pumping efficiency and allows pumping the water containing impurities under 70% of the discharge size.

## PROTECTION

Quick acting dual response provides protection against overload.

## DOUBLE MECHANICAL SEAL IN OIL CHAMBER

Provides strong and reliable shaft sealing

## APPLICATIONS

Ideal for waste water application containing soft or fibrous solids

Industrial waste water drainage

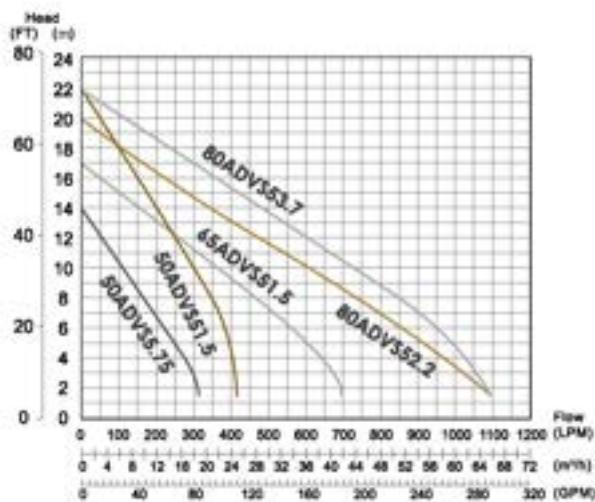

Septic effluent

Miscellaneous drainage

## EASY MAINTENANCE

For the semi-vortex design with no strainer or close tolerance suction cover, only 3 or 4 bolts need to be removed for quick and easy maintenance.

Miscellaneous drainage

### SEMI-VORTEX IMPELLER

Offers non-clog operations with high pumping efficiency and allows pumping the water containing impurities under 70% of the discharge size.

### EASY MAINTENANCE

For the semi-vortex design with no strainer or close tolerance suction cover, only 3 or 4 bolts need to be removed for quick and easy maintenance.

### DOUBLE MECHANICAL SEAL IN OIL CHAMBER

Provides strong and reliable shaft sealing

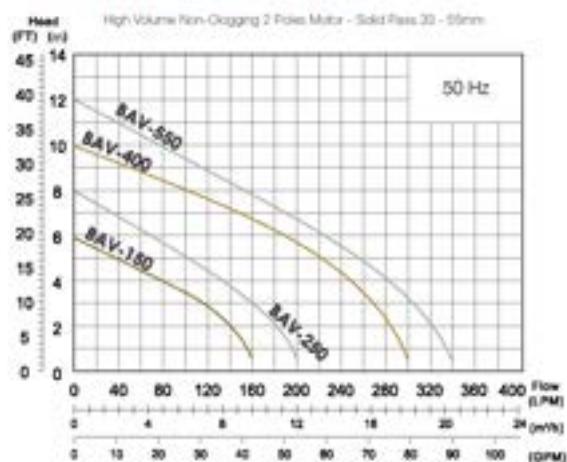

### PROTECTION

Quick acting dual response provides protection against overload.

### AUTOMATIC OPERATION

Equipped with float switch and control box is optional

MOTOR (THREE PHASE)	1.5kW motor, 6 amps, 2900 RPM, 50Hz, 415 Volt, 30 NEMA ,Requires Overload Protection in the Control Panel, Oil Filled, Class F
OPTIONAL EQUIPMENT	Seal Materials, Additional Cable Lengths, Guide Rail Systems, Complete Pump, Tank & Control Packages, Multiple Pump Systems

## IMPELLER

Two Ductile Iron castings for superior quality and long life  
Recessed impeller provides high head & non-overloading performance  
Recessed (vortex) design reduces bearing load/increases bearing life  
Recessed Impellers prevent clogging

MOTOR

- Single phase and three phase available
- Capacitor start / run design for assured starting, strong torque and grinding under heavy load (single phase only)
- Pressed stator for precise shaft / bearing alignment, long life
- Utilises a low voltage, stress-free electronic start switch
- Internal overload protection
- Dual ball bearings (upper and lower)

## SHAFT SEALS

Single "Type 1" Silicon Carbide / Silicon Carbide / Neoprene Mechanical Seal with Neoprene Lip Seal

CUTTER ASSEMBLY

Hardened 440SST (56-60 Rockwell)  
shredding ring & grinding impeller  
11,500 cuts/second... 690,000  
*cycles/minute*

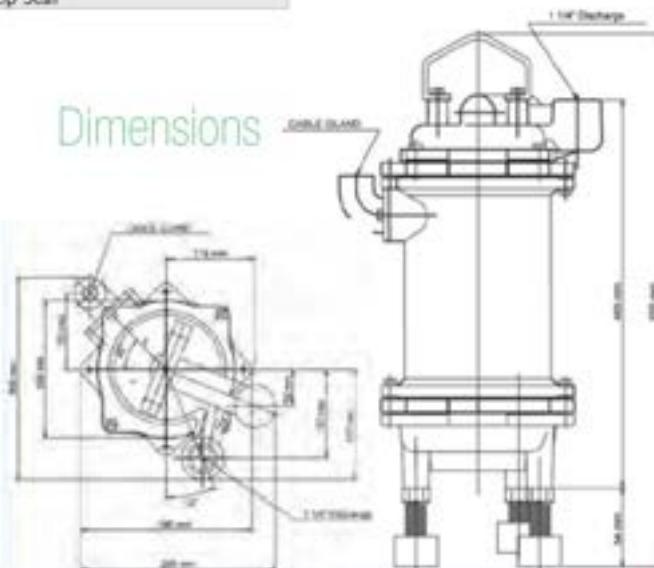

#### OIL-FILLED MOTOR PROVIDES

Constant bearing lubrication  
Maximum motor cooling, even  
temperature distribution

**OPTIONAL**

Guide rail system for easy removal of pump

## Dimensions

## DML SERIES

## Sewage Pump with Single Channel impeller

## SPECIFICATIONS

Submersible sewage pump with non-clog, single channel impeller  
Maximum solids handling: 76mm  
Maximum liquid temperature: 40°C  
Maximum submergence: 8m

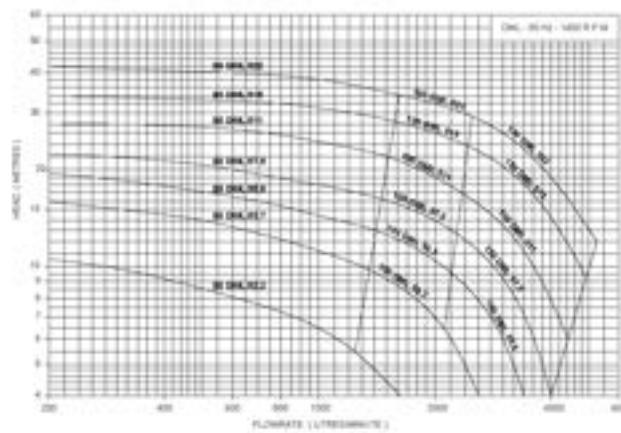

## MATERIALS

Pump casing: Cast Iron  
Impeller: Cast Iron  
Suction cover: Cast Iron  
Shaft: 403 Stainless Steel  
Motor frame: Cast Iron  
Fasteners: 304 Stainless Steel  
Mechanical seal: Double mechanical seal in oil lubricated chamber, Silicon carbide lower faces, Carbon/Ceramic upper faces

## FEATURES

Robust cast iron construction  
Single channel impeller  
Double row lower bearing  
1450 RPM  
Class F  
Air filled submersible motor  
Double mechanical seal in oil chamber with SIC/SIC lower faces and carbon/ceramic upper faces.  
Built in overload protection or klixon

## DC12 SERIES

## SWITCH

The ON - OFF switch is located inline on the power cord.

## PUMP

This pump unit is a totally enclosed submersible pump. It is powered by a 0.25 kW, 12 volt DC, 20 amp motor. Battery clamps on the power cord for ease of connection to any 12 volt vehicle battery.

## HOISTING &amp; LOWERING

Use the attached nylon line. Do not use the power cord for handling the unit.

## OPERATING OF UNIT

Lower the unit into the liquid to be pumped (Note: This unit is not for pumping flammable liquids.) Turn on the switch. Pump can be run for a few minutes (less than 5 mins) without pumping liquid. Do not run completely dry for any extended period more than 5 mins. This will prevent damage to the shaft and seal.

## OVERLOAD PROTECTION

Overload protection is provided with an "Inline" 25 amp fuse. Location is approximately 150mm below red (positive) battery clamp. The unit uses a standard automotive 25 amp fuse.

## SABRE 12 VOLT

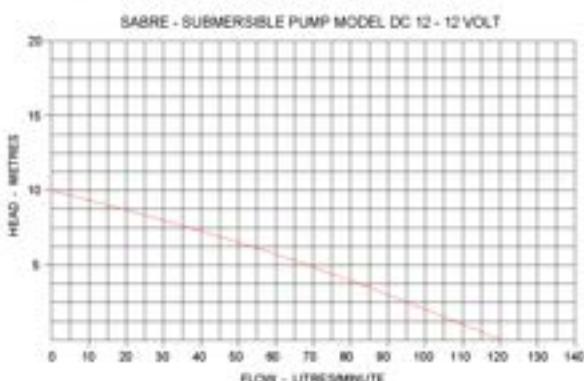

## BATTERY CONNECTION

Check the position of the ON-OFF switch make certain the switch is in the OFF position before connecting to the battery, using this connection procedure eliminates arcing. Connect the RED battery clamp to the POSITIVE battery terminal. Connect the BLACK clamp to the NEGATIVE or ground to a rigid metallic surface on the engine. The connection should be 30 to 40 cm from the battery.

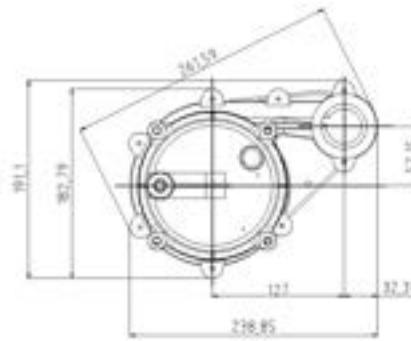

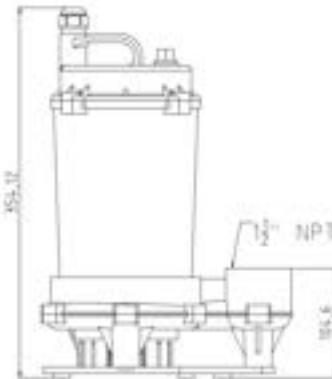

## RUNNING TIME PERIODS

The unit draws 20-25 amps and can be operated for approximately 1 hour on a fully charged 60 amp-hour battery and still be able to start the vehicle under normal conditions. Caution should be used when running times exceed 25-30 minutes without the engine running to recharge the battery. Also be mindful of cold temperatures which lowers battery efficiency. Review battery size (AMP-Hour rating) and the use of other accessories & lights etc while operating pump without the engine operating.

## Submersible Drainage Pump Type ABS XJ

Submersible drainage pump type ABS XJ is excellent for pumping water and dirty water mixed with light abrasives. The slim design makes the pump easy to move and easy to handle.

### ① Easy and fail-safe starting

Instead of a built-in contactor, an optional AquaTronic unit can be used. The AquaTronic unit compensates for incorrect phase order, which ensures correct motor rotation every time.

### ② Wear resistance

An impeller and wear ring in white cast iron, as well as diffusers coated in oil-resistant nitrile rubber, provide high abrasion resistance.

### ③ Reliable operation

Double mechanical shaft seals in an oil bath, with primary seal surfaces in silicon carbide and secondary seal surfaces in silicon carbide on carbon, extend the life of the pump. A double cable-entry seal system increases the protection against moisture entering the electrical junction area. A double outer casing and good heat convection enable the pump to operate continuously at low levels – or even run dry without damaging the motor.

### ④ Serviceability

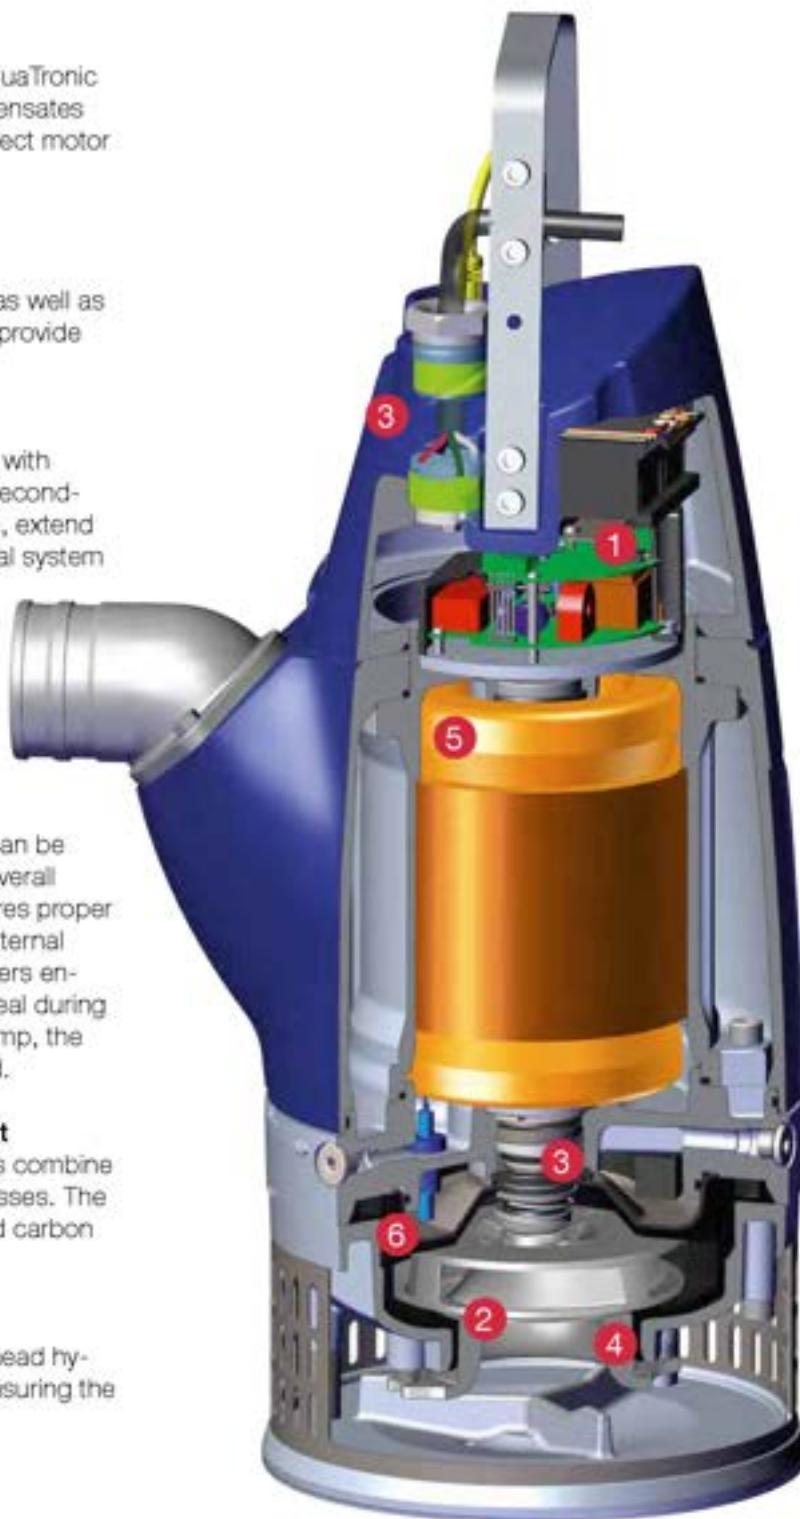

Due to the modular design, the same parts can be used for different pumps, which lowers the overall service costs. The adjustable wear ring ensures proper clearance throughout the impeller lifetime. External inspection ports for the oil and motor chambers enable quick and easy evaluation of the shaft seal during service. By removing the top cover of the pump, the electrical junction area can easily be checked.

### ⑤ Less energy and environmental impact

The high-efficiency motor and new hydraulics combine with low-friction bearings to reduce power losses. The result is low total energy costs and minimized carbon footprint.

### ⑥ Flexibility

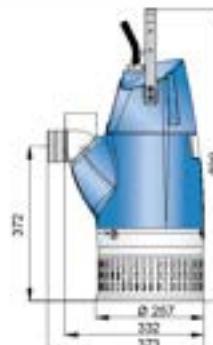

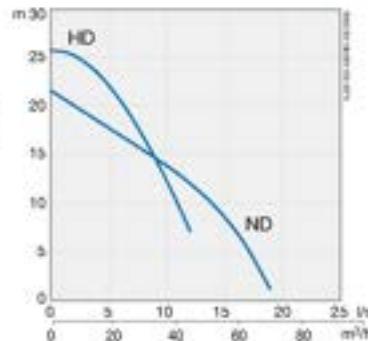

Conversion between high-volume and high-head hydraulics is managed with only a few parts, ensuring the right performance for the application.

## SUBMERSIBLE DRAINAGE PUMP

## TYPE ABS XJ 25

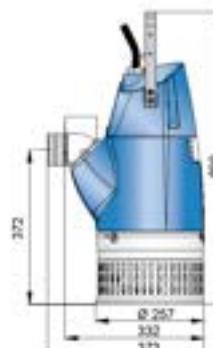

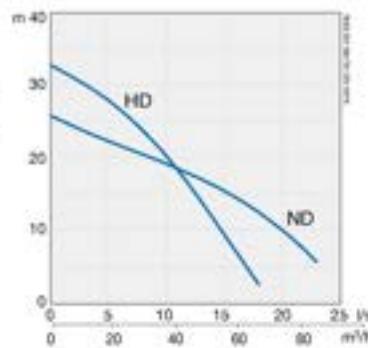

XJ 25 ND*	MEDIUM HEAD
XJ 25 HD*	HIGH HEAD
Motor rating P2	2.5 kW, 3~

\* Option: AquaTronic, built-in electronic pump control.

\*\* Max measurement based on largest discharge size.

## Submersible Drainage Pump Type ABS J 205, 405, 604

Submersible drainage pump type ABS J is suitable for pumping water and dirty water mixed with light abrasives. The pump design enables convenient transport, handling and installation.

### **1** Easy to start

Pump J 205 has a built-in contactor connected to the thermal sensors in the stator windings, which protects the motor from overheating and features an automatic restart function. Pumps J 405 and J 604 have thermal sensors in the stator windings that protect the motor from overheating by means of an external control panel.

### **2** Wear resistance

Abrasive-resistant impellers, combined with diffusers and wear rings coated in oil-resistant nitrile rubber, provide extended pump life in tough applications.

### **3** Reliable operation

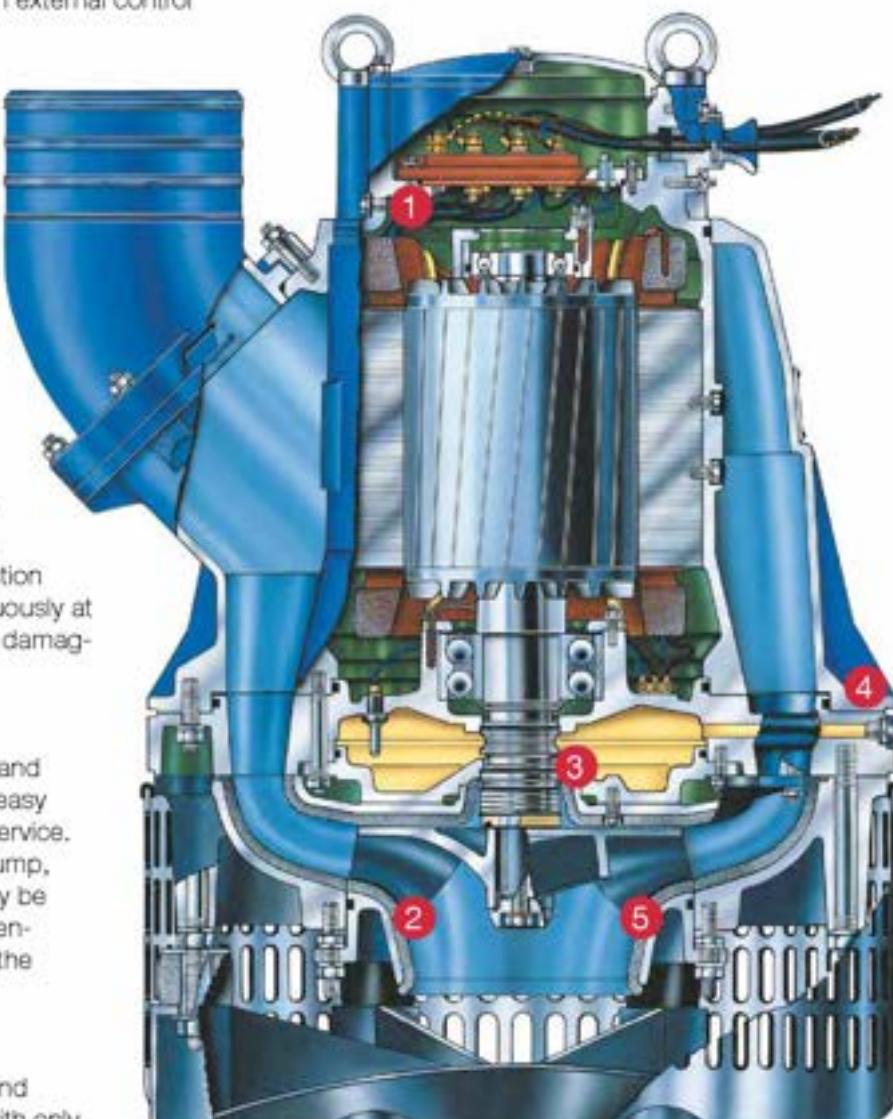

Double mechanical shaft seals in an oil bath, with primary seal surfaces in silicon carbide, extend the life of the pump. In pumps J 205 and J 405, the primary and secondary seals comprise an easy-to-replace seal cartridge. A double outer casing and good heat convection enable the pump to operate continuously at low levels – or even run dry without damaging the motor.

### **4** Serviceability

External inspection ports for the oil and motor chambers enable quick and easy evaluation of the shaft seal during service. By removing the top cover of the pump, the electrical junction area can easily be checked. The adjustable wear ring ensures proper clearance throughout the impeller lifetime.

### **5** Flexibility

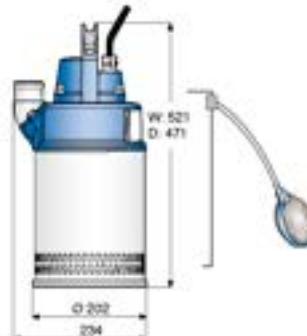

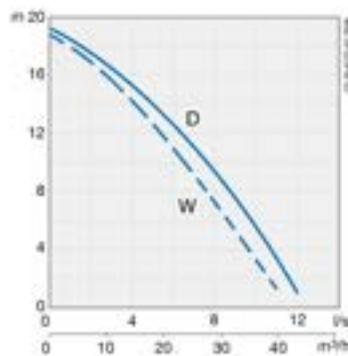

Conversion between high-volume and high-head hydraulics is managed with only a few parts, ensuring the right performance for the application.

Electric cable	20 m

## Submersible Drainage Center-Line Pump Types ABS JC and XJC

Submersible drainage center-line pump types ABS JC and XJC are excellent for pumping water and dirty water mixed with light abrasives. The slim design makes them easy to move and easy to handle, and they are perfect for applications with limited installation space.

### ① Easy and fail-safe starting

In XJC pump models, an optional AquaTronic unit can be used instead of a built-in contactor. The AquaTronic unit compensates for incorrect phase order, which ensures correct motor rotation every time. In JC pump models, a built-in contactor with an automatic restart function protects the motor.

### ② Wear resistance

An impeller and wear ring in white cast iron, as well as diffusers coated in oil-resistant nitrile rubber, provide high abrasion resistance.

### ③ Reliable operation

Double mechanical shaft seals in an oil bath, with primary seal surfaces in silicon carbide and secondary seal surfaces in silicon carbide on carbon, extend the life of the pump. Pumps XJC 50 and XJC 80 have a double cable-entry seal system that increases the protection against moisture entering the electrical junction area. A double outer casing and good heat convection enable the pump to operate continuously at low levels – or even run dry without damaging the motor.

### ④ Serviceability

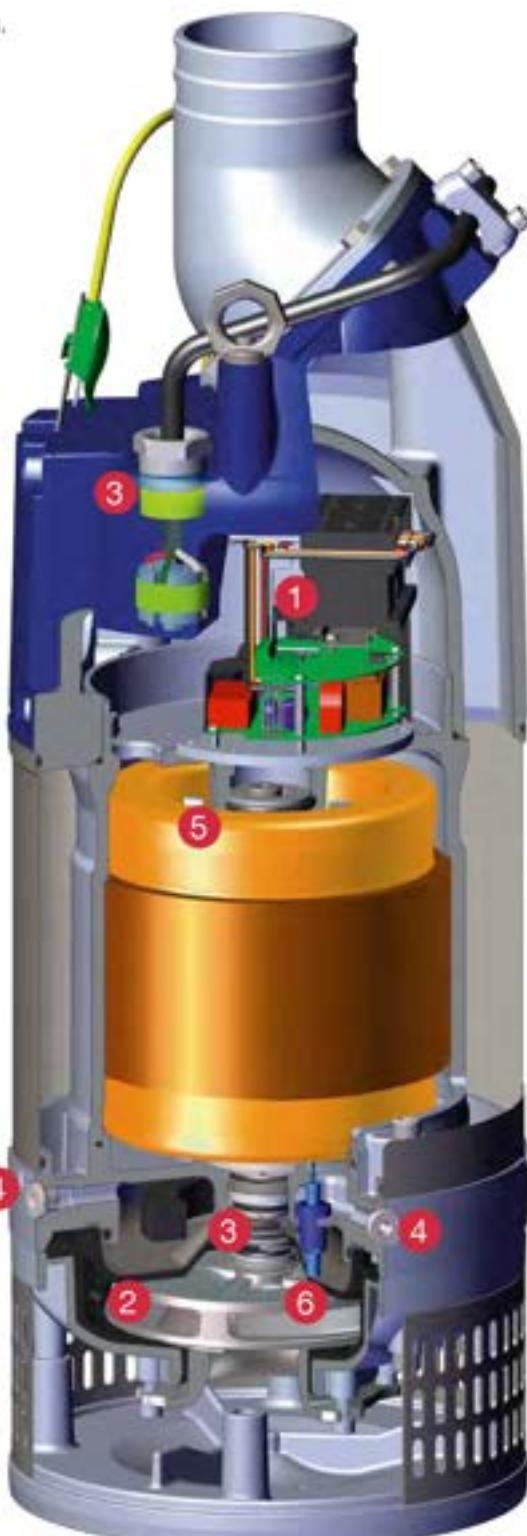

Due to the modular design, the same parts can be used for different pumps, which lowers the overall service costs. The adjustable wear ring ensures proper clearance throughout the impeller lifetime. External inspection ports for the oil and motor chambers enable quick and easy evaluation of the shaft seal during service. By removing the top cover of the pump, the electrical junction area can easily be checked.

### ⑤ Less energy and environmental impact

Pumps XJC 50 and XJC 80 are equipped with high-efficiency motors and new hydraulics, which combine with low-friction bearings to reduce power losses. The result is low total energy costs and minimized carbon footprint.

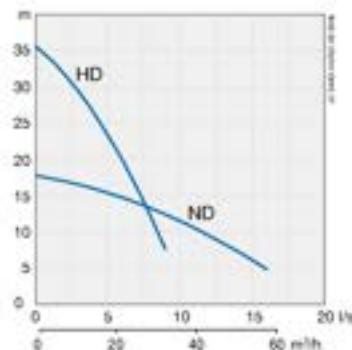

### ⑥ Flexibility

Pumps XJC 50 and XJC 80 allow conversion between high-volume and high-head hydraulics with only a few parts, ensuring the right performance for the application.

\* Option: AquaTronic, built-in electronic pump control.

## Submersible Sludge Pump Type ABS XJS

Submersible sludge pump type ABS XJS is excellent for pumping dirty water and water mixed with solids. The slim design makes the pump easy to move and easy to handle.

### ① Easy and fail-safe starting

Instead of a built-in contactor, an optional AquaTronic unit can be used. The AquaTronic unit compensates for incorrect phase order, which ensures correct motor rotation every time.

### ② Clog-free pumping

A free-flow vortex impeller and pump volute make the pump ideal for pumping solids. The impeller is available in different sizes to meet specific requirements.

### ③ Reliable operation

Both the impeller and volute are made from heavy-duty ductile iron for maximum durability. Double mechanical shaft seals in an oil bath, with primary seal surfaces in silicon carbide and secondary seal surfaces in silicon carbide on carbon, extend the life of the pump. A double cable-entry seal system increases the protection against moisture entering the electrical junction area.

### ④ Convenient handling

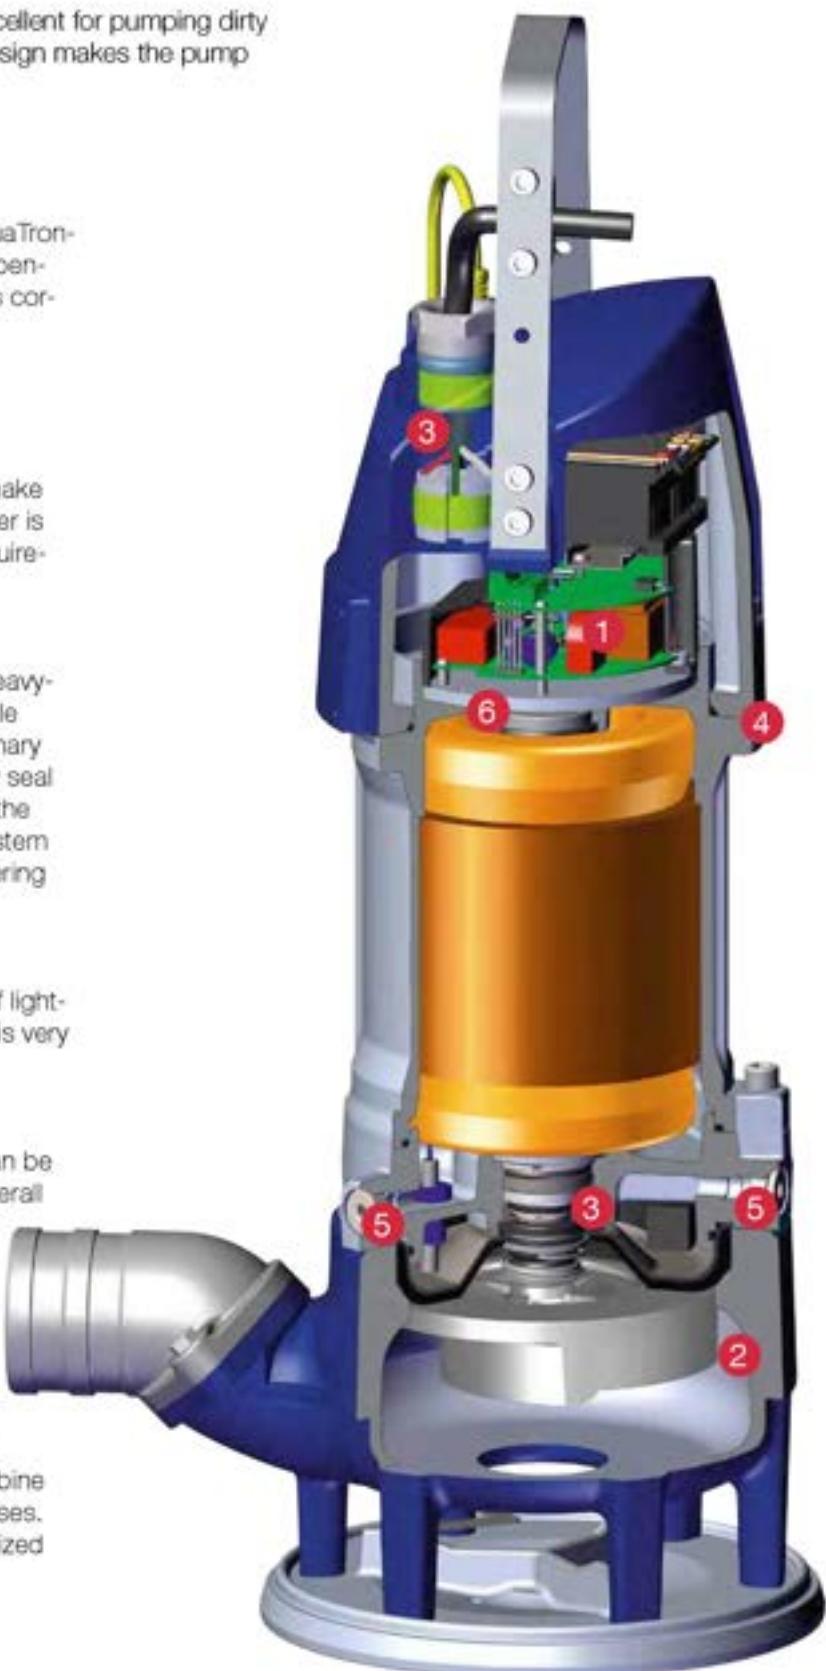

The top cover and motor housing are made of lightweight aluminium, which creates a pump that is very easy to handle and install.

### ⑤ Serviceability

Due to the modular design, the same parts can be used for different pumps, which lowers the overall service costs. External inspection ports for the oil and motor chambers enable quick and easy evaluation of the shaft seal during service. By removing the top cover of the pump, the electrical junction area can easily be checked.

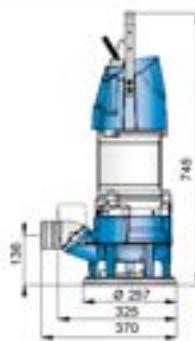

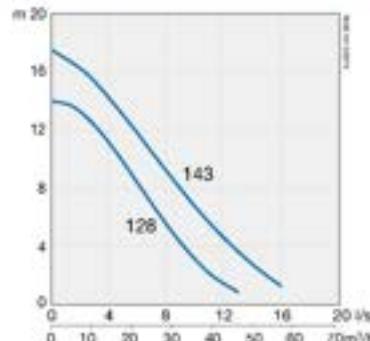

### ⑥ Less energy and environmental impact

The high-efficiency motor and hydraulics combine with low-friction bearings to reduce power losses. The result is low total energy costs and minimized carbon footprint.

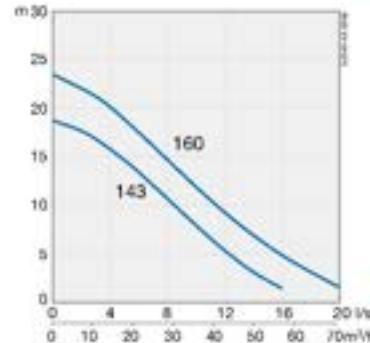

**SUBMERSIBLE SLUDGE PUMP  
TYPE ABS XJS 25**
**XJS 25 D<sup>+</sup> -128

# PIRANHA SUBMERSIBLE GRINDER PUMP 08 - 110

## FEATURES

For the pumping of wastewater containing sewage, offal, organic and industrial effluent  
Piranha 08 and 09 fitted with MF modular motor; Piranha-5 with A5, Piranha PE with XFP Premium Efficiency IE3  
Piranha 08 and 09 available as KS version with float switch  
Small discharge lines from 1 1/4" (DN 32)  
Installations are possible where large ground undulations are present  
Standard and Ex-versions (see motor data below)  
Piranha 08 and 09 have capacitor in upper lid and do not require a control box  
Low installation costs due to small diameter discharge pipework.

## MATERIALS

DESCRIPTION	MATERIAL
Upper Lid *	Stainless steel 1.4301 (AISI 304)
Motor Housing	Cast iron EN-GJL-250
Rotor Shaft	Stainless steel 1.4021 (AISI 420)
Volute	Cast iron EN-GJL-250
Impeller **	Cast iron EN-GJL-250
Fasteners	Stainless steel 1.4401 (AISI 316)

\* Piranha 08 and 09

\*\* Polyamide for Piranha 08

## APPLICATIONS

Piranha submersible pumps have been designed for effective and economic dewatering using discharge lines of small diameter, in private, municipal and industrial areas.  
Sewage removal from living units and houses in remote settlements where the laying of a conventional sewer would be too expensive, where large ground undulations are present or where it is only possible to lay pipe lines of small diameter  
Sewage removal from motorway resting sites, communal buildings and for renovation of buildings or areas of a city  
For use in slaughter houses, food processing plants, paper factories, agriculture and similar areas  
Piranha 08 and 09 are specially designed for private and domestic applications  
Maximum allowable temperature of the medium is 40 °C, or short term to 60 °C (max. 5 minutes)

Piranha 08 - PE110/2E: Minimum sump opening Ø265 mm  
Pedestal base secured using M10 masonry anchor bolts, drill hole size 14 mm  
\* Lowest switch-off point for automatic operation

Piranha S10/4 - S26/2: \*\* To allow the pump to be lowered and fixed correctly to the pedestal,  
the shackle must be fixed to the handle at the point furthest from the guide rail.

Piranha PE55/2E - PE110/2E: Discharge line connection with threaded flange DN 50/2" PN16

Discharge elbow supplied by customer

\*\*\* Hexagon head wood screw 10 x 70 DIN 571 and dowel size 12

# SUBMERSIBLE SEWAGE PUMP XFP 100J - 600X

## MOTOR

Water pressure sealed premium efficiency motors, (3-phase, squirrel cage Induction motors), from 15 to 350 kW and, depending on hydraulic requirements as 4- to 12-pole versions.

Voltage: 400 V3~, 50 Hz (other voltages on request).

Insulation material: H (motor winding protected by temperature sensor 140 °C)

Temperature rise: According to class A

Protection type: IP68

Start-up: direct on line (DOL), soft starter or star-delta

## CONSTRUCTION

Energy saving premium efficiency motor in accordance with IE3 of IEC 60034-30, exceeding EFF1 of CEMEP regulation

The water-tight fully flood-proof motor and the pump section form a compact and robust unit, easy to clean and easy to service

Water pressure sealed connection chamber, with two stage cable entry, protected against excessive cable tension and bending

Bimetallic thermal sensors in the stator which open at 140 °C

Rotor and rotor shaft dynamically balanced, upper and lower bearings lubricated-for-life, maintenance-free

Triple shaft sealing

Upper and lower sealing by means of a silicon carbide mechanical seal, independent of the direction of rotation

Inspection chamber with sensor for moisture protection to indicate water leakage through mechanical seal

Option: Blockage- and maintenance-free internal closed looped cooling system. Cooling medium: Glycol - water mixture (standard for PE6 range)

Hydraulic parts with various impeller options: 2- or 3-channel Contrablock, 2- or 3-channel closed or 3-channel skew

These pumps are built as standard in ATEX explosion-proof version in accordance with international standards e.g. Ex d IIIB T4/ATEX II 2Gk

## Standard and options

DESCRIPTION	STANDARD	OPTION
Max. ambient temperature	40 °C	60 °C
Max. submergence depth	20 m	
Mains voltage	380...420 V/50 Hz	230 V, 690 V/50 Hz
Voltage tolerance	± 10 % at 400 V	
Insulation class	H (140)	H (160) (not for explosion-proof)
Start-up	DOL (direct on line), star-delta or soft starter	
Approval	Ex/ATEX	
Cables	S1BN8-F	EMC shielded cables
Cable length	10 m	15 m, 20 m, other length on request
Mechanical seal (medium side)	SIC-SIC (NBR)	SIC-SIC (Viton execution)
Mechanical seal (motor side)	SIC-SIC	
O-rings	NBR	Viton
Preparation for lifting hoist	Lifting hoop	Lifting hoop in stainless steel
Protective coating	Two component coating epoxy resin	Special coatings on request
Cathodic protection		Zinc anodes on request
Installation	Wet-well	Dry-well vertical/horizontal
Motor cooling	Cooling by surrounding medium	Closed loop cooling system*
Moisture sensor motor housing		DI (sensor for moisture detection)*
Moisture sensor inspection chamber	DI (sensor for moisture detection)	

\* standard for PE6 motor range

## FEATURES, OPTIONAL EXTRAS

### Additional protection for more durable operation

ABS submersible dewatering pumps can easily be added with zinc anode belts providing protection against galvanic corrosion. The cast parts of the pump can also be protectively coated, ensuring trouble free operation when pumping salty or brackish water.

### Series connections for pumping high heads

With minimal effort, the standard ABS drainage pumps can be rebuilt to function in series connected applications for high head pumping. This feature ensures a flexible use of your drainage pumps.

### Polyurethane for prolonged life of the drainage pump

ABS offers diffusers and wear-rings in polyurethane, which increases resistance when pumping fine sand and other abrasive mediums. Polyurethane coated diffusers and wear rings are available as an option on J/JC 24-44, J/JC 54-84, J 205, J 405 and J 604.

### Electronic motor supervision

The FSV 82, electronic motor protector prevents the pump from starting in the wrong direction of rotation. This protection device will also trip the pump in event of phase failure. The FSV 82 features protection against automatic restart in the event that the pump has tripped due to overheating.

### Bottom suction adapter

On pumps types J12, J15 and J24 the standard bottom plate may be replaced by a bottom suction adapter. A basement floor or a tank can be pumped practically dry with this adapter.

### Save time and money on ABS repair kits

ABS offers repair kits to all submersible dewatering pumps. The repair kits include preselected spare parts which secure a fast and efficient maintenance and avoids unnecessary downtime for the pump. The common known modular design with many interchangeable parts makes it possible to repair all drainage and sludge pumps just with a few repair kits.

## OPTIONAL EXTRAS

## Complete equipment supply for easy installation and convenient handling

ABS offers a variety of discharge connections/quick couplings in different size and style to suit your needs/ requirements. Choose from ABS flexible durable discharge hoses in sizes up to 10".

## Easy installation with starter box and safe operation with level control

When a start and stop level is required, a starter box for level control can prolong the life of the pump. ABS provides standard DOL and star-delta starter boxes with a built in float switch for J/JC/JS/JT series. For the smaller J/JS pumps the level control function can be integrated in the pump.

## SoftDrive for cost effective operation

ABS offers a built in SoftDrive concept on the J54 to J205 pumps. It reduces starting current dramatically and provides a smooth operation for both the power net and pump equipment. The pump can be started with a smaller sized generator compared to a standard direct on line started pump.

## Plug and pump with ABS carry case kit

ABS pump model J12 and J15 are available as a complete carry case kit including pump, discharge connection, hose, couplings, lifting rope and bottom suction adapter. It is easily carried to site in a case including all parts needed to get the pump up running.

## Quick and easy installation with ABS flotation ring

ABS flotation rings offers a solution for pumps up to 55 kg. The flotation ring is easy to install and can be used to any of ABS dewatering pumps J12 to J54. Other pumps may be used after checking the lifting capacity.

## Let the pump float and avoid unnecessary wear with ABS flotation system

ABS flotation system offers a modular system and cover pumps from 70 to 600 kg. The modular flotation system is easy to build and use to any of ABS dewatering pumps J/JC 84 to J 604 and JS 54-84. Other pump types such as JT may be used after checking the lifting capacity.

## AIR OPERATED SUBMERSIBLE PUMPS

### Submersible Sump Pump 2" & 2½" Discharge

Rhino Submersible pumps have a small cross section and can be lowered into areas having small access hatches. Especially preferred where electric spark may risk ignition or explosion.

#### APPLICATIONS

- Construction
- De-watering
- Engineering industry
- Transfer of fluids, usage in sumps for periodic dewatering
- Marine- emptying ballast tanks, after washing procedure
- Draining cargo holds during and after washing procedure
- Pumping of sea water from bilges, holds, etc.

#### FEATURES

- Will pump down to 22mm. Will handle up to 3mm solids Governor controlled motor.
- Compact design enables uses in restricted areas. Air inlet operated by Gate Valve Lever.

# DEWATERING PUMPS

PAGE  
230

### Revolutionising dewatering pump performance

Pioneer Pump revolutionised the mining and quarrying pump industry when they launched the Pioneer Prime, high efficiency self priming pumps. Whether our pumps are assessed on flow rates, pressures or efficiencies, Pioneer pumps offer their users world class performance including flows over 4000m<sup>3</sup>/hr, heads of 16 bar all from pumps with two year warranties.

### Fully packaged sets including sound attenuation, bunded tanks and Tier III engines

With over 100 models of pumps and over forty packaged pumpsets to choose from including those that are fully bunded and sound attenuated, Pioneer offer the largest range of electric motor or engine driven pumps including equipment for use in ATEX environments or noise sensitive areas.

### Ductile iron castings, stainless steel shafts and run-dry seals all lead to high reliability

Features such as fully machined impellers, ductile iron castings and of course our run-dry mechanical seals give all our users a sense of security whilst at the same time knowing there is no other pump that can move so much water with such little energy consumption.

### Specifically designed not to be a compromise

With such a large product range to choose from, Pioneer Pump offer the right pump for the job which means it's not a compromise.

### It's not just the pump, it's the people

Having the right pump is not always enough. Having spares and backup including fully trained people capable of engineering solutions, has made Pioneer what it is today in a very short time, a world leader in mining and quarry pumps.

### Engineers first and foremost

Our sales engineers are fully capable of engineering solutions including full site surveys, system calculations and designing specific solutions for applications including pipework and fittings. From this they work with the in-house designers to develop solutions either from our standard product range or something special to solve those harder applications.

### Typical features of Pioneer pumps

- Heavy duty construction, including high quality materials of construction
- Oversized shaft and seal for high reliability in arduous conditions
- Silicon versus silicon mechanical seals with Viton elastomers
- Patented positive sealing priming equipment in full stainless steel
- Low NPSHr impeller designs for exceptional suction lifts
- Back pullout design allowing for ease of maintenance
- 50cfm vacuum pump on all sizes of Pioneer Prime for the fastest priming
- GGG40 Ductile Iron castings for extra long life on key parts such as impellers
- Optional materials includes CD4MCU abrasion resistant stainless steels
- 17-4PH stainless steel shafts for corrosion and abrasion resistance
- Auto-start and stop functionality on control panels
- GSM pump and engine monitoring from anywhere in the world
- Trailer or skids

### Typical applications of Pioneer pumps

- Sump pumping
- Extreme pressure dewatering of quarries and open cast mines
- Light slurry pumping
- Polymer pumping
- Flood management in environmentally sensitive areas
- Well pointing pumps
- Dust suppression pumping
- Rubble wash plants
- Sand and gravel sorting plants
- Concrete plants
- Dewatering
- Processing
- Temporary pumping

## Engineering Leadership

Pioneer Pump's innovation begins with our engineering team. Using the latest computer technology, we design our pumps to deliver outstanding hydraulic performance for both solids handling and clear liquid applications. Our large impeller eye areas provide higher suction lifts, lower NPSHr and more stable operation. No other company designs and builds centrifugal pumps capable of our extreme flows and pressures.

## Rugged Construction

From the Arctic to the equator, from oil exploration to corrosive waste, Pioneer pumps are built to survive — and thrive in the most demanding applications. Robust ductile iron (or special metal) construction combined with oversized bearings and shafts provide unparalleled reliability. In industries and climates where the cost of downtime is highest, confident customers count on Pioneer Pump.

## Green by Design

With stricter environmental regulations, pumps have to be safer, cleaner and more efficient than ever. All of our pumps utilize the latest engineering techniques to provide high-volume efficiency and low energy consumption. Unlike our competitors, our patented PosiValve™ priming valve prevents spillage and carryover of the product. Compare our pumps to others on gallons pumped and energy consumed. You'll see why Pioneer is the greenest choice.

## Smart Designs

Our modular design allows us to fulfill your needs with the right pump for multiple applications while minimizing spare parts. Mounting multiple pump ends on standardized heavy-duty bearing housings enables us to build and ship quickly. Our trailer packages are designed so you can convert to stationary skid with just a few turns of the wrench. Our versatility gives us the confidence to say "yes" to your needs while saving you money.

## High-flow and High-pressure Dewatering

**Get extreme performance** Pioneer Prime offers flows up to 18,000 GPM (4,000m³/hr) and heads to 700+ feet (210m) with vacuum-assisted dry priming and run-dry capability, providing the best performance of any company in the selfpriming pump market.

**Work more efficiently** Exceptional hydraulic designs combined with outstanding quality assures less service and downtime, leading to increased production and profits.

**Be environmentally friendly** Our patented PosiValve™ and UltraPrime priming system prevents leakage and carryover while offering unparalleled reliability. Fully contained packages, including 110% containment with noise levels as low as 60 dBA, meet noise and containment regulations.

**Get back to work sooner** Size for size, Pioneer pumps are designed to move more water than any other manufacturer. Whether it is mine dewatering or quarry flooding, Pioneer gets you drier, faster.

## Plant and Process

### Get more performance with less energy

Pioneer pumps are highly efficient so they're better for your budget and the environment.

**High flow without worries** ST Standard centrifugal and self-priming pumps deliver high flow and pressure for the most demanding mining applications.

### Process pump applications include:

- Wheel washing
- Light slurry and polymer pumping
- Dust suppression
- Sand and gravel washing
- Concrete plant water feed pumps

## Pioneer Prime

For superior flow and suction lift capabilities, consider the Pioneer Prime series. Our pumps deliver extreme flows with high head capability, combined with our UltraPrime™ priming system, which is capable of rapid (50 CFM) unattended priming and run-dry operation. Our environmentally friendly, patented PosiValve priming valve prevents leakage and product carryover. Units are available for solids handling or clear liquid service. In addition, enclosed silent units are available with low dBA ratings designed around your specific application. Pumps are also available in a variety of different metallurgies.

### DESCRIPTION

End suction centrifugal pumps with vacuum-assist, dry-priming capabilities

### PERFORMANCE

Size: 40–760 mm

Flow: 4–10,000 m<sup>3</sup>/hr 2–3000 l/s

Head: 210 meters

### AVAILABLE CONFIGURATIONS

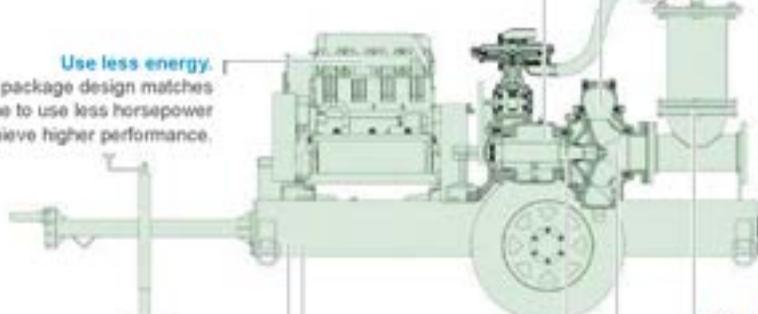

- Frame-mounted
- Sound-attenuated skid or trailer packages
- Base-mounted electric-driven
- Engine-driven skid or trailer packages
- Engine-driven
- SAE-mounted

**Minimize maintenance costs.**  
Keep the pump running optimally with replaceable wear rings, oversized shafts and bearings.

**Enjoy quiet operation.**  
Sound-attenuated packages available.

**Use less energy.**  
Optimized package design matches pump with engine to use less horsepower and achieve higher performance.

**Get a rental-ready package.**  
Robust skid with large integral fuel tank allows for extended run time.

**Increase flexibility.**  
Modular pumpset designs make it fast and easy to convert from trailer to skid.

**Prime from dry for unattended operation.**  
Standard indefinite run-dry tungsten vs. silicon carbide mechanical seal with large oil reservoir.

**Lower operating costs.**  
More flow with less horsepower means reduced operating costs with our industry-leading, high-performance impeller design.

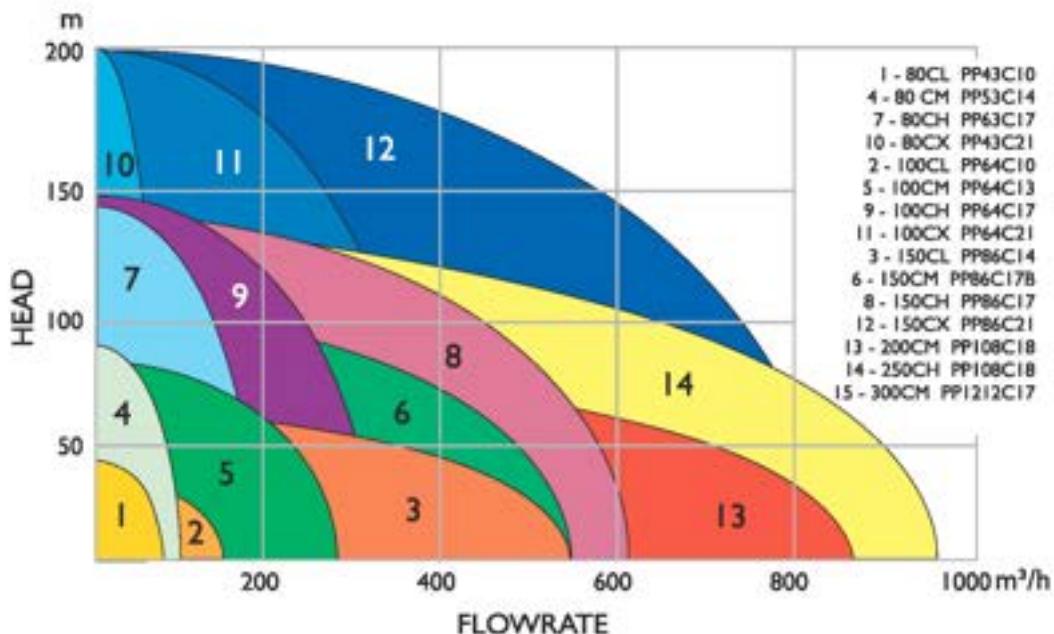

**Eliminate environmental concerns due to product spillage.**  
Our PosiValve stainless steel priming valve is specifically designed to eliminate product carryover.

**Get rapid priming and repriming.**  
Our UltraPrime priming system provides 50 CFM liquid-tolerant, diaphragm vacuum pump for faster priming and higher air-handling capability.

**Achieve better performance.**  
Large impeller eye areas with lower NPSHr characteristics allow for higher suction lift capability.

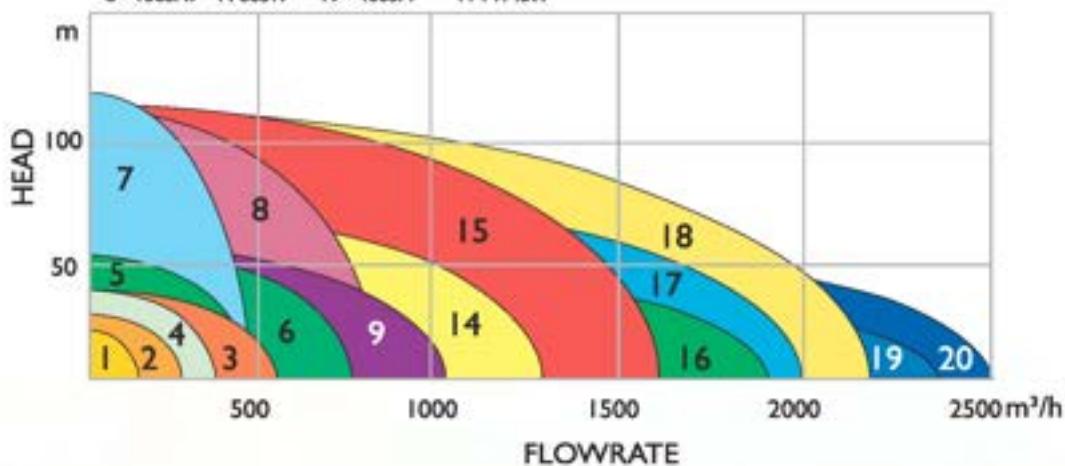

## Performance Curves

High pressure self priming pumps - Engine driven pumps operating at 1800-2000rpm

Solids handling self priming pumps - Engine driven pumps operating at 1800-2000rpm

1 - 80SL	PP43075	9 - 200SL	PP88S12	20 - 450SM	PP1818S22
2 - 100SL	PP44S8	14 - 200SM	PP108S14	21 - 450SH	PP1818S22
5 - 100SM	PP44S10	15 - 250SH	PP108S17	Note: All pumps have a minimum 76mm solids handling capability	
7 - 100SH	PP64S17	16 - 300SL	PP1212S13	250mm-400mm pumps have a minimum 90mm solids handling capability	
3 - 150SL	PP66S10	17 - 300SM	PP1212S14	450mm pumps have a 150mm solids handling capability	
6 - 150SM	PP66S12	18 - 300SH	PP1212S17		
8 - 150SH	PP86S17	19 - 400SM	PP1414S17		

## Pioneer 80SL PP43075

General purpose pumpset ideal for small drainage, trenching, dewatering with ease of access and manoeuvrability.

### SPECIFICATIONS

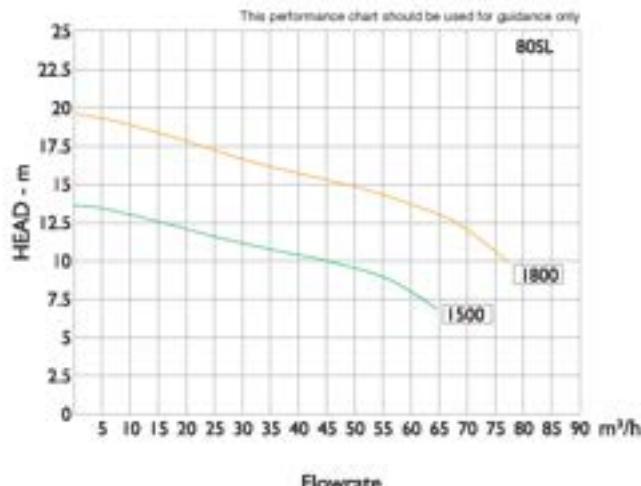

Pump Size:	80mm
Max Flow m <sup>3</sup> /hr:	100
Max Head m:	22
Solids Size mm:	25
Max Efficiency %:	62
Performance at BEP:	52m <sup>3</sup> /hr@13m
Engine Type:	Hatz-1D81
Nominal Speed rpm:	1800
Rated Power kw:	5.5
Dry Weight kg:	740

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 100SL PP44S8

General purpose pumpset ideal for sewage bypass, trenching, dewatering with ease of access and manoeuvrability.

### SPECIFICATIONS

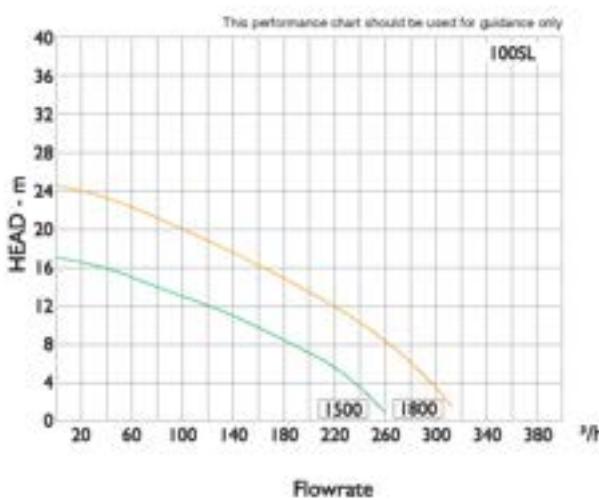

Pump Size:	100 x 100mm
Max Flow m <sup>3</sup> /hr:	300
Max Head m:	25
Solids Size mm:	76
Max Efficiency %:	70
Performance at BEP:	162m <sup>3</sup> /hr@15m
Engine Type:	Perkins 403D/DEUTZ 914/CAT 1.5
Nominal Speed rpm:	1800
Rated Power kw:	5.5-19
Dry Weight kg:	1390

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 100SM PP44S10

General purpose pumpset ideal for sewage bypass, trenching, dewatering with ease of access and manoeuvrability.

### SPECIFICATIONS

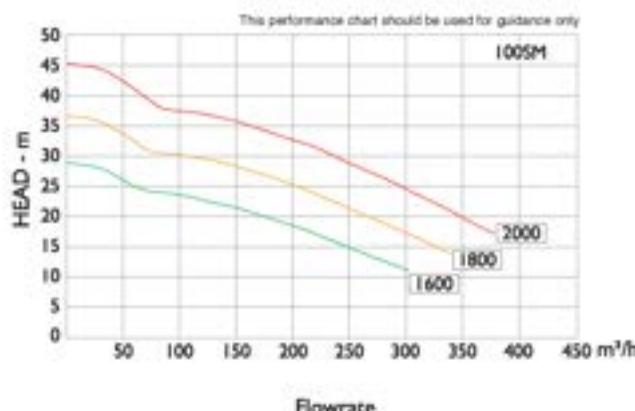

Pump Size:	100 x 100mm
Max Flow m³/hr:	365
Max Head m:	45
Solids Size mm:	76
Max Efficiency %:	69
Performance at BEP:	240m³/hr@25m
Engine Type:	Perkins 404D/DEUTZ 914/JD 3029
Nominal Speed rpm:	1800
Rated Power kw:	12.30
Dry Weight kg:	1520

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 100SH PP64S17

High pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

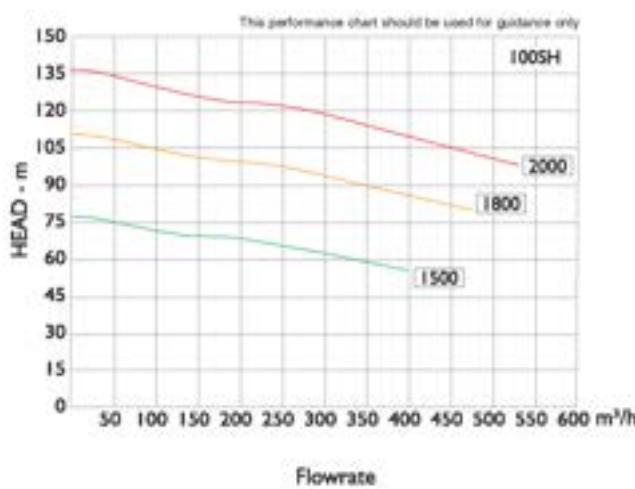

Pump Size:	150 x 100mm
Max Flow m³/hr:	340
Max Head m:	135
Solids Size mm:	76
Max Efficiency %:	72
Performance at BEP:	350m³/hr@90m
Engine Type:	CAT C9/JD 6091/DEUTZ 914
Nominal Speed rpm:	1800
Rated Power kw:	225
Dry Weight kg:	3500-5000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 125SM PP64S12

Medium pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

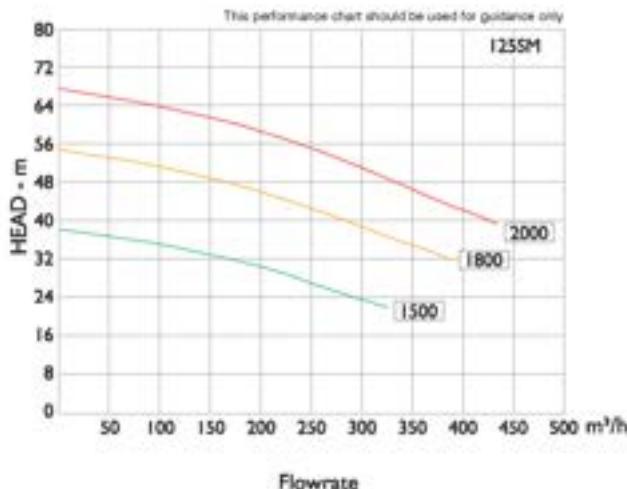

Pump Size:	150 x 100mm
Max Flow m <sup>3</sup> /hr:	400
Max Head m:	66
Solids Size mm:	76
Max Efficiency %:	69
Performance at BEP:	285m <sup>3</sup> /hr@40m
Engine Type:	JCB 444/JD 4045/CAT 4.4/DEUTZ 914
Nominal Speed rpm:	2000
Rated Power kw:	200
Dry Weight kg:	2050-3500

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 150SL PP66S10

General purpose pumpset ideal for sewage bypass, trenching, dewatering with ease of access and manoeuvrability.

### SPECIFICATIONS

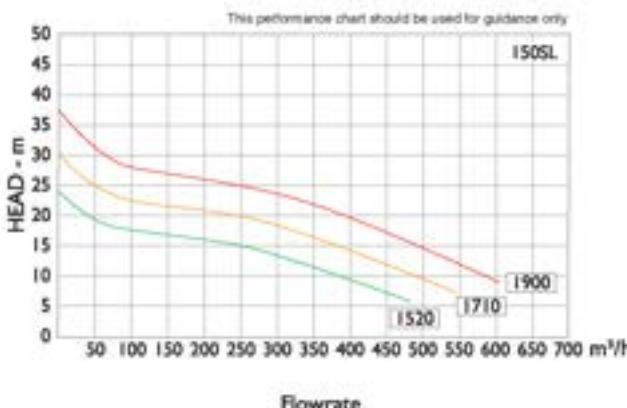

Pump Size:	150 x 150mm
Max Flow m <sup>3</sup> /hr:	500
Max Head m:	34
Solids Size mm:	76
Max Efficiency %:	71
Performance at BEP:	350m <sup>3</sup> /hr@19m
Engine Type:	Perkins 404D/JD 3029/DEUTZ 914
Nominal Speed rpm:	1800
Rated Power kw:	7.5-30
Dry Weight kg:	1520

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 150SM PP66S12

Medium pressure pumpset ideal for sewage bypass, flood control, dewatering with small footprint or easy handling requirement.

### SPECIFICATIONS

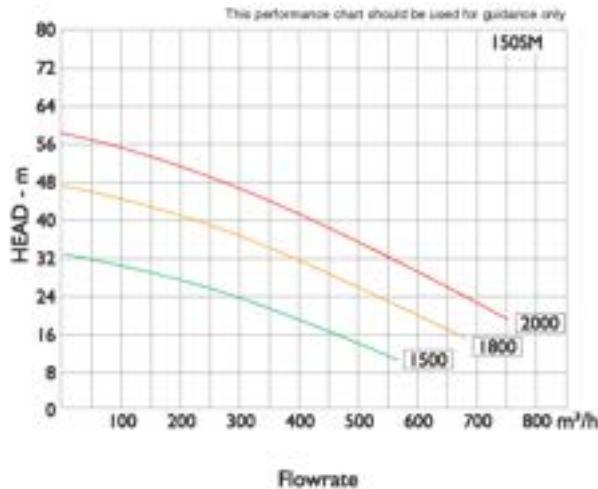

Pump Size:	150 x 150mm
Max Flow m <sup>3</sup> /hr:	720
Max Head m:	58
Solids Size mm:	76
Max Efficiency %:	68
Performance at BEP:	490m <sup>3</sup> /hr@25m
Engine Type:	JCB 444/JD 4045/CAT 4.4/DEUTZ 914
Nominal Speed rpm:	1800
Rated Power kw:	25-80
Dry Weight kg:	2050-3500

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 150SH PP86S17

High pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

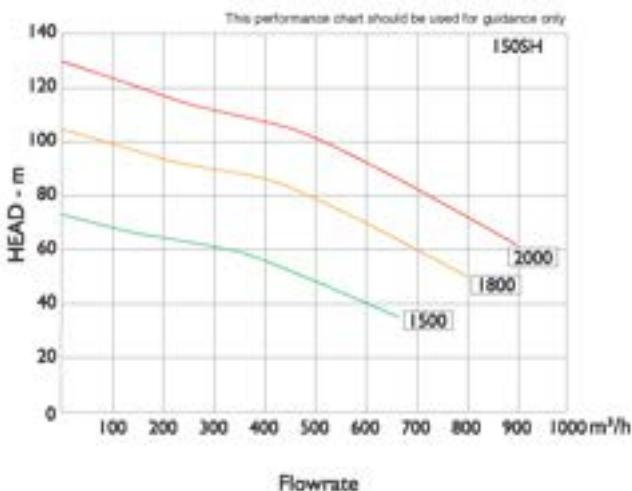

Pump Size:	150 x 100mm
Max Flow m <sup>3</sup> /hr:	820
Max Head m:	132
Solids Size mm:	76
Max Efficiency %:	73
Performance at BEP:	570m <sup>3</sup> /hr@72m
Engine Type:	CAT C9-C15/JD 6091-6135
Nominal Speed rpm:	2000
Rated Power kw:	200
Dry Weight kg:	3000-5000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

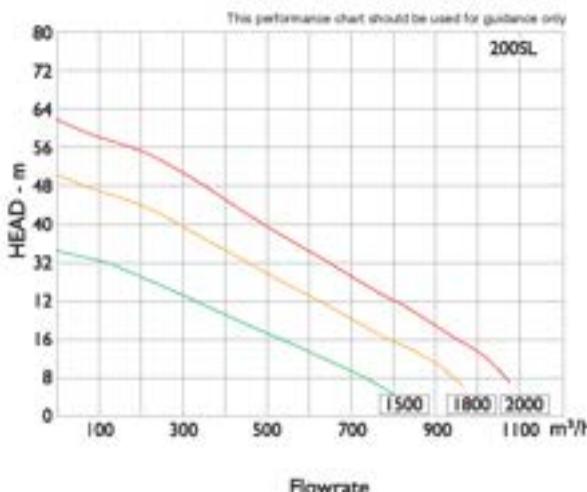

## Pioneer 150SL PP66S10

High flow pumpset ideal for sewage bypass, flood control, dewatering with ease of handling and towable behind 4x4.

### SPECIFICATIONS

Pump Size:	200 x 200mm
Max Flow m³/hr:	1050
Max Head m:	62
Solids Size mm:	76
Max Efficiency %:	68
Performance at BEP:	630m³/hr@32m
Engine Type:	JCB 444/JD 4045/CAT 4.4/DEUTZ 914
Nominal Speed rpm:	1800
Rated Power kw:	30.75
Dry Weight kg:	2500-3500

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

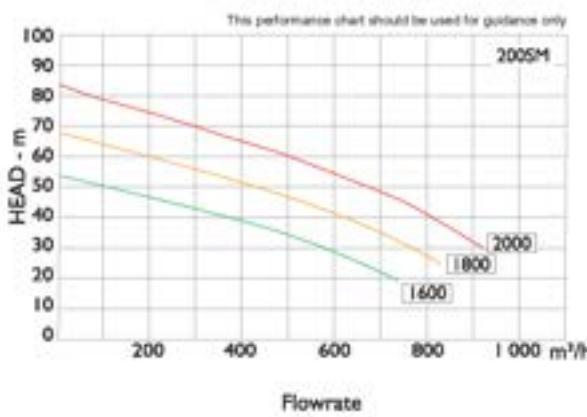

## Pioneer 200SM PP108S17

Medium pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

Pump Size:	200 x 200mm
Max Flow m³/hr:	1300
Max Head m:	92
Solids Size mm:	100
Max Efficiency %:	70
Performance at BEP:	600m³/hr@40m
Engine Type:	Perkins 1106D/JD 6068/CAT C7
Nominal Speed rpm:	1800
Rated Power kw:	160
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

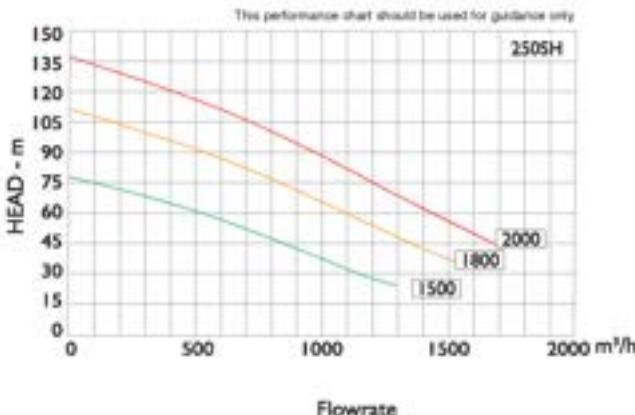

## Pioneer 250SH PP108S17

High pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

Pump Size:	250 x 200mm
Max Flow m <sup>3</sup> /hr:	1600
Max Head m:	130
Solids Size mm:	90-100
Max Efficiency %:	76
Performance at BEP:	1050m <sup>3</sup> /hr@80m
Engine Type:	CAT C9/JD 6091/VOLVO 952
Nominal Speed rpm:	1800
Rated Power kw:	225
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

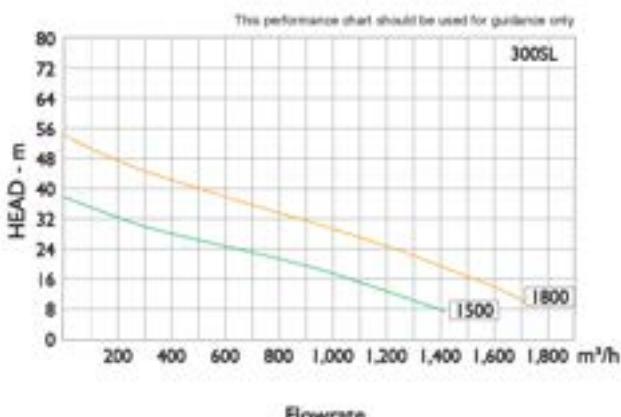

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 300SL PP1212S17

High flow pumpset ideal for sewage bypass, flood control, dewatering in a compact design.

### SPECIFICATIONS

Pump Size:	300 x 300mm
Max Flow m <sup>3</sup> /hr:	1300
Max Head m:	35
Solids Size mm:	100
Max Efficiency %:	75
Performance at BEP:	1380m <sup>3</sup> /hr@28m
Engine Type:	Perkins 1106D/JD 6068/CAT C7
Nominal Speed rpm:	1500
Rated Power kw:	55-90
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

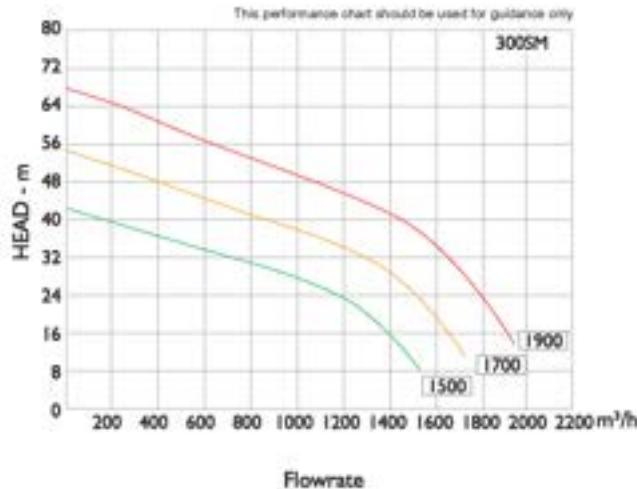

## Pioneer 300SM PP1212S14

High flow pumpset ideal for bypass, flood control, dewatering in a compact design.

### SPECIFICATIONS

Pump Size:	300 x 300mm
Max Flow m <sup>3</sup> /hr:	2200
Max Head m:	95
Solids Size mm:	60
Max Efficiency %:	80
Performance at BEP:	1380m <sup>3</sup> /hr@36m
Engine Type:	CAT C9/JD 6091/DEUTZ 914
Nominal Speed rpm:	1800
Rated Power kw:	150-275
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

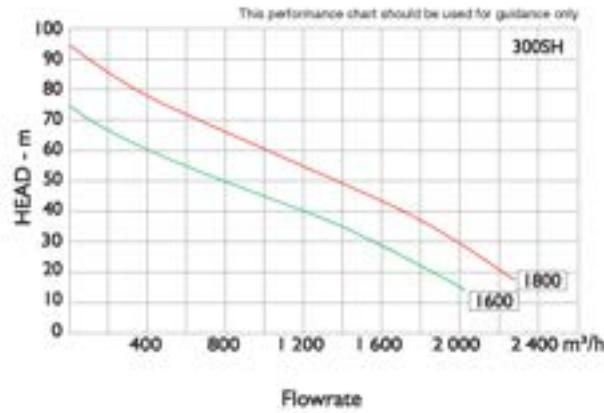

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 300SH PP1212S17

High pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

Pump Size:	300 x 300mm
Max Flow m <sup>3</sup> /hr:	2200
Max Head m:	95
Solids Size mm:	90-100
Max Efficiency %:	85
Performance at BEP:	1680m <sup>3</sup> /hr@40m
Engine Type:	CAT C9-15/JD 6091-6135
Nominal Speed rpm:	1800
Rated Power kw:	375
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 400SM PP1414S17

High flow pumpset ideal for sewage bypass, flood control, dewatering in a compact design.

### SPECIFICATIONS

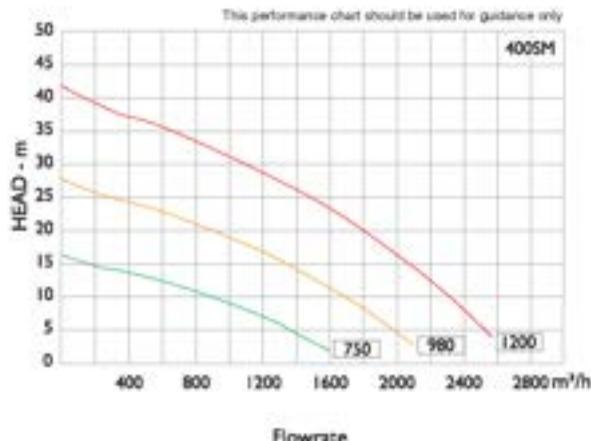

Pump Size:	400 x 400mm
Max Flow m <sup>3</sup> /hr:	2500
Max Head m:	45
Solids Size mm:	100
Max Efficiency %:	72
Performance at BEP:	1680m <sup>3</sup> /hr@22m
Engine Type:	CAT C9/JD 6091
Nominal Speed rpm:	1200
Rated Power kw:	100-250
Dry Weight kg:	5000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 450SM PP1818S22

High flow pumpset ideal for sewage bypass, flood control, dewatering in a heavy duty site skid design.

### SPECIFICATIONS

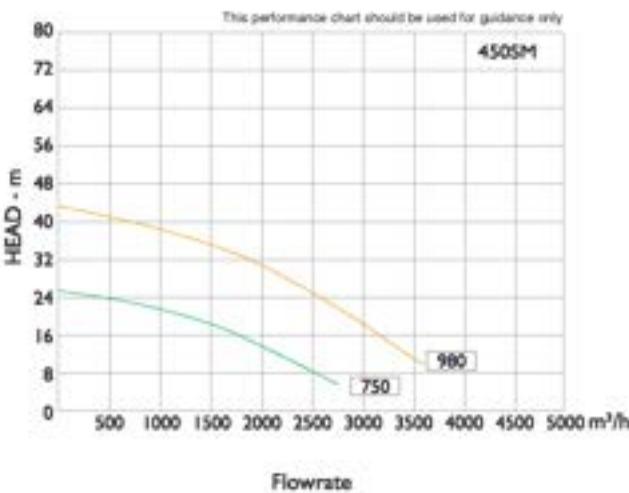

Pump Size:	450 x 450mm
Max Flow m <sup>3</sup> /hr:	3500
Max Head m:	44
Solids Size mm:	150
Max Efficiency %:	80
Performance at BEP:	2600m <sup>3</sup> /hr@21m
Engine Type:	CAT C9/JD 6091
Nominal Speed rpm:	1200
Rated Power kw:	225
Dry Weight kg:	6000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 450SH PP1818S22

High pressure solids handling pumpset ideal for bypass, flood control and dewatering with environmental design allowing for continuous pumping in noise sensitive environments.

### SPECIFICATIONS

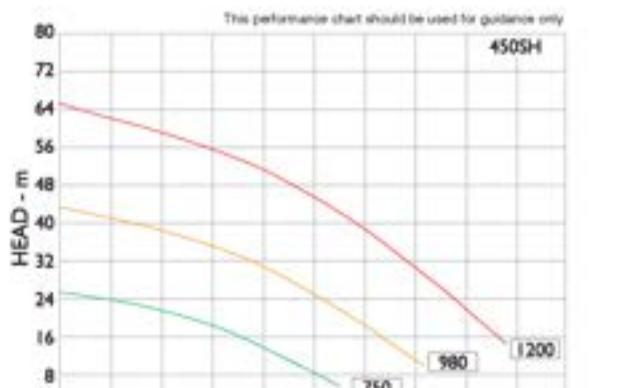

Pump Size:	450 x 450mm
Max Flow m <sup>3</sup> /hr:	4200
Max Head m:	75
Solids Size mm:	150
Max Efficiency %:	80
Performance at BEP:	3200m <sup>3</sup> /hr@42m
Engine Type:	CAT C18ACERT
Nominal Speed rpm:	1200
Rated Power kw:	450
Dry Weight kg:	5000-7000

### FEATURES

- Ductile Iron construction
- Solids Handling
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 80CL PP43C10

General purpose low pressure pumpset ideal for jetting, dewatering making it ideal for general construction work and quarry dewatering.

### SPECIFICATIONS

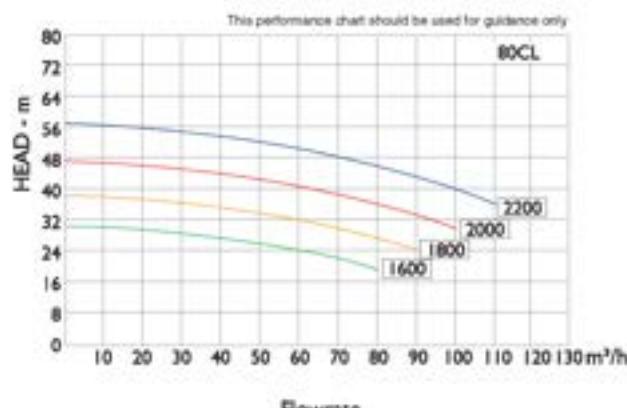

Pump Size:	100 x 80mm
Max Flow m <sup>3</sup> /hr:	120
Max Head m:	48
Solids Size mm:	10
Max Efficiency %:	68
Performance at BEP:	70m <sup>3</sup> /hr@38m
Engine Type:	Perkins 404D/JD 3029/DEUTZ 914
Nominal Speed rpm:	2000
Rated Power kw:	18
Dry Weight kg:	1500

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 80CM PP53C14

General purpose medium pressure pumpset ideal for jetting, dewatering making it ideal for general construction work and quarry dewatering.

### SPECIFICATIONS

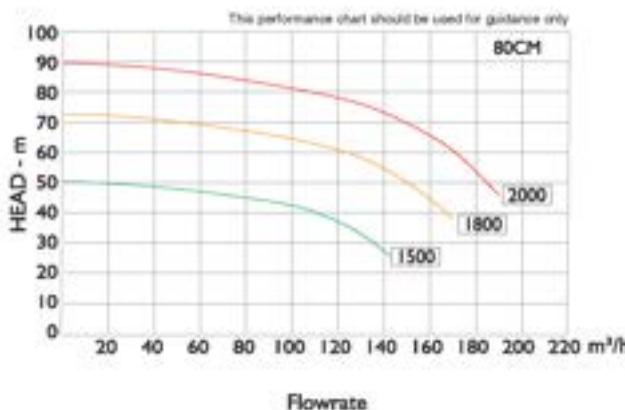

Pump Size:	150 x 80mm
Max Flow m³/hr:	160
Max Head m:	90
Solids Size mm:	12
Max Efficiency %:	63
Performance at BEP:	145m³/hr@65m
Engine Type:	JCB 444/JD 4045/CAT 4.4/DEUTZ 914
Nominal Speed rpm:	2000
Rated Power kw:	50-75
Dry Weight kg:	2050-3500

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 450SM PP1818S22

High pressure clear liquid pump ideal for high head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

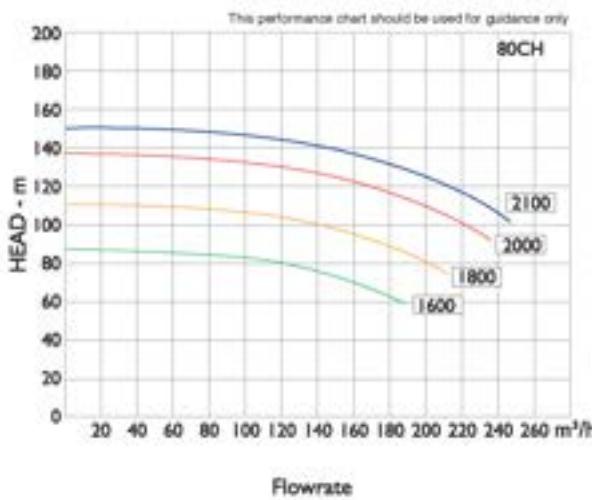

Pump Size:	150 x 80mm
Max Flow m³/hr:	240
Max Head m:	155
Solids Size mm:	20
Max Efficiency %:	62
Performance at BEP:	162m³/hr@122m
Engine Type:	Perkins 1106D/JD 6068/CAT C7
Nominal Speed rpm:	2200
Rated Power kw:	130
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 80CX PP43C21

Extreme pressure clear liquid pump ideal for high head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

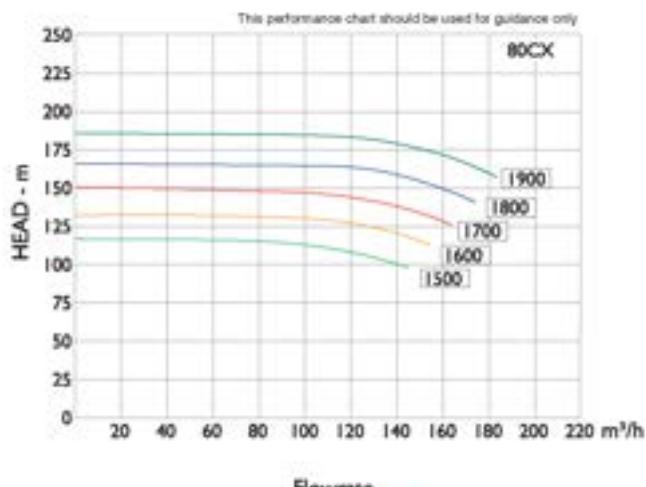

Pump Size:	100 x 80mm
Max Flow m <sup>3</sup> /hr:	125
Max Head m:	218
Solids Size mm:	18
Max Efficiency %:	58
Performance at BEP:	95m <sup>3</sup> /hr@155m
Engine Type:	Perkins 1106D/JD 6068/CAT C7
Nominal Speed rpm:	2200
Rated Power kw:	130
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 100CL PP64C10

Low pressure clear liquid pump ideal for general quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

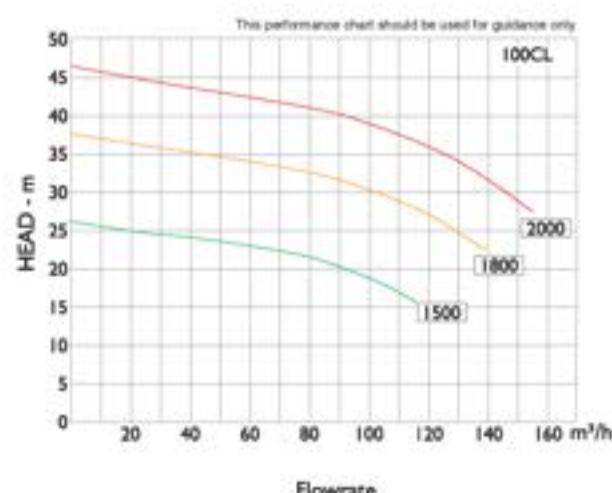

Pump Size:	150 x 100mm
Max Flow m <sup>3</sup> /hr:	160
Max Head m:	47
Solids Size mm:	20
Max Efficiency %:	78
Performance at BEP:	110m <sup>3</sup> /hr@38m
Engine Type:	Perkins 404D/JD 3029/DEUTZ 914
Nominal Speed rpm:	2000
Rated Power kw:	20-30
Dry Weight kg:	1520

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

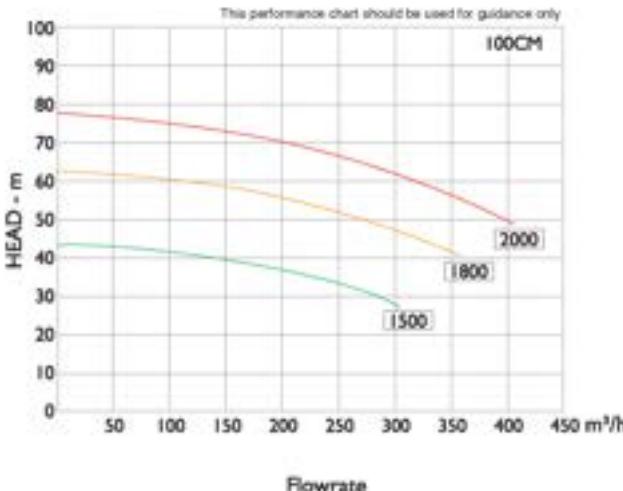

## Pioneer 100CM PP64C13

General purpose medium pressure pumpset ideal for jetting, dewatering making it ideal for general construction work and quarry dewatering.

### SPECIFICATIONS

Pump Size:	150 x 100mm
Max Flow m <sup>3</sup> /hr:	325
Max Head m:	77
Solids Size mm:	12
Max Efficiency %:	75
Performance at BEP:	225m <sup>3</sup> /hr@66m
Engine Type:	JCB 444/JD 4045/CAT 4.4/DEUTZ 914
Nominal Speed rpm:	2000
Rated Power kw:	80
Dry Weight kg:	2050-3500

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

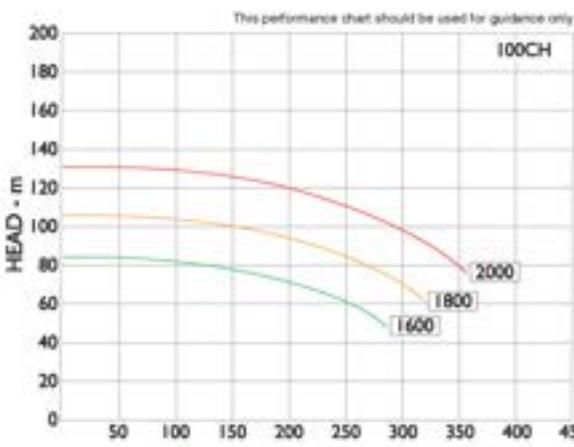

## Pioneer 100CH PP64C17

Extreme pressure clear liquid pump ideal for high head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

Pump Size:	150 x 100mm
Max Flow m <sup>3</sup> /hr:	320
Max Head m:	155
Solids Size mm:	20
Max Efficiency %:	67
Performance at BEP:	235m <sup>3</sup> /hr@115m
Engine Type:	Perkins 1106D/JD 6068/CAT C7
Nominal Speed rpm:	2000
Rated Power kw:	90-175
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 100CX PP64C21

Extreme pressure clear liquid pump ideal for high head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

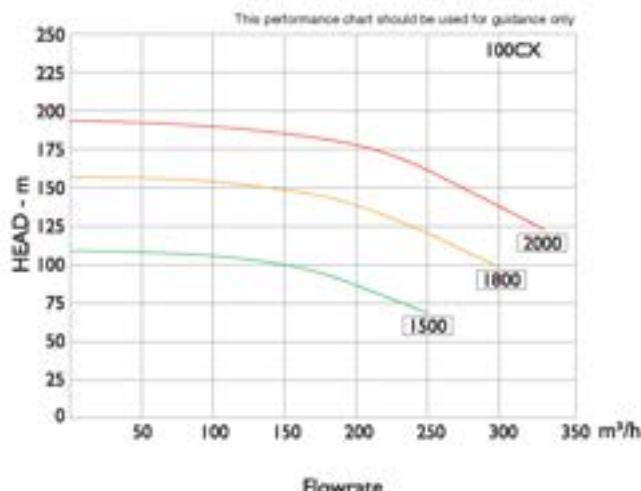

Pump Size:	150 x 100mm
Max Flow m³/hr:	300
Max Head m:	195
Solids Size mm:	20
Max Efficiency %:	64
Performance at BEP:	160m³/hr@180m
Engine Type:	CAT C9/JD 6091/DEUTZ 914
Nominal Speed rpm:	2000
Rated Power kw:	125-225
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 150CL PP86C14

General purpose low pressure pumpset ideal for jetting, dewatering making it ideal for general construction work and quarry dewatering.

### SPECIFICATIONS

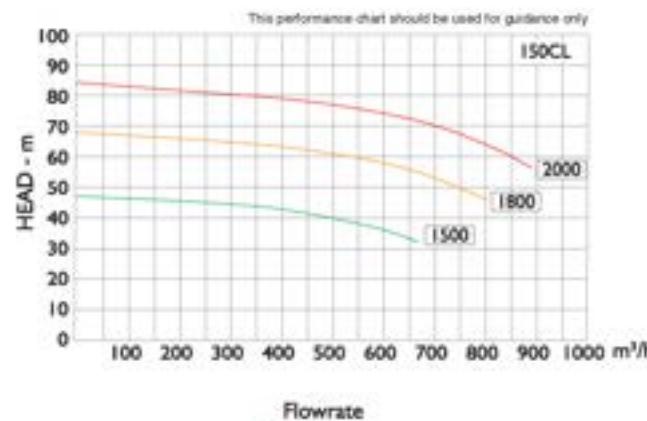

Pump Size:	200 x 150mm
Max Flow m³/hr:	900
Max Head m:	82
Solids Size mm:	15
Max Efficiency %:	74
Performance at BEP:	540m³/hr@55m
Engine Type:	Perkins 1106D/JD 6068/CAT C7
Nominal Speed rpm:	1800
Rated Power kw:	50-160
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 150CM PP86C17B

Medium pressure clear liquid pump ideal for medium head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

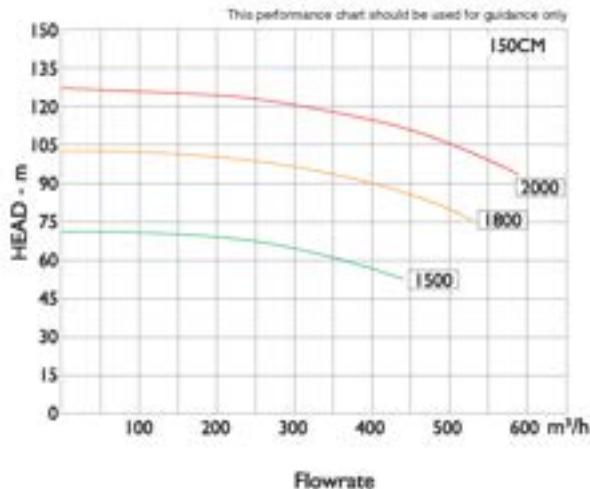

Pump Size:	200 x 150mm
Max Flow m <sup>3</sup> /hr:	450
Max Head m:	125
Solids Size mm:	30
Max Efficiency %:	73
Performance at BEP:	400m <sup>3</sup> /hr@90m
Engine Type:	JD 6091/CAT C9
Nominal Speed rpm:	1900
Rated Power kw:	225
Dry Weight kg:	3500-4000

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

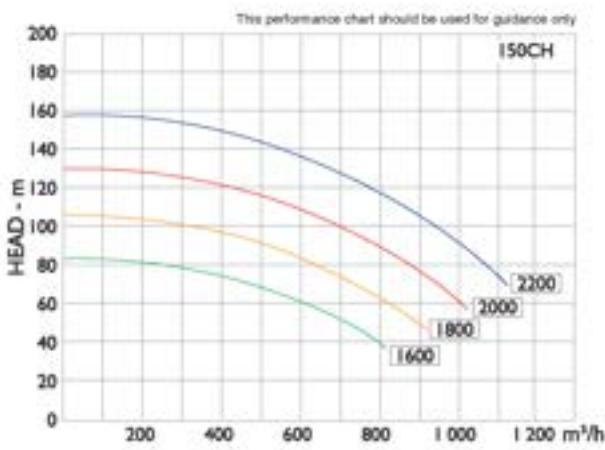

## Pioneer 150CH PP86C17

High pressure clear liquid pump ideal for high head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

Pump Size:	200 x 150mm
Max Flow m³/hr:	850
Max Head m:	135
Solids Size mm:	30
Max Efficiency %:	76
Performance at BEP:	600m³/hr@118m
Engine Type:	JD 6135/CAT C15
Nominal Speed rpm:	1900
Rated Power kw:	150-375
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 150CX PP86C21

Extreme pressure clear liquid pump ideal for high head quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

Pump Size:	200 x 150mm
Max Flow m³/hr:	900
Max Head m:	202
Solids Size mm:	35
Max Efficiency %:	70
Performance at BEP:	645m³/hr@152m
Engine Type:	CAT C18-27/QSK 23
Nominal Speed rpm:	2000
Rated Power kw:	200-550
Dry Weight kg:	4000-8000

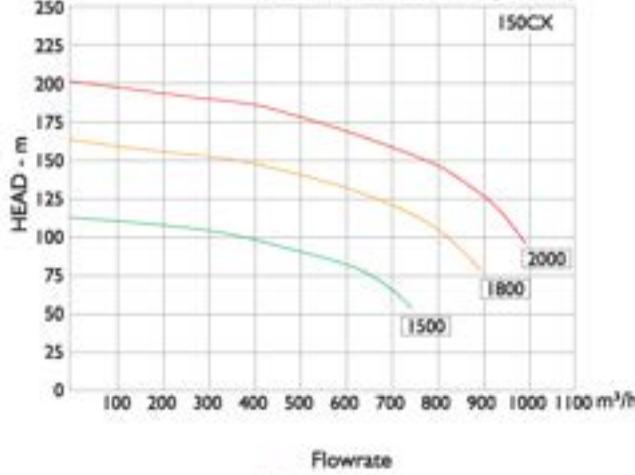

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

This performance chart should be used for guidance only

## Pioneer 150CL PP86C14

General purpose low pressure pumpset ideal for jetting, dewatering making it ideal for general construction work and quarry dewatering.

### SPECIFICATIONS

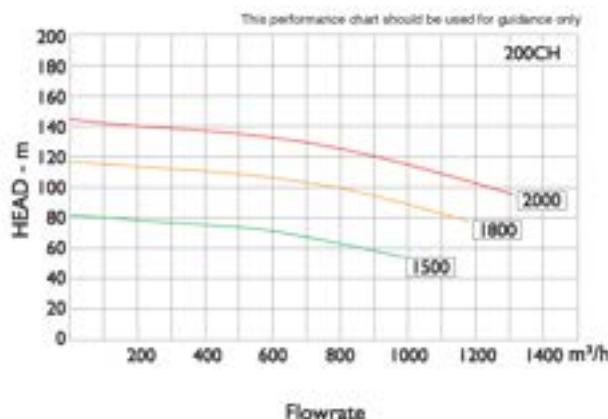

Pump Size:	250 x 200mm
Max Flow m <sup>3</sup> /hr:	1100
Max Head m:	115
Solids Size mm:	30
Max Efficiency %:	78
Performance at BEP:	900m <sup>3</sup> /hr@93m
Engine Type:	CAT C18ACERT
Nominal Speed rpm:	1800
Rated Power kw:	270-575
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 250CM PP1010C14

Medium pressure clear liquid pump ideal for quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

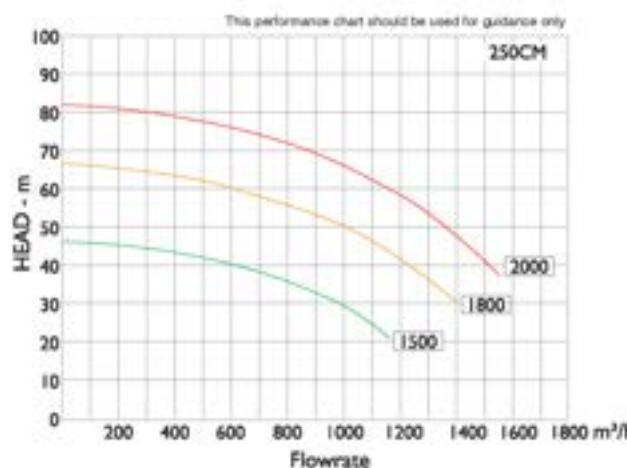

Pump Size:	250 x 250mm
Max Flow m <sup>3</sup> /hr:	1200
Max Head m:	66
Solids Size mm:	40
Max Efficiency %:	83
Performance at BEP:	1000m <sup>3</sup> /hr@52m
Engine Type:	CAT C9/JD 6091
Nominal Speed rpm:	1800
Rated Power kw:	190-225
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Low NPSH<sub>r</sub> designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

## Pioneer 300CM PP1212C17

Medium pressure clear liquid pump ideal for high flow quarry and mining applications, fire fighting and dewatering.

### SPECIFICATIONS

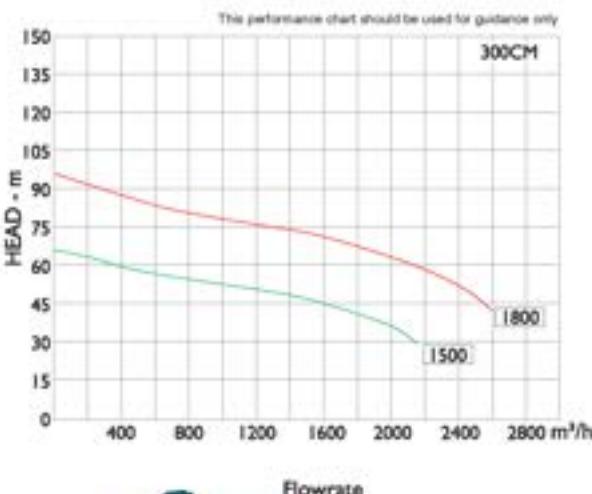

Pump Size:	300 x 300mm
Max Flow m <sup>3</sup> /hr:	2400
Max Head m:	90
Solids Size mm:	30
Max Efficiency %:	85
Performance at BEP:	1750m <sup>3</sup> /hr@70m
Engine Type:	CAT C15/JD 6035
Nominal Speed rpm:	1800
Rated Power kw:	200-400
Dry Weight kg:	3500-5500

### FEATURES

- Ductile Iron construction
- Low NPSHr designs
- High efficiency impeller
- Run-dry seal
- 50 cfm vacuum pump
- Posi-seal priming valve

### OPTIONS

- Open trailer
- Heavy duty skid
- Sound attenuated
- Auto-start panel
- GSM telemetry
- Remote fuel connections

# VERTICAL TURBINE PUMPS

PAGE  
252

## Powered by Engineering

### Research and Development

Sabre R & D department uses a special design software already prepared by Sabre Engineers to create a new impeller and diffuser. Design results will be rechecked by CFD programs before starting the preparation of patterns. This ability gives a great flexibility to create a new pump in a short period with high efficiency.

### Different Material Option

Sabre gives a great material selection option to the customers for different applications such as cast iron, cast steel, non-alloyed and low alloy steel grades, stainless CrNi Steel grades, duplex and superduplex steel grades, Bronze, Ni-Al Bronze and others.

### Test capabilities:

- Performance test
- Noise level testing
- Vibration analysis
- Liquid dye penetrant testing
- Magnetic particle testing
- Radiographic examination of welding
- Ultrasonic examination of raw materials & weldings
- Metallurgical analysis

### Welding Process

Fabrication is made by qualified and certified welders who utilize M.I.G, T.I.G, and innershield welding process.

### Machinery

CNC boring machines up to 2500mm diameter, Vertical & Horizontal lathes and individual production equipment supports an efficient and flexible manufacturing process.

### Coating

Any coating available for potable and nonpotable services.

### High Efficiency

20% of produced energy in the world is consumed by pumps. Saving 30% of this energy is possible with a good system design and well designed pumps. With this awareness our purpose is to produce pumps with high efficiencies up to %93. The most important criteria for Sabre Team is life cycle cost.

### Quality Assurance

Quality Control is a continuous process in Sabre. It starts from the quotation phase, ordering phase, manufacturing process, installation & operation phase, warranty period & after sales operations.

### Pattern Shop

Sabre has complete in house pattern shop powered by CAD-CAM programs. It gives a quick action ability for the new designs and improvements.

### Foundries

Thanks to the location of the factory, Sabre has a wide range of alternative foundries for different materials.

### Test

Sabre has great ability for testing up to 30.000 m<sup>3</sup>/h flow capacity with magnetic flowmeters ranges from ø40mm up to ø1200mm. Test bench has voltage variety from 400V - 690V - 1.000V - 3.300V - 6.300V and the power up to 3600 kW. Test bench is capable of testing the pump in various speeds by frequency convertors and fully computerized.

### Assembly

All components are assembled precisely according to the customer specifications for the best efficiency, long service life and the best appearance.

## Features

### Suction Bell

Each suction bell includes entrance guide vanes to prevent prerotation while guiding the liquid flow parallel to the drive shaft for maximum efficiency. Suction bells can be fitted with strainers to restrict entry of foreign objects during operation.

### Impeller

Impellers, enclosed or semi-open, are precisely trimmed and balanced to reduce vibration and wear.

Impellers are secured firmly to the shaft by means of a key and a split thrust ring or by a taper coiled for small pump sizes.

### Bowls

Bowl guide vanes are precisely designed for the maximum conversion of kinetic energy to the pressure energy to achieve peak efficiency. The bowls are flanged and the material selection is made according to the pumping fluid. Bowls can be enamelled, plastic or ceramic coated to reduce the friction losses and to maintain a protective layer. Single or dual bronze and rubber bearings provide alignment and dampen vibration. Bowls are supplied with replaceable wear rings.

### Shafts

The pump shaft is divided into three sections: head shaft, line shaft and bowl shaft. Shafts are turned, ground and polished and the material selection varies depending on the application. The shaft is tailor made to the service needs and sized individually for each installation; calculated for maximum torque.

### Discharge Head

The discharge head consists of a surface or underground sectional elbow. Heads are available in high strength cast iron, fabricated steel or other materials that are compatible to the pumped fluid.

Heads may be coated internally to further resist product corrosion. In addition efficiency improvement NSF coatings for potable water are available

### Column Assembly

Column pipes can be threaded or flanged according the size and the customer request. Pipes are machined between the centers to ensure perfect alignment. The lubrication of the column assembly can be in three ways:

**Oil Lubrication:** Oil is supplied to bronze lineshaft bearings by an oiler, secured on the motor base. Oiler can be hand operated or solenoid for automatic lubrication. Oil lubricated columns contain a lineshaft enclosing tube. The suction bell bearing is packed with water resistant grease, ensuring a long period operation.

**Grease Lubrication:** Grease is supplied to bronze lineshaft bearings by a grease pump, secured to the motor base.

**Water Lubrication:** The rubber lineshaft bearings are lubricated by the pumped water. The suction bell bearing is grease lubricated.

### ShaftSeal

Options are provided for reliable sealing and simple maintenance including gland packing and various mechanical seal arrangements.

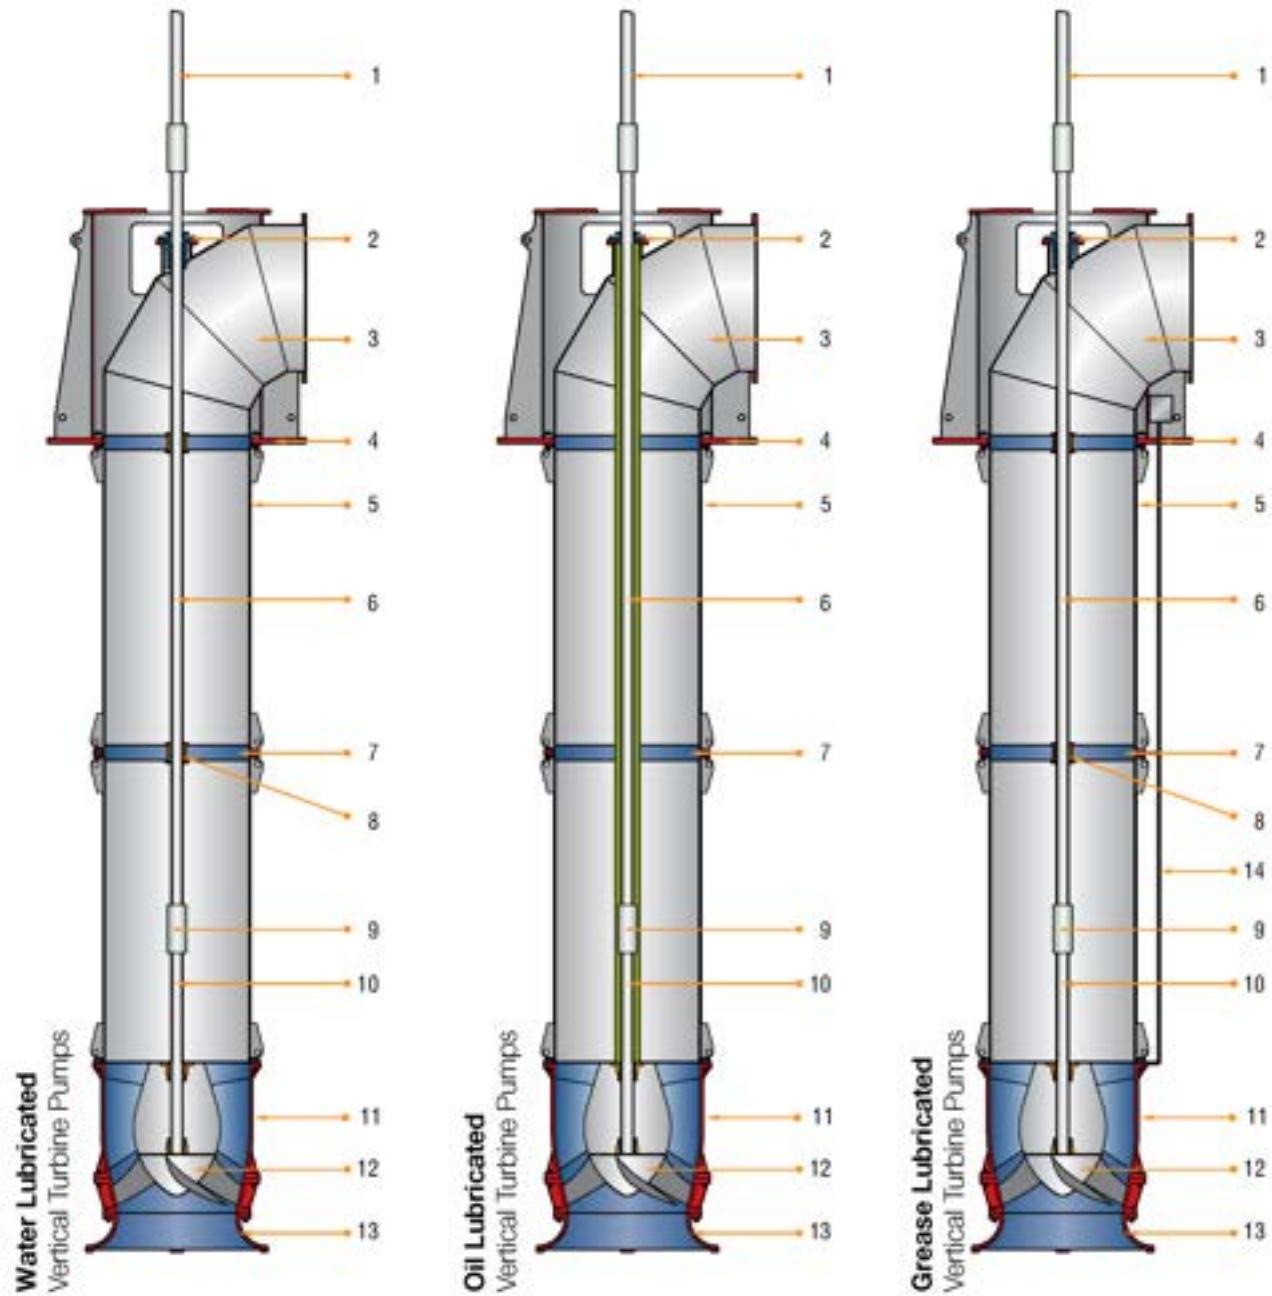

### Drivers

Vertical electric motors are connected directly to the pump. With hollow shaft motors, the pump downthrust is carried by a thrust bearing built-in the motor. The drive shaft extends up through the motor shaft and is properly secured at the top.

With solid shaft motors, the headshaft is connected to a heavy oil lubricated ball bearing thrust assembly, located on the pump base plate. If the thrust load is more than the ball bearing assembly capacity then tilting pad type bearings are located on the base plate.

Bearings are oversized to assure a minimum life of 40.000 hours operation. Horizontal electric motors or internal combustion engines are connected to the pump through suitable right angle gear drive or belt drive.

## Part List For Standard Application

ITEM	DESCRIPTION	MATERIAL
1	Head Shaft	AISI 420
2	Stuffing Box	ASTM A48
3	Discharge Elbow	ASTM A48 / Fabricated Steel
4	Base Plate	ASTM A48 / Fabricated Steel
5	Column Pipe	Fabricated Steel
6	Line Shaft	AISI 420 / AISI 316
7	Bearing Retainer	ASTM A48

ITEM	DESCRIPTION	MATERIAL
8	Bearing	Rubber / SAE 63
9	Shaft Coupling	AISI 420 / AISI 316
10	Pump Shaft	AISI 420 / AISI 316
11	Diffuser	ASTM A48
12	Impeller	ASTM A48 / SAE 63 / AISI 316
13	Suction Bell	ASTM A48
14	Grease Tube	AISI 316

## Performance

### Vertical Flow Turbine Pumps

- Q: 10 - 30.000 m<sup>3</sup>/h capacity & Head up to 600m.
- Water, oil & grease lubricated options

### Axial Flow Turbine Pumps

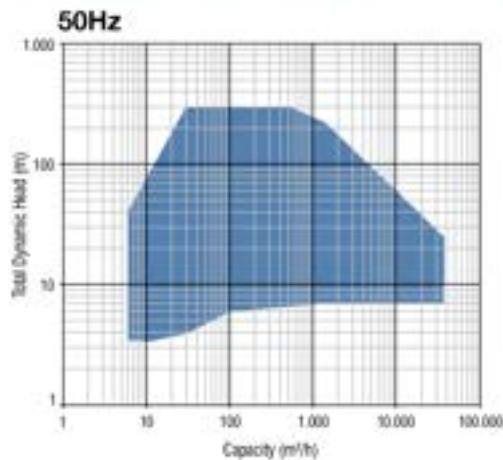

- Q: 900 - 20.000 m<sup>3</sup>/h capacity & Head up to 8m.
- Water, oil & grease lubricated options

### Applications

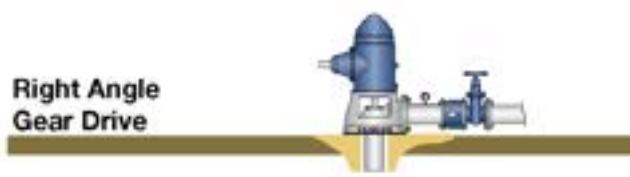

- Municipal water
- Irrigation
- Industrial
- Power generation
- Oil & Gas production
- Mining
- Storm water
- Sump service

# AIR OPERATED DOUBLE DIAPHRAGM PUMPS

PAGE  
314

## Fluid Section Materials

**Aluminium**

Medium corrosion and abrasion resistance. Not for use with halogenated hydrocarbons.

**Polypropylene**

Wide chemical compatibility. General purpose.

**Conductive Polypropylene**

Wide chemical compatibility. General purpose. Groundable.

**Stainless Steel (316 Grade)**

High level of corrosion and abrasion resistance.

**Acetal**

Wide range of solvent resistance. Withstands extreme fatigue. Good level of abrasion resistance. Groundable for use with flammables. Not for use with acids or bases.

**Ductile Iron**

High abrasion resistance.

**Hastelloy**

Good resistance to aggressive chemicals in corrosive environments. Compatible with high temperature fluids.

**PVDF**

Strong chemical resistance to acids and bases. Good abrasion resistance. High temperature resistance.

## Diaphragm Materials

DIAPHRAGM MATERIAL*	DESCRIPTION
PTFE/EPDM Two Piece	Widest chemical compatibility, extreme corrosion resistance, very low frictional coefficient, non-adhesive, high heat resistance.
PTFE/EPDM Overmolded	Same as above. Overmolded design improves wear, durability and cleanability. Longer life than above.
Thermoplastic Polyester Elastomer (TPE)	Good low temp properties. Good abrasion resistance. Often substituted for Buna.
Santoprene	Good abrasion and chemical resistance. OK for use with some solvents (e.g. MEK, Acetone), caustic solutions, dilute acids, and alcohols. Often substituted for EPDM or EPR.
Buna	Good for petroleum-based fluids, water, oils, hydrocarbons and MILD chemicals (e.g. mineral spirits).
Fluoroelastomer (FKM)	High heat resistance. Good resistance to aggressive chemicals including acids and some solvents (e.g. xylene and mineral spirits). Good resistance to steam as well as animal, vegetable, and petroleum oils. Resists unleaded fuels.
Geostar	Good abrasion resistance. Approximately same chemical compatibility as Buna.
Polychloroprene Overmolded (CR)	High resilience. Good with whiskey, wine, beer and natural gas. One source calls an "all purpose Polymer". About 30% higher abrasion resistance than Buna.
EPDM, used with 3A pump (Ethylene Propylene Diene M-class rubber)	High heat resistance. Good resistance to gas permeability and to steam. OK with caustic solutions, dilute acids, ketones and alcohols. Recommended for use with CIP Sanitizing Agent OXONIA.

\*Available materials of construction varies depending on pump model

## Pump Designation

Part numbers are located on ID tag on centre section of all Husky diaphragm pumps.

## SANIFORCE SERIES

## Technical Specifications

1590	
Maximum fluid working pressure	120 psi (8 bar; 0.8 MPa)
Maximum free-flow delivery	90 gpm (340 lpm)
Maximum suction lift	28 ft (8.5 m) wet, 15 ft (4.57 m) dry
Maximum size pumpable solids	5/8 in (15.9 mm)
Air pressure operating range	20-120 psi (1.4-8 bar; 0.14-0.8 MPa)
Maximum air consumption	125 scfm
Air consumption at 70 psi air inlet pressure/60 gpm	50 scfm
Maximum pump speed	200 cpm
*Gallons (liters) per cycle	0.5 (1.96)
**Maximum noise level at 100 psi, full flow	90 dBA
**Sound power level	103 dBA
**Noise level at 70 psi and 50 cpm	85 dBA
Air inlet size	0.5 in npt(f)
Weight	97 lb (44 kg)
Flyer	338499
Instruction manual	310622
<b>MAXIMUM FLUID OPERATING TEMPERATURE IS BASED ON THE FOLLOWING MAXIMUM DIAPHRAGM, BALL, AND SEAT TEMPERATURE RATINGS</b>	
PTFE	220°F (104.4°C)
Santoprene	180°F (82.2°C)
3A Approved EPDM	275°F (135°C)

\* Displacement per cycle may vary based on suction condition, discharge head, air pressure and fluid type

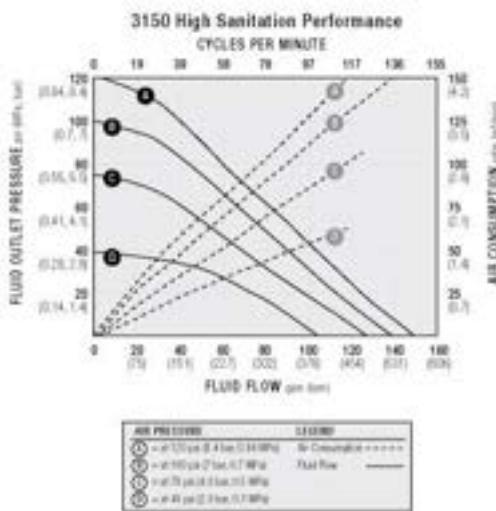

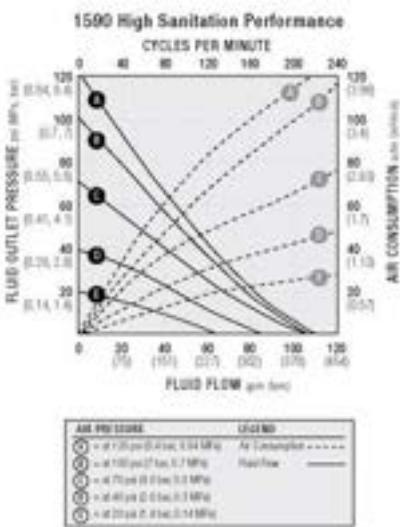

\*\* Noise levels measured with the pump mounted on the stand. Sound power measured per ISO Standard 9614-1

3150	
Maximum fluid working pressure	120 psi (8 bar; 0.8 MPa)
Maximum free-flow delivery*	150 gpm (568 lpm)
Maximum suction lift - ball	18 ft (5.4 m) wet, 9 ft (2.7 m) dry
Maximum suction lift - flapper	10 ft (3.0 m) wet, 5 ft (1.5 m) dry
Maximum size pumpable solids - ball	1 in (25.4 mm)
Maximum size pumpable solids - flapper	2.5 in (63.5 mm)
Air pressure operating range	20-120 psi (1.4 to 8.4 bar; 0.14 to 0.84 MPa)
Maximum air consumption	175 scfm
Air consumption at 70 psi air inlet pressure/60 gpm	50 scfm
Maximum pump speed	145 cpm
*Gallons (liter) per cycle	1.03 (3.90)
**Maximum noise level at 100 psi, full flow	90 dBA
**Sound power level	103 dBA
**Noise level at 70 psi and 50 cpm	85 dBA
Fluid inlet & outlet size (determined by part number)	Tri-clamp connections
Air inlet size	0.5 in npt(f)
Weight	145 lb (65 kg)
Flyer	338499
Instruction manual	310622
<b>MAXIMUM DIAPHRAGM OPERATING TEMPERATURE</b>	
Santoprene	180°F (82.2°C)
Buna-N	180°F (82.2°C)
PTFE	220°F (104.4°C)
Fluoroelastomer	250°F (121°C)
EPDM	275°F (135°C)

\* Displacement per cycle may vary based on suction condition, discharge head, air pressure and fluid type

\*Includes leak detector

**HIGH SANITATION AND INDUSTRIAL REPAIR KITS\***

PUMP PART NO.	DESCRIPTION
253626	For 1 inch pump size, diaphragm repair kit
253627	For 1.5 inch pump size, diaphragm repair kit
253628	For 2 inch pump size, diaphragm repair kit

\*To replace PTFE overmolded diaphragms

**SANIFORCE 1040, 1590 & 2150 PUMP REPAIR KITS**

PUMP PART NO.	DESCRIPTION
FK1113	For 1 inch pump size, with PTFE o-rings
FK1213	For 1 inch pump size, with EPDM o-rings
FK2113	For 1.5 inch pump size, with PTFE o-rings
FK2213	For 1.5 inch pump size, with EPDM o-rings
FK3113	For 2 inch pump size, with PTFE o-rings
FK3213	For 2 inch pump size, with EPDM o-rings

\*To replace PTFE overmolded diaphragms

**HIGH SANITATION AND INDUSTRIAL UPGRADE KITS\***

PUMP PART NO.	DESCRIPTION
289224	Upgrade kit for 1 inch pump
289225	Upgrade kit for 1.5 inch pump
289226	Upgrade kit for 2 inch pump

Includes new airside diaphragm plate for replacement of standard bolt-through diaphragm.

## Technical Specifications

**OVERMOLDED DIAPHRAGMS**

Material/Construction on wetted side	FDA-Compliant PTFE
Material/Construction on air side	FDA-Compliant EPDM
Temperature range	14°F to 180°F (-10°C to 82°C)
Flex life	5x original Graco 2-piece PTFE diaphragm sets
Safety	Complies to FDA21CFR 177.1550 (PTFE) and FDA21CFR 177.2600 (EPDM)

**DID YOU KNOW?**

Over moulded diags last  
3 times longer!

## ACCESSORIES

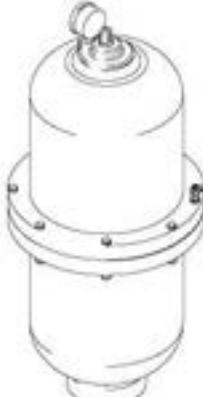

## Ordering Information

<b>HUSKY 1050, 1590, 2150</b>		<b>PART NO.</b>
<b>AIR CONTROLS</b>		
Regulator / Filter Assembly 1/2" npt(f) (12.7 mm)		246947
Quick Connect Air Coupler 1/2" npt (12.7 mm)		110199
Quick Connect Air Nipple 1/2" npt (12.7 mm) mbe		110196
Air Shut Off Valve 1/2" npt (12.7 mm), bleed type, relieves trapped air downline of valve		110225
Air Runaway Valve (stop pump from cavitating when empty)		224040
Air Muffler (comes with pump) 1050 pumps		240642
Air Muffler (comes with pump) 1590 and 2150 pumps		102656
Centre Section Conversion Kit (converts an Aluminium centre section to st. Includes air covers).		
- Husky 1590		246451
- Husky 2150		246452
<b>208 LITER (55-GALLON) SIPHON KIT</b>		
Siphon kit is used for drawing fluids from 55-gallon sized containers, through a 2" bung opening. Kit comes with carbon steel tube, 8' (2.44 m) polyethylene hose and couplings		222916
<b>REMOTE PUMP CONTROLLERS</b>		
CycleFlo (cpm rate and batch control) 120V		195264
CycleFlo (cpm rate and batch control) 240V		196706
CycleFlo II (rate controller with solenoid valve) 120V		195265
<b>Dual Inlet Manifold</b>		
Aluminium Husky 1050 only		240205
<b>Conversion Kits</b>		
Remote Valve Conversion Kit for Aluminium Husky 1050 only		24D037
Remote Valve Conversion Kit for Polypropylene Husky 1050 only		24D038
Remote Valve Conversion Kit for Conductive Polypropylene Husky 1050 only		24D039
<b>SURGE SUPPRESSORS</b>		
Surge suppressors are designed to reduce the pulsation caused during pump changeover. The suppressor construction is generally closely matched with the pump's material (Stainless Steel with Stainless Steel, Acetal with Aluminium, etc.) and are available in either an adjustable or automatic version. See 308703 for details.		
<b>Automatic Husky 2000, 50.8 mm (2")</b>		
Polypropylene (wetted bottom and top housings) with a Buna N bladder		239092
- with PTFE bellows		239128
Stainless Steel (wetted bottom and top housings) with a Buna N bladder		239093
- with PTFE bellows		239126
- with a Fluoroelastomer bladder		239127
<b>Adjustable Husky 2000, 50.8 mm (2")</b>		
Polypropylene (wetted bottom and top housings) with a Buna N bladder		239087
- with PTFE bellows		239136
Stainless Steel (wetted bottom and top housings) with a Buna N bladder		239088
- with PTFE bellows		239134
- with a Fluoroelastomer bladder		239135

<b>HUSKY 1050, 1590, 2150 (CONTINUED)</b>		<b>PART NO.</b>
<b>PTFE/EPDM Overmolded Diaphragms</b>		
Industrial upgrade kits - includes new airside diaphragm plate		
- Upgrade kit for 2.54 cm (1") Husky 1040 pump		289224
- Upgrade kit for 2.54 cm (1") Husky 1050 pump		248626
- Upgrade kit for 3.81 cm (1.5") pump		289225
- Upgrade kit for 5.08 cm (2") pump		289226
<b>UL PUMPS</b>		
For use with leaded and unleaded fuels		
- Husky 1050 for use with leaded fuel (seat, ball, diaphragm)		647016
- Same as 236265, maximum inlet of 3.4 bar (0.3 MPa - 50 psi)		647648
<b>LEAK DETECTOR</b>		
Leak detectors are designed to shut off the pump in the event a diaphragm fails. The leaking material flows out the air section and is captured by the leak detector reservoir. Once the reservoir is filled, a signal is sent that would shut off the pump. These detectors should only be used when a massive failure is allowed.		
Polypropylene Housings with PVC Wetted Parts		239080
Shut Off Valve Kit (used in conjunction with 239080)		113870
<b>Wall Mounting Bracket</b>		
Wall mounting bracket for Husky 1050 pumps - NOT FOR HASTELLOY OR STAINLESS STEEL		24C637
<b>MISCELLANEOUS ACCESSORIES</b>		
Flange Kits. Used to transition a flanged pump to a npt connection to transition from a threaded connection to a flange. It is recommended that the flange kit be compatible with the pump material.		
Polypropylene 24.14 mm (1") flange for Husky 1050 D72XXX pumps. 1" ANSI x 1" npt (f)		239005
Stainless Steel 24.14 mm (1") flange for Husky 1050 D71XXX and D74XXX pumps 1" ANSI x 1" npt (f)		239008
PVDF 24.14 mm (1") flange for Husky 1050 D75XXX pump 1" ANSI x 1" npt (f)		239009
Polypropylene 36.84 mm (1-1/2") flange for Husky 1590 DB2XXX pump 1-1/2" ANSI x 1-1/2" (f)		239006
PVDF 36.84 mm (1-1/2") flange for Husky 1590 DB5XXX pump. 1-1/2" ANSI x 1-1/2" (f)		239010
Polypropylene 48.28 mm (2") flange for Husky 2150 DF2XXX pump. 2" ANSI x 2" (f)		239007
PVDF 48.28 mm (2") flange for Husky 2150 DF5XXX pump 2" ANSI x 2" (f)		239011
<b>HUSKY 3300</b>		<b>PART NO.</b>
<b>AIR CONTROLS</b>		
Regulator / Filter Assembly 3/4" npt(f) (19.5 mm)		246948
Quick Connect Air Coupler 3/4" npt (19.5 mm) - female		110200
Quick Connect Air Nipple 3/4" npt (19.5 mm) mbe - male		110197
Air Shut Off Valve 3/4" npt (19.5 mm), bleed type, relieves trapped air downline of valve		110226
Air Runaway Valve (stop pump from cavitating when empty)		224040
Air Muffler (comes with pump)		24P932
<b>208 Liter (55-GALLON) SIPHON KITS</b>		
Typically, 3" pumps are not used for emptying 208 liter (55-gallon) containers. N/A		
<b>REMOTE PUMP CONTROLLERS</b>		
Husky 3300 pumps are not equipped to run in remote mode		N/A
<b>SPLIT MANIFOLD KITS</b>		
There are no Husky 3300 with a split manifold option		N/A
<b>SURGE SUPPRESSORS</b>		
Surge suppressors are designed to reduce the pulsation caused during pump changeover. The suppressor construction is generally closely matched with the pump's material (Stainless Steel with Stainless Steel, Acetal with Aluminium, etc.) and are available either in adjustable or automatic version. See 308703 for details.		
Automatic Husky 2000, 50.8 mm (2 in)		
Polypropylene (wetted bottom and top housings) with a Buna N bladder with PTFE bellows		239092
Manual Husky 2000, 50.8 mm (2 in)		239128
Polypropylene (wetted bottom and top housings) with a Buna N bladder with PTFE bellows		239087
<b>DATATRACK KITS*</b>		
Aluminium Pulse Count & Runaway Protection		24K861
Aluminium Pulse Count Only		24B795
Polypropylene Pulse Count & Runaway Protection		24K852
Polypropylene Pulse Count Only		24B794

\* Kit includes replacement airvalve compatible with solenoid

309003	CycleFlo Instruction Manual
309004	CycleFlo II Instruction Manual

## Product Selector

Highlighted areas indicate the different sizes of remote pumps and available materials of construction for seats, balls and diaphragms that can be used with the CycleFlo and CycleFlo II controller.

PUMP SIZE (AIR MOTOR TYPE AND MATERIAL)	WETTED PARTS	SEATS	BALLS	DIAPHRAGM
2 = 6.35 mm (1/4") Remote: polypropylene centre section	1 = Acetal (npt)	0 = Seat with ball	1 = PTFE	1 = PTFE
4 = 12.7 mm (1/2") Remote: polypropylene centre section	2 = Poly (npt)	2 = Acetal	2 = Acetal	5 = TPE
4 = 19.05 mm (3/4") Remote: polypropylene centre section	3 = Aluminium (npt)	3 = Stainless Steel	3 = Stainless Steel	6 = Santoprene
8 = 25.4 mm (1") Remote: Aluminium centre section	4 = Stainless Steel (npt)	4 = Hardened SST	4 = Hardened SST	7 = Buna N
5 = 25.4 mm (1") Remote: stainless steel centre section	5 = PVDF (npt)	5 = TPE	5 = TPE	8 = Fluoroelastomer
C = 38.1 mm (1-1/2") Remote: Aluminium centre section	6 = Ductile Iron (npt)	6 = Santoprene	6 = Santoprene	G = Gelast
U = 38.1 mm (1-1/2") Remote: stainless steel centre section		7 = Buna N	7 = Buna N	
G = 50.8 mm (2") Remote: Aluminium centre section	A = Acetal * (bsp)	8 = Fluoroelastomer	8 = Fluoroelastomer	
W = 50.8 mm (2") Remote: stainless steel centre section	B = Poly * (bsp)	9 = Polypropylene	9 = Polypropylene	
	C = Aluminum (bsp)	A = PVDF	A = PVDF	
	D = Stainless Steel (bsp)	G = Gelast	G = Gelast	
	E = PVDF (bsp)			
	F = Ductile Iron (bsp)	B = SST with viton seal		
	H = 2 npt Alum Extended	C = Santoprene with viton seal		
	G = 2 bsp Alum Extended	D = Urethane Duckbill		

## Mounting Dimensions

\* Displacement values are estimates based on average running conditions.

## How To Determine The Best Remote Pump:

1. Configure the best seat, ball and diaphragm combination, as well as fluid wetted parts, based on material compatibility and application requirements.
  - If the material is a mild acid, the choice could be a DX2911.
2. Determine dispense time and volume accuracy.
  - In two minutes, 185 liter (50 gallons) need to be dispensed ±5% accuracy
3. Use the displacement volume chart below to choose the pump size with an outlet volume/cycle that is most closely divisible into your required flow.\*
  - Husky 1590 produces 1.85 l/cycle (.5 gal/cycle)
  - Husky 2150 produces 3.8 l/cycle (1.03 gal/cycle)

	HUSKY 205	HUSKY 515	HUSKY 716	HUSKY 1050	HUSKY 1590	HUSKY 2150
Volume/cycle	1/4"	1/2"	3/4"	1"	1-1/2"	2"
Cubic centimeters (cc)	46	150	150	644	1960	3000
Liters	0.05	0.15	0.15	0.64	1.96	3.9
Grams (assumes s.g = 1.0)	46	150	150	644	1960	3000
Kilograms (kg)	0.05	0.15	0.15	0.64	1.96	3.9
Gallons	0.01	0.04	0.04	0.17	0.50	1.03
Quarts	0.05	0.16	0.16	0.68	2.0	4.12
Pints	0.1	0.32	0.32	1.36	4.0	8.24
Ounces	1.54	5.12	5.12	21.8	64.0	131.84
Cubic Inch	2.77	9.24	9.24	39.27	115.5	237.93

4. Determine the number of cycles required. Calculate the dispense time by dividing required flow by outlet volume per cycle.
  - Husky 1590 = 185 l / 1.85 l/cycle (50 gal / 0.5 gal/cycle) = 100 cycles
  - Husky 2150 = 185 l / 3.8 l/cycle (50 gal/1.03 gal/cycle) = 48.55 cycles
5. Determine if cycle output is within the dispense accuracy required.
  - Husky 2150 requires 48.55 cycles to pump 185 liter (50 gallons). Only full cycles are possible, so either 48 or 49 cycles can be counted. At the 48 cycle count, dispense would be 183 liter (49.44 gallons). At the 49 cycle count, dispense would be 187 liter (50.47 gallons).
  - Husky 1590 requires 100 cycles to pump 185 liter (50 gallons). No partial cycles required.
6. After determining the best size, use the pump ordering matrix to decide which remote centre section is most suitable for the application – DC2911 (Aluminium centre section) or DU5911 (stainless steel centre section).
  - Since a mild acid is being pumped, DC2911, an Aluminium centre section would be the best choice.

A large industrial machine, likely a piston pump or drum unloading system, is shown in the background. It features a black vertical frame with various mechanical components, hoses, and a prominent red and white striped pipe. A green flexible hose connects the main unit to a smaller assembly on the right. The machine is mounted on a metal frame and sits on a concrete floor.

### MOTOR CONVERSION KITS

PART NO.	DESCRIPTION
24C743	To install an L200CM Check-Mate displacement pump on an existing King air motor
24C744	To install an L500CM Check-Mate displacement pump on an existing King air motor
24D625	To install an L500CM Check-Mate displacement pump on an existing Viscount II hydraulic motor

### PUMPS WITH SEALED WET CUP

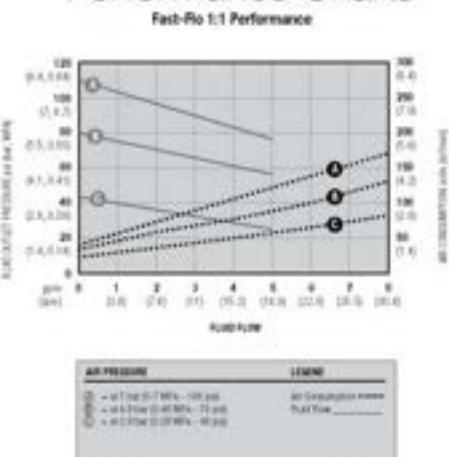

Stroke length Pneumatic Hydraulic	120.65 mm (4.75 in) 119.13 mm (4.69 in)
Maximum fluid operating temperature	82.3°C (180°F)
Air or Hydraulic Inlet Size	3/4 npt (f)
Fluid outlet size	200 cc displacement pump: 1 npt (f) 500 cc displacement pump: 1-1/2 npt (f)
Maximum pump speed	60 cpm

(Do not exceed maximum recommended speed of fluid pump, to prevent premature pump wear)

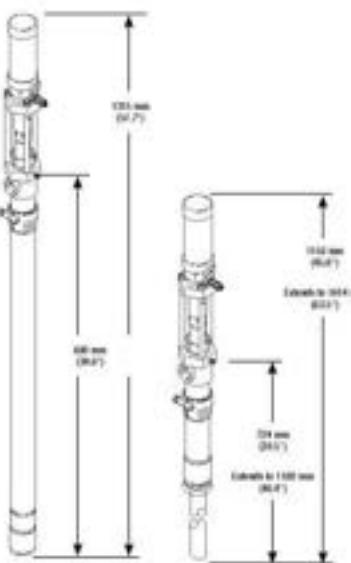

### OTHER

PART NO.	DESCRIPTION
222780	Floor Stand Kit (See manual 307971)

## PULSATION DAMPENERS

**BIACOH™**  
FLUID CONTROL

PAGE  
370

The patented **SPILLSTOP Leak Containment System** attaches directly to the exhaust of an air operated diaphragm pump. When pump diaphragms fail, SPILLSTOP captures dangerous and/or expensive process fluid in an internal receptacle while raising a float switch to automatically shut down the pump. SPILLSTOP can also be configured to sound a warning alarm and/or initiate a backup pump switchover.

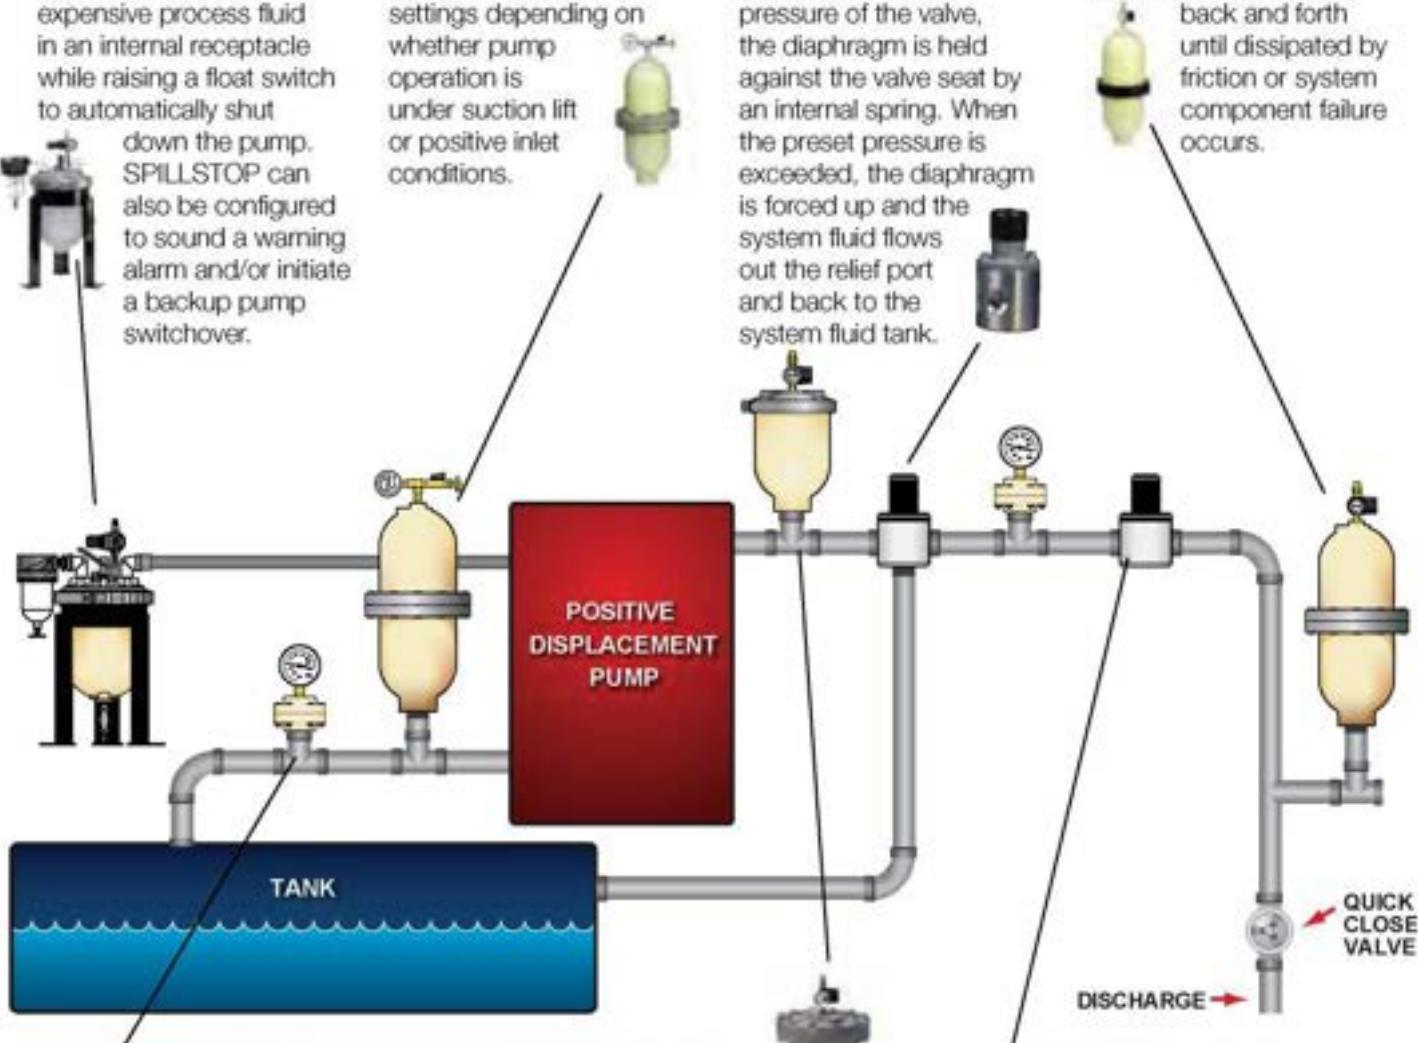

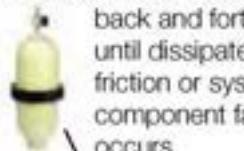

**SENTRY Inlet Stabilizers** accumulate liquid at the pump's inlet to ensure complete chamber fill and extend the service life of all inlet system components. The patented "J" Model air control allows you to adjust for pressure or vacuum settings depending on whether pump operation is under suction lift or positive inlet conditions.

**SENTINEL Pressure Relief Valves** protect pumping systems from overpressure damage caused by defective equipment or a blockage in the system line. When the pressure in the system exceeds the preset pressure of the valve, the diaphragm is held against the valve seat by an internal spring. When the preset pressure is exceeded, the diaphragm is forced up and the system fluid flows out the relief port and back to the system fluid tank.

**SENTRY Surge Suppressors** eliminate hydraulic shock and water hammer caused by quick-closing valves, back surge and pump startup/shutdown. Without suppression, shock waves will continue to oscillate back and forth until dissipated by friction or system component failure occurs.

**SENTRIL Diaphragm Seals** employ a chemically resistant diaphragm to effectively isolate process fluids from gauges and other process instrumentation.

This durable diaphragm allows SENTRIL to accurately transfer process pressure without direct contact with hazardous or corrosive fluids.

**SENTRY Pulsation Dampeners** use a compressed gas separated from the process fluid by a bladder to act as a shock absorber. During the pump's discharge stroke, fluid pressure displaces the bladder compressing the trapped gas. Compressed gas expands during the pump's inlet stroke, forcing the bladder to push accumulated fluid back into the discharge line. This fills the void created by the cycle shift and dampens pulsations and vibration up to 99%.

**SENTRY Back Pressure Valves** enhance system performance by applying a continuous back pressure to the pump. The diaphragm is held against the valve seat by an internal ring. When the valve's preset pressure is exceeded, the diaphragm is forced up and system fluid flows through the valve to the injection point.

When pump diaphragms fail, SPILLSTOP captures dangerous and/or expensive process fluid in an internal receptacle while raising a float switch to automatically shut down the pump. SPILLSTOP can also be configured to sound a warning alarm and/or initiate a backup pump switchover.

**SENTINEL™ PRESSURE RELIEF VALVE**

**SENTINEL** Pressure Relief Valves protect pumping systems from over-pressure damage caused by defective equipment or a blockage in the system line. They consist of a spring and diaphragm that is pushed down on a seat to a preset adjustable pressure setting. Once the pressure is exceeded, the seat is lifted off the relief port and the excess fluid pressure flows back to a holding tank or the suction side of the pump. When the pressure is reduced, the spring pushes the seat back over the discharge port.

**SENTINEL™ BACK PRESSURE VALVE**

**SENTINEL** Back Pressure Valves enhance system performance by applying a continuous back pressure to the pump. The diaphragm is held against the valve seat by an internal ring. When the valve's present pressure is exceeded, the diaphragm is forced up and system fluid flows through the valves to the injection point.

**SENTINEL™ CHECK VALVE & BALL VALVE**

By preventing reverse flow, **SENTINEL** Check Valves and Ball Valves can be used as one-way valves, injection valves, or to prevent backflow. The internal ball or poppet functions as a positive shutoff to ensure process fluid does not go back up the line.

**TRACKING GAUGE**

Attachable Tracking Gauge captures the maximum system pressure and spikes with the additional tracking needle. Options with pressure ratings 0-2000 PSI/BAR and a 4.5" gauge face.

**CHARGING KIT**

Charging Hose Kit for Blacoh CT, H, TG or XP models. Includes an 8' (2.4 m) length of hose with a 1/4" (6mm) NPT male fitting at one end for connection to a regulator at the Nitrogen source and a charging fitting and gauge on the opposite end.

**Air Control Types**

TYPE	DESCRIPTION	MAX PRESSURE	INSTALLATION
ADJUSTABLE	<ul style="list-style-type: none"> <li>- Mounted on single port</li> <li>- Self relieving regulator</li> <li>- Gauge and one-way check valve</li> <li>- Compressed air line must be permanently attached to the regulator</li> </ul>	150 psi (10.3 bar)	<ul style="list-style-type: none"> <li>- Within 10 pipe diameters of pump discharge</li> <li>- Connect to a constant source of air</li> <li>- Do NOT use oxygen</li> <li>- Charge dampener to 80% of operating pressure</li> <li>- Adjust dampener PSI to minimize pulse level</li> </ul>

## Bladders & Bellows - Size & Materials

CAPACITY	BLADDERS	PTFE BELLows
Atlas	-18°C to +204°C	High temperature, petroleum-based chemicals, strong acids and bases.
Buna	-12°C to +82°C	Good flex life; use with petroleum, solvents and oil-based fluids.
FDA Buna	-12°C to +82°C	FDA-approved food grade; similar characteristics of regular Buna.
EPDM	-51°C to +138°C	Use in extreme cold; good chemical resistance with ketones, caustics.
Hypalon	-29°C to +135°C	Excellent abrasion resistance; good in aggressive acid applications.
Neoprene	-18°C to +93°C	Good abrasion resistance and flex; use with moderate chemicals.
PTFE	-29°C to +104°C	Bellows design; excellent flex life; use with highly aggressive fluids.
Santoprene	-29°C to +107°C	Excellent choice as a low cost alternative for PTFE in many applications.
FDA Silicone	-29°C to +149°C	FDA-approved food grade material; for use in food and pharmaceutical processing.
USP Class VI Silicone	-29°C to +149°C	Pharmaceutical grade material; for use in food and pharmaceutical processing.
Viton®	-23°C to +177°C	Use in hot and aggressive fluids; good with aromatics, solvents, acids and oils.

## OVERVIEW

The KDP is a mechanical diaphragm pump that uses a heavy duty gear box coupled to an eccentric block to actuate the diaphragm. It is belt driven by pulleys which enables it to use a variety of drive options.

With its heavy duty construction, ability to run dry and self-prime, the KDP pump is suitable for a wide range of applications including dewatering, transfer, oil skimming & oil/water separation.

- Applications:**
- Dewatering excavation
  - Raw sewage
  - Pool maintenance and construction
  - Waste treatment plants
  - Oil skimming
  - Bore desludging
  - Oil/Water separators
  - Machine sumps
  - Priming large centrifugal pumps
  - Industrial wastes
  - Liquid manure
  - Septic tank cleaning
  - Drum emptying
  - Abattoirs
  - Poultry processing and Spillage mop up.

- Features:**
- Suction lifts to 7.5m
  - Rapid self priming
  - Will run dry without damage
  - Heavy duty
  - Will operate on sand
  - Will handle abrasive liquids
  - Will pass solids up to 80% port size
  - Compact construction
  - TEFC electric motors fitted as standard
  - Special electric motor enclosures as an option

# OVERVIEW

## MATERIALS OF CONSTRUCTION

COMPONENT	STANDARD	OPTIONAL
Wetted (Casing and Ports)	Aluminium	Cast Iron / 316 Stainless Steel
Diaphragm	Buna-N (NITRILE)	Neoprene / Viton
Flap Valve / Gasket	Buna-N (NITRILE)	Polyetherene
Valve Seat	316 Stainless Steel	

## CARRY FRAME

All sizes can be fitted with a carry frame

KDP50 and KDP76 can be supplied with a petrol engine which enables increased portability in applications such as:

PETROL/DIESEL
Site Dewatering
Excavation Dewatering
Pool Maintenance / Construction
Construction Sites

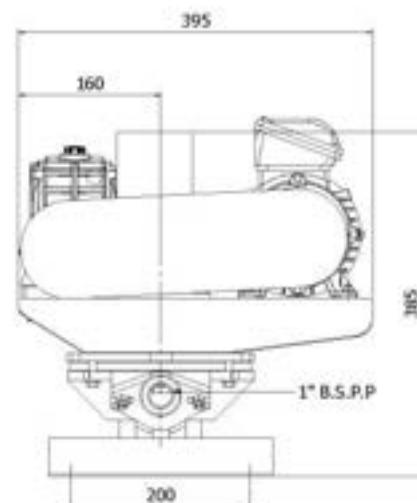

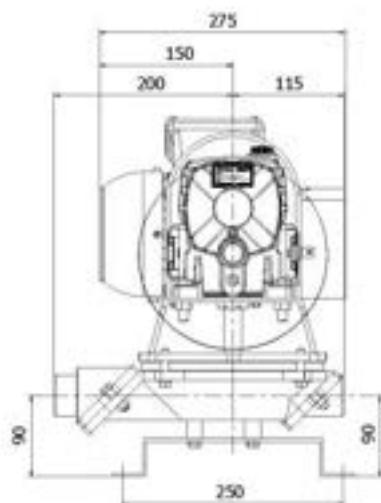

All pump sizes are available with the following electric motor options:

ELECTRIC
240V (Single Phase)
415V (Three Phase)
415V (Three Phase), Ex'e'
415V (Three Phase), Ex'd'

## PROCESS PUMPS

Gear pumps are a type of rotary positive displacement pump, meaning they pump a constant amount of fluid for each revolution. Gear pumps transfer fluid by gears coming in and out of mesh to create a low-pulsating pumping action. Gear pumps are able to pump at high pressures and excel at pumping high viscosity liquids efficiently.

Therefore a gear pump is well suited for handling viscous liquids such as fuel and lubricating oils. Gear pumps are not suited for pumping solids and abrasive liquids.

Internal and external gear pumps are the two basic types of gear pumps. Both the internal and external gear pumps have an idler gear that is driven by the driving gear and both use the same method of gears coming in and out of mesh to create a pumping action. The main differences between the two gear pumps are the placement of the gears and where the fluid is trapped.

## Gear Pump Types

### Internal Gear Pumps - Tuthill

The internal gear pump has an external gear with a smaller internal gear inside of it. Since the internal gear is smaller when the gears come out of mesh on the intake side it creates pockets, between the external and internal gears teeth, which is where the fluid is transported. Internal gear pumps are ideal for pumping high viscosity fluids, but pumping large solids can damage the pump.

### External Gear Pumps - Roper(Helical), Koshin, KGC, Oberdorfer (Spur Gear Pumps).

The external gear has two identical gears that rotate against each other to create a pumping action. The fluid travels from the intake to the discharge side of the pump between the gear's teeth and pump casing. External gear pumps are used more for applications that call for high pressure or high flow.

CHEMICAL PROCESSING

ASPHALT PRODUCTION

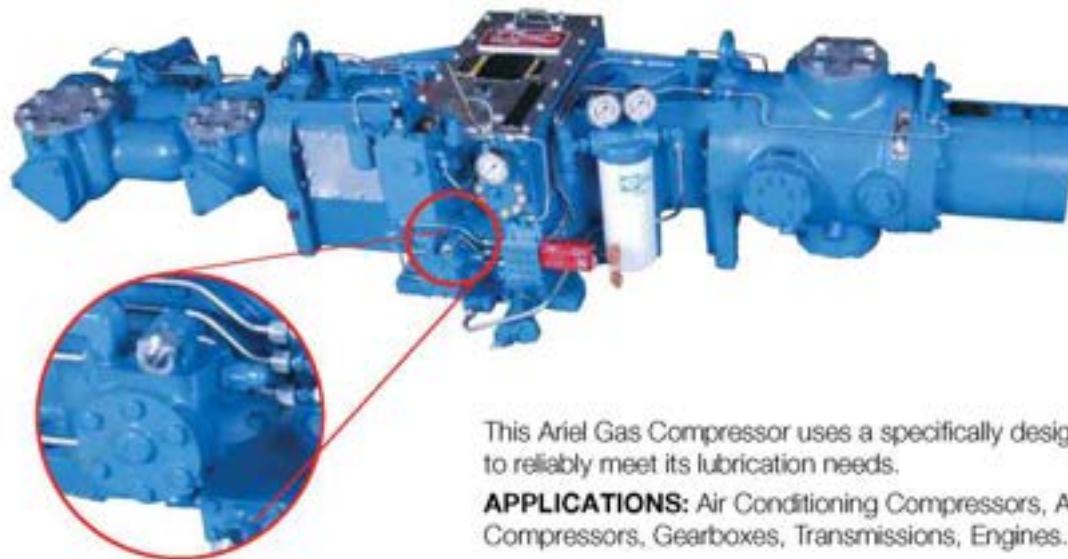

## L &amp; C SERIES

The L & C Series cast iron positive displacement pumps have been the industry standard for Lubrication & Circulation for over 75 years. They were originally designed under James B. Tuthill, the company's founder, in the 1920s. For eight decades, Tuthill has worked to improve these pumps to fit an ever-growing range of lubrication applications. The result is a family of reliable internal gear pumps that are ideal for custom OEM lubricating, low pressure hydraulic, transfer, circulating, burner oil and many other industrial pump applications.

**Flexibility and Reliability to Meet Your Needs!**

L & C series pumps are precisely machined and assembled with only two moving parts, so they achieve and retain their reliability over a wider range of viscosities than alternative pump designs. They are also available with Tuthill's unique reversing feature, as well as mounting, driving and sealing options to suit all your applications.

This Ariel Gas Compressor uses a specifically designed Tuthill L Series Pump to reliably meet its lubrication needs.

**APPLICATIONS:** Air Conditioning Compressors, Air Compressors, Gas Compressors, Gearboxes, Transmissions, Engines.

**DID YOU KNOW?**

That All Pumps can couple these pumps to almost any motor or engine type?

To find out more call 1300 255 786

**Perfect Match For Many OEMs.**

Original Equipment Manufacturers worldwide incorporate Tuthill internal gear pumps into their products for lubrication and transfer service. This widespread acceptance is a result of product performance and reliability.

It is also a result of the Tuthill Business System. The process begins with listening to the wants and needs of our customers and the marketplace. This enables us to quickly engineer customised solutions that provide maximum value and have made us the leading source for custom OEM positive displacement pumps.

L & C Series Pumps' **SIMPLE, COMPACT DESIGN** offers high efficiency and longer life!

## The Pumping Principle

Tuthill L & C Series cast iron pumps employ the internal gear pumping principle. There are only two moving parts. Pumping action is based on a rotor, idler gear and a cover cast with a crescent-shaped partition.

This design allows the pump to handle a wide range of viscosities while sustaining a constant flow regardless of pressure. The non-pulsating flow also runs substantially quieter than other pump designs. With minimal to moderate wear, our internal gear pumps outperform other pumping technologies.

		
As the pump starts, the teeth come out of mesh, increasing the volume. This creates a partial vacuum, drawing the liquid into the pump through the suction port.	The liquid fills the spaces between the idler and rotor teeth and is carried past the crescent partition through the pressure side of the pump.	When the teeth mesh on the pressure side, the liquid is forced from the spaces and out through the discharge port.
<b>UNIQUE REVERSING FEATURE</b> This Tuthill innovation allows positive reversing action without the use of valves. Port positions remain constant regardless of the direction of shaft rotation. It is ideal for use in power transmission applications where the drive shaft direction changes, but the direction of flow must remain constant. Other applications where shaft rotation is unknown, the reversing feature allows the customer to specify the suction and discharge ports.		
	When shaft rotation changes from clockwise to counter-clockwise, the idler carrier (including the idler gear and crescent) automatically rotates 180° through the suction zone to the position shown in the drawing above. This changes the direction of the flow within the pump without changing port positions. On resumption of clockwise rotation, the crescent will swing back to the original position.	

## L &amp; C SERIES

## L Series Pump Range

- Internal gear pump design
- Compact and flexible drive options
- Available with Tuthill's Reversing Feature
- Flow rates to 3m³/hr
- Pressures to 34.5 bar
- Standard with single mechanical seal
- Cast iron construction

## Cartridge Pumps

- Internal gear cartridge pump design
- Compact design mounts directly to OEM equipment
- Multiple porting and driving options
- Flow rates to 1.4m³/hr
- Pressures to 10.3 bar
- Cast iron construction

## DID YOU KNOW?

## 2C2F-6C2F (Shaft Lip Seal):

Model C2F pumps were specifically developed for flange mounting applications and for close coupling to Tuthill's special motors to provide extremely compact close-coupled combinations. Model C2F pumps are supplied with a single spring-loaded lip seal, and can handle inlet pressures to 25 PSI. Designed for direct drive service, these pumps incorporate precision bronze bearings and may be also supplied with a shaft modification for driving the pump directly from existing shafts without couplings. The C2F pumps have a maximum differential capability of 100 PSI.

## 2C2FA-6C2FA (Seal less Design):

Model C2FA pumps are similar in construction to the C2F pumps. They are supplied without a seal for use on OEM built-in applications. The C2FA pumps have a maximum differential capability of 100 PSI.

## 2C2E-6C2E (Shaft Lip Seal With Foot Mount):

For direct-drive service, the C2E pumps have been designed to provide the maximum in compactness. C2E pumps have a spring-loaded lip seal and precision bronze bearings similar to the C2F models. C2EN pumps have an outboard ball bearing and were specifically developed for use with belt drives or similar applications where a side load is applied to the pump shaft. Both C2E and C2EN have an integral mounting foot for a variety of mounting arrangements. Both models can handle inlet pressure to 25 PSI and maximum differential pressures to 100 PSI.

## 2C2B-6C2B &amp; 4312-4316 &amp; 4332-4336 (Shaft Mechanical Seal):

Model C2B/4300 pumps are designed for flange or foot mounting applications. They may also be adapter mounted to "C" face electric motors. C2B/4300 pumps are provided with a mechanical seal capable of handling inlet pressures to 250 PSI at a standard 1725-RPM motor speed with a maximum discharge pressure of 300 PSI. The maximum differential for this pump is 150 PSI. For side load applications an outboard ball bearing feature is available as well.

## 2CK1B-6CK1B (Shaft Mechanical Seal):

Model CK1B pumps are designed for differential pressures to 250 PSI and incorporate a double ball bearing with an inboard heavy-duty roller bearing. They may also be adapter mounted to "C" face electric motors. CK1B pumps are supplied with a mechanical seal capable of handling inlet pressures to 250 PSI at a standard 1725-RPM motor speed with a maximum discharge pressure of 300 PSI. 2C2G-6C2G & 4212-4216 & 4232-4236 (Packing Seal With Foot Mount): Model C2G/4200 pumps have spring loaded Teflon V-rings (Graphite Impregnated) as the shaft seal. They are capable of handling inlet pressures to 25 PSI and differential pressures to 100 PSI.

## 1ACS, 2-4CS, 6ACS &amp; 1CSA-6CSA (Stripped Pumps):

Tuthill's C Series pumps are available in stripped form for use in volume OEM applications where a pump is to be built directly into a piece of equipment.

## GLOBAL GEAR SERIES

## Tuthill GlobalGear® Process Pumps

**The Pump designed for you!**

You told us what you needed in a high-performance process pump – we heard you loud and clear. Our answer is the GlobalGear® Process Pump Series. From the cost-effective GG015 to the workhorse GG250, the entire GlobalGear® Series employs tougher, more reliable parts that have never been easier to service and maintain. Numerous engineering and mechanical patents make our innovative, modular design uniquely equipped to handle the growth and change of your business's needs. And GlobalGear®'s ability to reduce expensive inventories and provide alternatives with minimal switching costs saves you valuable time and money. Tuthill has created the Pump designed for You – the GlobalGear® Process Pump.

**GlobalGear® Pumps are TOUGHER AND MORE RELIABLE.****STANDARD SHAFT SIZES**

Standard shaft sizes let you use seals you probably already have for other rotating equipment.

**BACK PULL-OUT**

The back pull-out design greatly reduces down-time for service—the pump can be repaired without disturbing piping or shaft alignment.

**SPARE DRIVE MODULES**

The back pull-out design allows you to stock a spare drive module instead of a complete pump.

**INLINE SEAL ACCESS**

Inline seal access design reduces seal maintenance time—the seal can be removed without disturbing the piping or shaft alignment.

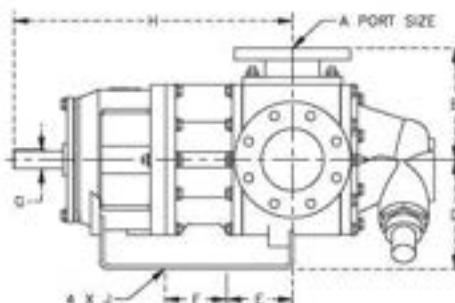

## GLOBAL GEAR SERIES

### NO PIPING CHANGES

GlobalGear® mounting dimensions match those of most other gear pumps.

### NO DRIVE CHANGES

At any given speed, the GlobalGear®'s flow rates match those of most other gear pumps.

### Modular Ports

Several port styles are available to match your piping needs:

- 90° (shown) or 180° port options
- NPT tapped
- BSPT tapped
- ANSI 125#/150# flanged
- ANSI 250#/300# flanged
- ISO PN16 flanged
- ISO PN40 flanged

Each pump size has numerous port size choices to minimise piping losses. For example, GG200 size offers these choices:

- 2" or 50mm
- 2 1/2" or 65mm
- 3" or 80mm
- 4" or 100mm

### Modular Seal Chamber

Modular seal chamber provides a choice of packing, mechanical seal or cartridge seal – without changing major pump components. Our patented bracket and seal enhance the already flexible and versatile design.

## HEAVY DUTY SERIES

## Tuthill Industrial Duty Process Pump

Tuthill HD Industrial Duty process pumps are designed for the most demanding applications.

- Slurries, high viscosity fluids, suspended solids, chemicals, polymers, pharmaceuticals, foods, and shear sensitive fluids.

They are available in a wide range of sizes with differential pressures to 450 PSI and viscosities to 4,400,000 cst.

## Tuthill Standard Duty Process Pump

Tuthill Standard Duty HD process pumps were developed particularly for sanitary applications and have established outstanding performance records in the food processing and chemical processing markets.

The faceplate and impellers of Tuthill's Standard Duty HD process pumps may be quickly removed for easy cleaning and inspection without removal of the process piping. Since the bearing surfaces are located within the pump faceplate, there are only two stuffing boxes, fitted with Teflon® impregnated graphite packing, pure Teflon® packing, or mechanical seal. All materials used in 316 stainless steel pumps are compatible with food products and are USDA approved.

- External timing gears in separate oil filled reservoir provide safe, non-contact synchronous impeller action.
- Oil lubricated roller bearings provide support for maximum radial loading in models 70A, 120A, 330 and 600.
- Constant diameter shafts (no steps in torque transmission areas) for maximum strength and minimum deflection.
- Housing bushing, positioned under maximum radial load, assuring minimum shaft deflection.
- Packing and stuffing box is standard construction. Packing gland is split and constructed in 316SS. Pumps can also be outfitted with mechanical seals.
- Impellers provided in single lobe or double lobe design.
- No metal to metal contact in fluid chamber.
- Housing and gear case are foot mounted to minimise distortion and vibration.
- Heavy duty, grease lubricated, double-row ball bearings for combined radial loading and axial positioning.
- Casings and gear case are precision machined and dowel pin aligned. Procedure results in full interchangeability should field replacement be required.
- Faceplate (cover) accessible and easily removable for easy cleaning and inspection.
- Wingnuts allow easy removal of impeller for cleaning and inspection.
- Faceplate bushings provide simple bearing supports for the impellers - no cantilevered shafts as in some competitive designs.

## DOUBLE LOBE IMPELLERS

Available for higher operating speeds.

## SINGLE LOBE IMPELLERS

Single lobe impellers provide maximum strength for highly viscous fluids and slurries, and high discharge pressure as well as minimal shear characteristics on the fluids.

## EXTERNAL TIMING GEARS

Timing gears are separated from the fluid chamber, thus eliminating a source of agitation and breakdown of the material being pumped.

## STANDARD DUTY SHAFT/IMPELLER

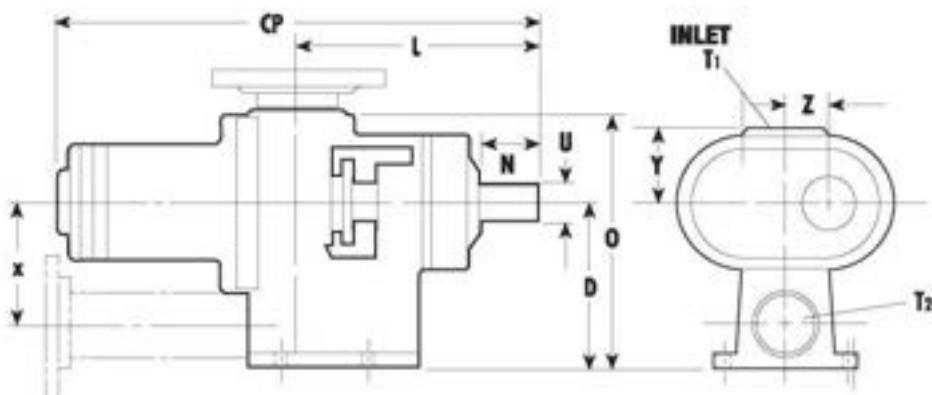

## STANDARD DUTY PUMP FLUID CHAMBER

Faceplate and impellers may be quickly removed for easy cleaning and inspection.

## HEAVY DUTY SERIES

## Heavy Duty Pump Features

**HIGH VISCOSITY** Tuthill HD pumps can handle materials with viscosities to 4,400,000 cst...including silicones, adhesives, pastes, slurries, suspended solids, semi-solids, etc.

**HIGH PRESSURE** Some models can be furnished suitable to operate at differential pressures to 450 PSI.

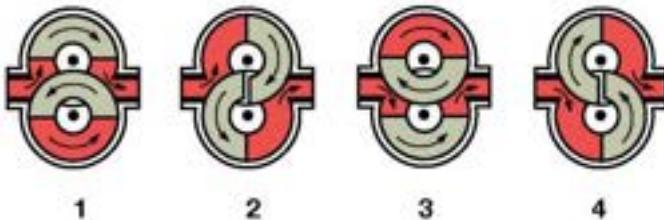

**RUN DRY WITHOUT DAMAGE** The slow positive movement of the impellers and the lack of contact between rotating and stationary elements in the fluid chamber allows HD pumps to run dry without damage. They can operate efficiently where other positive displacement pumps may fail.

**HIGH TEMPERATURE** Pumps can be furnished suitable for use with fluid temperatures to 525°F.

**HIGH VACUUM** Tuthill HD pumps are self-priming and able to operate under high vacuum/low NPSH conditions as well as pressurised inlet conditions.

**EXTERNAL BEARING CHAMBER** Material being pumped through the fluid chamber is separated from lubricated bearings or gear lubricant chambers, eliminating contamination.

## NO METAL-TO-METAL CONTACT IN THE COMPLETELY ISOLATED FLUID CHAMBER

1. Top impeller has started suction cycle and is completing the discharge cycle. Lower impeller is transferring liquid from the suction to the discharge side of the pump.
2. Top impeller completes suction cycle. Lower impeller starting to discharge.
3. Top impeller is transferring liquid from suction to discharge. Lower impeller has started the suction cycle and is finishing the discharge cycle.
4. Top impeller starting discharge cycle. Lower impeller finishing suction cycle.

**SHAFT SEALS** Standard shaft sealing is Teflon® impregnated graphite packing. Pumps are also available with lantern rings, special packings, and triple lip cartridge or mechanical seals.

**EXTERNALLY TIMED GEARS** Timing gears are separated from the fluid chamber, thus eliminating a source of agitation and breakdown of the material being pumped as well as providing a clean source of gear lubrication.

## SLOW SPEED FOR LONGER WEAR AND LOWER SHEAR

Slow speed operation of these pumps creates slow internal velocities which result in increased wear life, impart less shear to the product, and enable the pump to handle high viscosity fluids.

**REVERSIBLE** The direction of flow may be reversed simply by changing the direction of rotation.

**HIGH VACUUM** Tuthill HD pumps are self-priming and able to operate under high vacuum/low NPSH conditions as well as pressurised inlet conditions.

**MATERIALS OF CONSTRUCTION** HD Process pumps are provided as standard in 316 stainless steel or ductile iron. Exotic alloys are also available on a special order basis.

## STANDARD MATERIALS OF CONSTRUCTION

## M SERIES

**Tuthill's M Series magnetic coupled pumps feature a robust design to better withstand the unexpected.**

Process upsets and cold starts can result in decoupling and permanent magnet damage that results in costly repairs and unplanned downtime. Using generously sized high temperature magnets can often prevent this situation. That is what Tuthill delivers in the M series magnetically coupled sealless process pumps. With more robust components and superior engineering, these pumps are much less likely to decouple in upset, cold or high viscosity situations. Even in the event of decoupling or run dry, our high temperature magnets are more likely to survive than standard low temperature magnets found in other pumps. Invest in a better pump to avoid those costly magnetic drive pump repairs.

FLOW CAPACITIES	.5 to 80 GPM (.11 to 18.2 m <sup>3</sup> /hr)
PRESSURE	Up to 500 psi (see model chart)
VISCOSITY	up to 75,000 ssu (16,500 centistokes)
TEMPERATURE	300°F (149°C) standard construction 500 °F (260°C) high temperature construction

## Sealless Construction

No mechanical seals or shaft packing to maintain.

## Applications

Difficult to seal liquids such as:

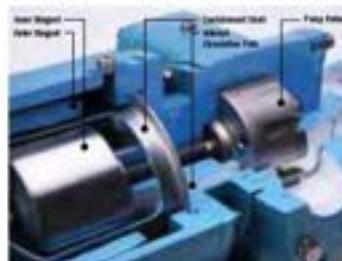

- Isocyanate, Styrene
- Sodium Hydroxide

Hazardous liquids such as:

- Nitrocellulose
- Liquids carrying toxic vapours, solvents, etc.

Suitable for working environments where no leakage can be tolerated.

## Drive Arrangements

Direct Drive Speeds Available to 1750 RPM Compact close-coupled arrangement for ML and MC models Gear reduced arrangements available for the MG models.

## Materials of Construction

- Cast Iron or Stainless Steel Wetted Parts (See model chart)
- Stainless Steel Inner Magnet Assembly and Containment Shell
- Samarium Cobalt High Temperature Rare Earth Magnets Carbon Bushings
- PTFE Encapsulated Viton O-Rings

## Features

- Generously Sized Magnetic Couplings (Helps Avoid Upset Condition Decoupling)
- High Temperature Rare Earth Magnets Supplied As Standard (Better Withstands Temperature Spikes Seen in Upset Conditions)
- Patented Magnet Area Cooling Path for Effective Heat Dissipation
- Thrust Control for Maximum Life and Reliability
- Skid Rings to Prevent Containment Shell Damage

## Options

Relief Valves, High Temperature Pump Construction to 500 °F (260°C), Optional O-Ring Materials

## PROCESS PUMP

## 3600 Series Heavy Duty Pumps

**General Purpose Pumps for Mixing, Blending, Recirculating, Fixed and Mobile Transfer**

**Up to 468 GPM • Up to 125 PSI**

These pumps operate smoothly and with equal efficiency in either direction of rotation. They effectively handle heavy, viscous materials such as asphalt, molasses, roofing compounds, and printing inks, as well as fuel oils, gasolines, and similar thin liquids.

Pumps can be supplied in several materials of construction, with or without built-in relief valves. Pumps can be assembled either hi-drive or low-drive, and are available with conventional packed box or lapped-face mechanical shaft seal. They can be direct driven or driven through a built-in gear reduction with a wide range of ratios. These pumps operate equally well regardless of the mounting configuration or the direction of rotation.

## Features

**Quiet-Running Helical Gears**

- Heat treated cast-iron pumping gears are accurately machined for quiet, efficient operation and long life.
- The pumping gears are keyed to their shafts with a sliding fit and are easily replaced.
- Accurate machining ensures proper meshing, and reduces friction and vibration.

**Long-Lasting Bearing Surfaces**

- Bearings are special wear-resistant, high-lead bronze. Iron and carbon bearings are available.
- Four heavy duty sleeve bearings give positive support to pumping gears and ensure long, efficient service.
- Bearing grooves allow circulation of the liquid being pumped for lubrication & control of bearing temperature.
- Outboard drive shaft bearing supports external radial loads and absorbs thrust loads.

**Precision-Ground Shafts**

- The steel shafts are induction hardened in the bearing and sealing areas and are precision ground to exacting standards for maximum life.
- Hardened stainless steel shafts available.

**Rugged Housing**

- Standard castings are cast iron.
- Precise manufacturing tolerances provide minimum clearances for maximum pumping efficiency.
- Large, hardened steel dowel pins ensure positive alignment between the faceplate/casing and backplate.

**DID YOU KNOW?**

That All Pumps can couple these pumps to almost any motor or engine type?

## 3600 HEAVY DUTY SERIES

## Key Components

## BEARINGS

Four heavy duty sleeve bearings give positive support to pumping gears and ensure long, efficient service. A special wear-resistant, high-lead bronze bearing is standard on 3600 Series Pumps. For thin non-abrasive liquids we offer optional carbon bearings, as well as iron bearings for abrasive liquids. The bearings are grooved to allow circulation of the liquid being pumped for lubrication & control of bearing temperature.

## GEARS

The helical pumping gears are machined from heat treated cast iron because of its excellent wear resistance.

For chemical pumping applications, the standard gears can be replaced with stainless steel or bronze. An optional Delrin® idler gear can be used for quieter operation when running thin liquids.

## SHAFTS

Standard steel shafts are induction hardened in the bearing and sealing areas, and are precision ground to exacting standards for maximum life. Hardened stainless steel shafts are also available upon request.

## HOUSING

Our rugged cast-iron housings are manufactured to precise tolerances, providing minimum clearances for maximum pumping efficiency. Large, hardened steel dowel pins ensure positive alignment between the faceplate, case, and backplate.

## GASKETS

3600 Series Pumps come standard with fibre gaskets that are used up to 212°F/100°C. For higher temperature applications (up to 450°F/232°C) we offer other optional gasket materials.

## Relief Valves & Jacketing

### RELIEF VALVE

In the event of overpressure situations, our adjustable relief valve protects personnel and equipment by returning liquids to the suction side of the pump. Various spring sizes can be specified to handle a wide range of operating conditions.

Roper Pump's inverted poppet relief valve is designed without close fitting guides that can clog and cause excessive pressures when the valve does not open freely. The valve will provide protection in only one direction of rotation. However it can be positioned easily to either side of the pump to accommodate flow direction.

### BI-DIRECTIONAL RELIEF VALVE\*

Roper Pump's integral bi-directional pressure relief valve offers reliable protection of your personnel and equipment, regardless of which direction you are pumping. You can reverse flow without disabling pressure relief operability, or compromising operator safety. Based on our rugged and time proven standard relief valves, this offers you a lighter weight, lower cost alternative compared to externally plumbed systems.

\*Available on 11, 17 and 22 sizes

### JACKETING\*\*

Whether the fluid to be pumped must be heated, cooled, or maintained at a specific temperature, a jacketed Roper pump will handle difficult-to-pump materials such as Bunker C, molasses, asphalt mixes, refined sugars, creosote, printing ink, and other viscous fluids which require temperature control for satisfactory handling.

Roper Pump jacketed pumps provide efficient heat transfer to the packing, seal relief valve, bearing areas, and endplates of the pump. The jackets are suitable for use with steam, hot or cold water, heat transfer oil, etc., as heating or cooling mediums.

Jacketing is available on the faceplate only, backplate only, or on both.

\*\*Jacketing is not available on 32, 43 and 48 sizes

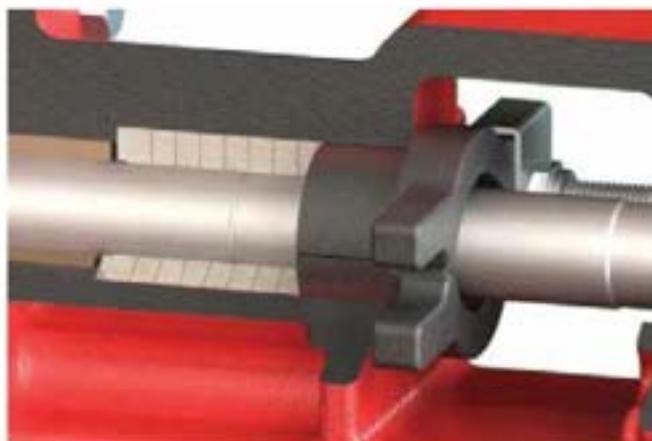

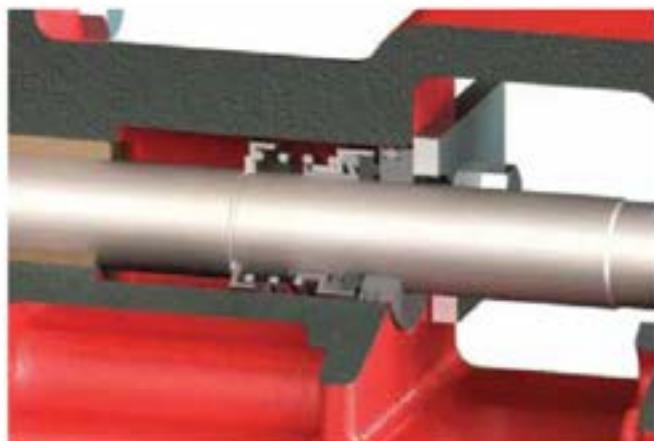

## Pump Seals

### MECHANICAL SEAL

Mechanical seals are for those applications where product leakage is unacceptable. Under proper conditions the mechanical seal has a longer service life than the packed box and does not require adjustment. The standard mechanical seal is an elastomeric bellows type seal. A PTFE wedge seal is also available.

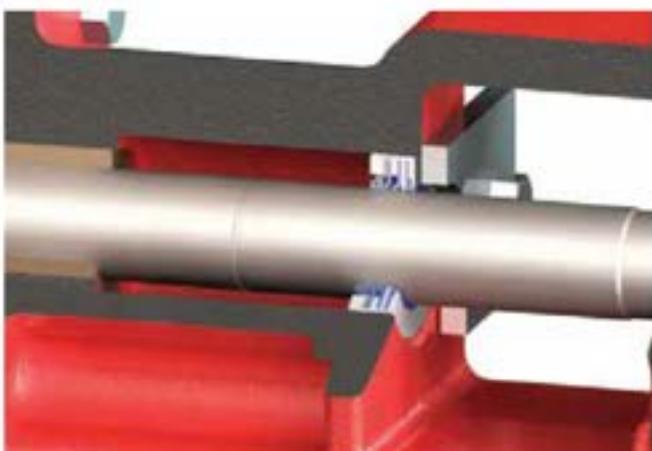

### PACKED BOX

Our standard packing is suited for general purpose applications, and is easily replaced with split ring packing. For optimum performance, the gland should be adjusted to allow slight. Standard packing is graphite, with several optional packing materials available for applications involving high temperatures or mildly corrosive liquids, or those requiring compatibility with food products.

### TRIPLE LIP SEAL

Offering the same high degree of sealing reliability as a mechanical seal, triple lip seals are better suited for viscous products that tend to set up while the pump is idle, such as resins, glues and paints. The lips create an effective barrier to product leakage, and will move freely upon resumption of pumping a thickening substance. In cases where extreme circumstances can cause catastrophic failure of mechanical seals, the resilient nature of the triple lip seal makes it relatively immune to sudden failure.

## Features

- Designed to operate at standard motor speeds
- Bi-directional rotation

### Quiet-Running Helical Gears

Accurate machining ensures:

- Proper meshing
- Reduced friction and vibration
- Quiet, efficient operation
- Long life

## A Series General Purpose Pumps

**General Purpose Pumps for Pressure Lubrication, Hydraulic Service, Fuel Supply and General Transfer**

**Up to 59 GPM • Up to 300 PSI**

Roper A Series pumps are adaptable to a wide range of applications pumping clean fluids, such as pressure lubrication, hydraulic service, fuel supply or general liquid transfer.

These pumps are designed to operate at standard motor speeds, with provisions for flange or foot mounting. The internal bearings are lubricated by the fluid being pumped. With only two moving parts, the pumps run quietly.

They are manufactured and assembled with close tolerances, and regularly tested to ensure dependable performance. Factory assembled for clockwise rotation (facing the pump drive shaft end), most may be reassembled for operation with equal efficiency in a counter-clockwise rotation.

### Long-Lasting Bearing Surfaces

- Bearings are special wear-resistant, high-lead bronze. (Iron and carbon bearings are available.)
- Four heavy duty sleeve bearings give positive support to pumping gears and ensure long, efficient service.

### Precise, Rugged, Maintenance-Friendly Design

- All castings are cast iron.
- Precise manufacturing tolerances provide minimum clearances for maximum pumping efficiency.
- Large, hardened steel dowel pins ensure positive alignment between the faceplate, case, and backplate.

## Size 54 (foot mounted)

## Size 75 (foot mounted)

**OBERDORFER**

## General Description

Pump housings and gears are made of top quality bronze, shafts are 303 stainless steel. Bearings are designed of high performance carbon-graphite material selected for wear resistance and long service life.

Gear pumps are positive displacement pumps. Each shaft revolution displaces a definite amount of liquid relatively unaffected by the back pressure in the discharge line. Shaft speed and flow are directly proportional.

Recommended pressure limits are 7 bar for water and non-lubricants, 10 bar for oil and other lubricants. The maximum shaft speed is 1750 RPM.

## Drive Arrangement

Close coupled pumps are mounted directly to the electric motor by means of suitable adapter casting. The pump drive shaft is connected to the motor shaft by a flexible coupling.

Depending on pump size and power requirements, IEC motor frame sizes from 71 to 112m are used as outlined.

## Shaft Seals

Close coupled gear pumps are available with lip seals or mechanical seals in buna or viton.

## Liquids and Temperature

These pumps are suitable for all liquids that are compatible with bronze. Most common liquids are water, oil, and mild chemicals in the pH range of 4 to 11. Viscous liquids require reduced shaft speeds of 960 RPM or lower. (Consult factory.)

Liquids containing solids, abrasives, powders, or paint pigments are definitely not recommended for gear pumps. If abrasives are unavoidable, use a very low shaft speed.

The recommended liquid temperature range is from 0°–60°C for best pump life. If more extreme temperature conditions exist, factory should be consulted. Freezing of water-filled pumps can cause damage and must be avoided. Oils at low temperatures are very viscous requiring low speed and extra power.

## Warranty

Oberdorfer gear pumps are covered by a limited warranty against defective workmanship and materials for a period of one year from the date of purchase. For the purpose of warranty claim, the pump must be returned prepaid to the factory for a warranty inspection with prior notification and approval of such return.

Short service life of a pump caused by pumping of abrasive materials or pump damage caused by aggressive chemicals, misaligned motor shafts, excessive pressure, or other installation-related problems does not constitute a warranty claim.

## Suction Lift

As a general rule, the suction lift should be kept at an absolute minimum by placing the pump as close to the liquid source as possible. A gear pump in new condition can lift 20 feet of water in the suction line. A foot valve (preferably with built-in strainer) is recommended at the beginning of the suction line. For a first startup, the pump should be primed to avoid dry running. Minimum size of the suction pipe is the size of the pump inlet port. For longer suction lines (over 3 feet) or for viscous liquids, the pipe should be at least one size or two sizes larger than the pump inlet port. If the discharge line contains any throttling devices such as a shut-off valve, a spray nozzle or other restrictive device, it is necessary to have a relief valve in the system, which returns the liquid to the suction side or to the tank. The relief valve is also available as part of the pump itself (R-model pumps). However, built-in relief valves are only good for intermittent service. If used continuously, the pump will overheat. A built-in relief valve is strictly a safety device against overpressure. It will not work successfully as a pressure or flow control device. For this purpose a separate relief valve in the pressure line must be used. Unless otherwise specified, the pump motor unit is supplied by the factory for shaft rotation counterclockwise from shaft end. Reversing motor will reverse "in" and "out" ports and also requires changing relief valve location. The relief valve is always on the inlet side of this pump series. The factory pressure setting is 50 PSIG. To increase pressure, turn the relief valve adjusting screw in a clockwise direction.

## Relief Valve (R-Model Pumps)

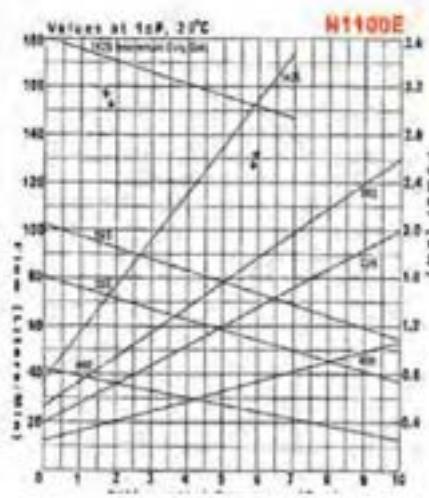

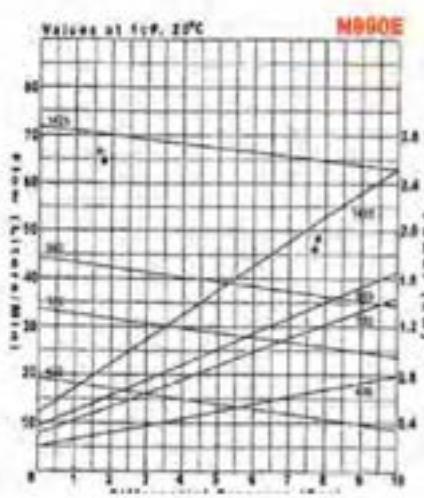

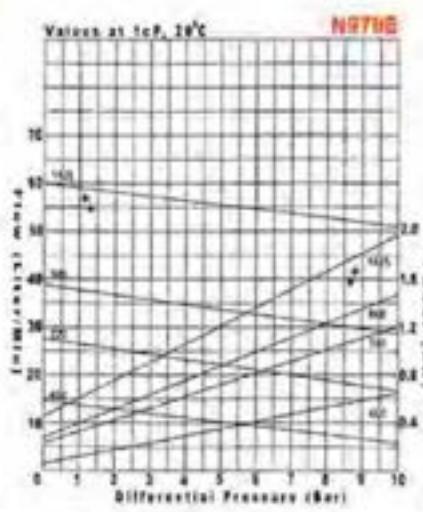

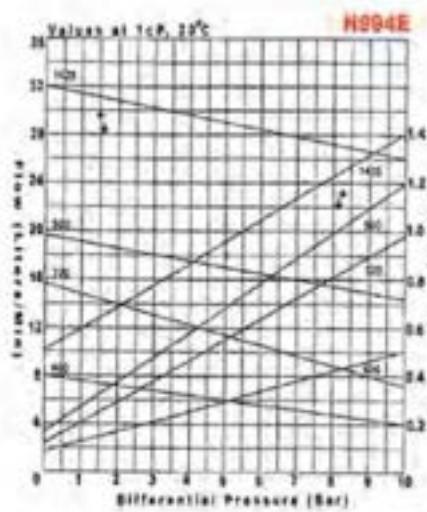

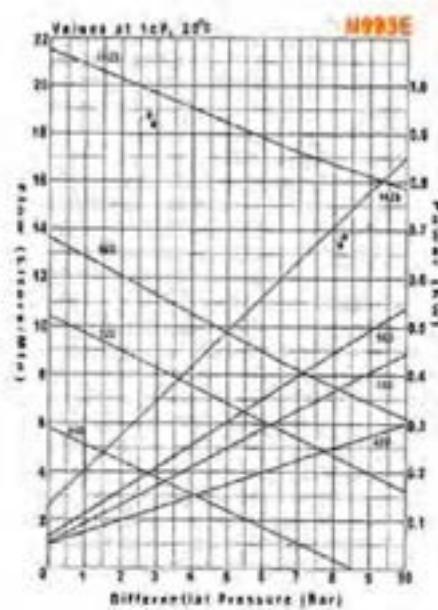

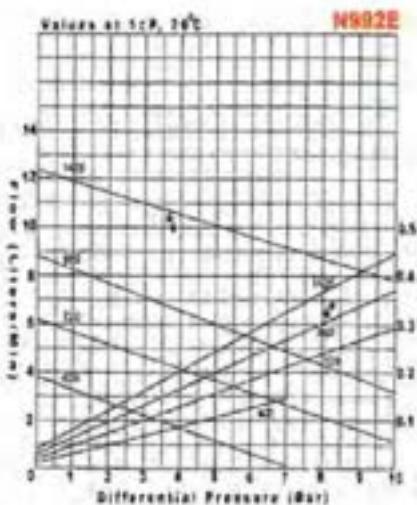

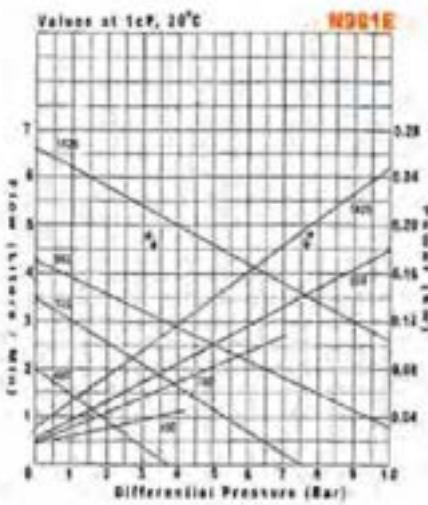

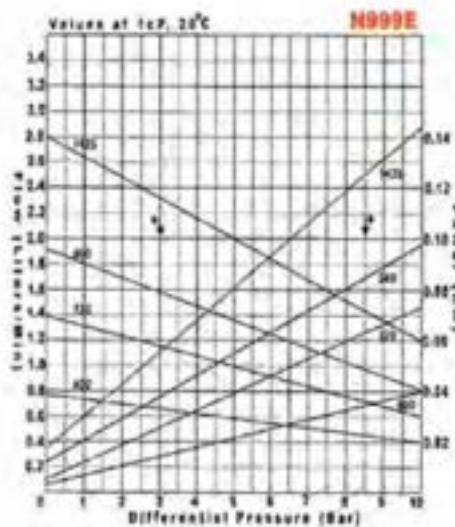

If the discharge line contains any throttling devices such as a shut-off valve, a spray nozzle or other restrictive device, it's necessary to have a relief valve in the system which returns the liquid to the suction side or to the tank. The relief valve is also available as part of the pump itself (R-model pumps.) However, built-in relief valves are only good for intermittent services. If used continuously, pump will overheat. A built-in relief valve is strictly a safety device against overpressure. It will not work successfully as a pressure or flow control device. For this purpose a separate relief valve in the pressure line must be used.

## Pump Maintenance and Repair

Oberdorfer gear pumps are essentially maintenance-free. If the pump is to be shut down for an extended period of time, it should be flushed thoroughly and filled with lubricating oil. As a general rule, it is seldom economical to repair a worn out gear pump. However, if the gear chamber inside the pump body is still in good condition, the replacement of all interior parts by use of a repair kit may restore up to 80% of the original pump performance.

	100L/112M	12003	----

TO IEC 72 STANDARD B3/B14  
(RIGID BASE AND "C" FACE)

**OBERDORFER**

## Features

### **BI-DIRECTIONAL OPERATION**

- For applications requiring reversing flow

### **BODY/COVER STATIC O-RINGS**

- Teflon® encapsulating silicone for sealing with a memory

### **COMBINED BEARING & WEARPLATE**

- Full size bearings match the gear diameter and eliminate the need for separate wear plates
- Gear trimming for desired flow rates
- Made of carbon-graphite, Teflon® or Rulon®

### **SEAL HOUSINGS**

- Ported for flush, drain, barrier fluid and lantern packing lubrication
- Access to seals without removal of cover

### **HELICAL GEARS**

- Noise reduction up to 10 db

### **UPPER DRIVE STANDARD**

- Lends itself to in-line pump seal maintenance without leakage of trapped chemicals
- Easily converted to a lower drive configuration

### **OPTIONAL BEARING FLUSH PORTS**

- To extend bearing life when pumping non-lubricating fluids or fluids with a small degree of fine solids

### **INTERFACING TO WORLD STANDARDS**

- NPT & BSPT porting
- Metric pump hardware
- Close-coupled adapters for NEMA and IEC standard motor frame sizes

### **DYNAMIC SEAL OPTIONS INCLUDE**

- Single or double mechanical wedge & bellows styles
- Standard compression packing
- Lantern Ring compression packing
- Lip seals

### **EXTENDED LIFE**

- Gear & bearing combinations of metallic and non-metallic wear surfaces
- Slotted bearings to lubricate shaft and gear surfaces
- Hydraulic porting to balance axial thrust and reduce wear

### **METALLIC & NON-METALLIC**

- Wide range of capabilities
- Effective weight and cost selection

## Construction

### BODY

Ryton®, Polyphenylene Sulfide PPS, an engineered, reinforced plastic, offering a wide range of chemical compatibility, physical stability, and high temperature resistance (to 200° F). Type 316, An all purpose austenitic stainless, excellent corrosion resistance; premium choice of all 300 series alloys. Alloy C, Most used of exotic high/nickel alloys. Superior corrosion resistance for severe alkaline and acidic pumping applications.

### GEARS

Precision machined metallic gears of 316SS, W88 stainless, and Alloy C. Also available in glass reinforced Teflon®, Ryton® and carbon reinforced PEEK.

### SHAFTS

Shafts are 316 stainless steel or Alloy C.

### SEALS

Single and/or double mechanical seals are offered in elastomer bellows and Teflon® wedge designs. Bellows design available with Viton® or EPDM formed elastomer shaft seal. Wedge designs available with Teflon® wedge shaft seal and perfluoroelastomer stationary seat o-rings. Packing materials: Teflon®, Grafoil® and Teflon®/Graphite.

### BEARINGS

Full gear diameter carbon sleeve bearings for maximum chemical resistance and high load capacity. Teflon® or Rulon® plastic bearings available for product purity.

### BODY/COVER O-RINGS

Teflon® encapsulating, silicone o-rings provide elastic memory to assure an effective long lasting seal. Avoiding the re-torquing required of pumps using pure TFE.

- Neodymium or Samarium cobalt magnets
- Close Coupled Adapters for NEMA and IEC standard motor frame sizes
- 316 Stainless Steel, Ryton and Alloy C containment cans
- 1/2 to 30 GPM

## JABSCO 2400 SERIES

### 24 Series Hygienic Positive Displacement Pump

The 24 Series range of positive displacement rotary lobe pumps is a proven design spanning over 20 years. With thousands of pumps in use around the world users agree that it is one of the best designed hygienic pumps on the market today. The 316 Stainless Steel 24 Series pump range incorporates improved technology in hygienic pump design and manufacturing techniques, yet utilises the traditional tri-lobe rotor concept which is so well accepted by the world's leading suppliers of Food, Personal Care and Chemical products.

### Design and features

- **Adaptability** - This is the key design concept. The pump utilises 'bolt on' features which allow quick and easy interchange of parts to enable exact specification of the pump to suit any application.....from stock!
- **Rugged Design** - The bearing frame design utilises large shaft diameters mounted in high specification taper roller bearings, fitted into rigid pillars which form an integral part of the high grade alloy housing. These ensure maximum shaft stiffness in order to avoid premature pump failure due to overpressure or other abuse.
- **Low Maintenance** - The shaft, bearing and gear assemblies are fully immersed in an oil bath to give maximum life even at extremes of operating conditions. The timing gears are easily accessible at the rear of the pump in the unlikely event that re-timing should become necessary. Rotors are all fully interchangeable avoiding the need to re-time which is a problem associated with so many other rotary lobe and circumferential piston pumps.
- **Improved Hygienic Technology** - Fully swept pump chamber together with sealed rotor spline, accessible seals, and approved sealing components ensure that the pump meets the stringent requirements of major international customers.

### Options

**Seals** - Single mechanical seals are of hygienic design. Materials include carbon, stainless steel, tungsten carbide and silicon carbide.

Low pressure flushed seals utilise the same single mechanical seal with an additional housing. A low pressure flush liquid washes away crystallising products or liquids which 'skin over'.

Double mechanical seals utilise all the components from single seals for hazardous, toxic, highly abrasive or sterile products.

Gland packing - a cost effective general purpose seal for non-hazardous liquids. Used on either a stainless steel or hard chrome plated anti-wear sleeve.

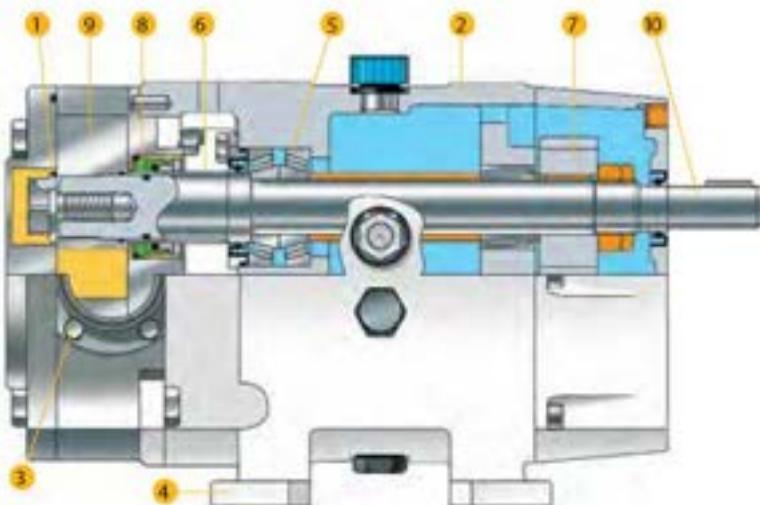

O-Ring seals - another low cost seal option used primarily for self lubricating products such as dairy products.

- **Certification** - 3A Variants with Nitrile or EPDM elastomers and port options - Tri-clamp, IDF, 3A, DIN11851.
- **Rotors** - Tri-lobe rotors in stainless steel handle 90% of all applications. The traditional rotor shape gives an excellent combination of efficiency, solids handling, low and high viscous product capability. Bi-lobe rotor in stainless steel for exceptional handling of delicate, soft solids such as fruit pieces and vegetables. Rubber covered tri-lobe rotor to cope with small hard solids such as small bone fragments or ice crystals.
- **Connections** - All US and European standards including DIN, SMS, RJT, IDF, Tri-Clamp & BSP. Most pumps available with 2 different sizes, all fully interchangeable.
- **Elastomers** - Nitrile, Viton, EPDM, PTFE or Kalrez product contact joints are available.
- **Other options** - Pump head temperature control jackets. Integral pressure relief valve. Enlarged suction ports for highly viscous product.

## CONSTRUCTION DETAILS

- Sealed rotor splines ensure improved cleanability.
- Rugged, high grade alloy bearing frame for low weight and high strength.
- Detachable ports for maximum flexibility in connection type and size.
- Removable feet allow quick change for pump mounting in the ideal orientation.
- High specification tapered roller bearings give over one million hours life on a typical duty.
- Shaft sleeves under seals ensure minimised maintenance costs.
- Precision cut helical timing gears for reduced noise and ease of maintenance.
- Wide variety of interchangeable seal types to suit many applications.
- Fully interchangeable rotor options can be fitted without the need of re-timing thus reducing downtime.
- Heavy duty shafts for high pressure capability and minimum deflection.

**JABSCO HYLINE SERIES**
**Hy-Line Super Hygienic  
Positive Displacement Pump**

Jabsco's latest rotary positive displacement pump incorporates the very latest in hygienic design concepts in order to fulfil the ever increasing customer demands for improved cleanability, hygiene and sterilisability. This 316 Stainless Steel design uses a bi-wing rotor, which encompasses the very best features of tri-lobe rotor pumps and circumferential piston pumps. The pump is built upon Jabsco's 40 year experience of producing and supplying their Flexible Impeller and 24 Series rotary lobe pumps to the world's most demanding markets.

**Design and features**

- Most Stringent Hygienic Standards - Flush rotor fixing screws are sealed to prevent product ingress. Contoured rotor case internals for full drainability during SIP and shaft seals set up front where the pumping action is! Fully conforming to 3A 02-10 Hygienic Standards and utilising materials which meet FDA requirements. Versions are available that have been tested and approved to the EHEDG (European Hygienic Equipment Design Group), CIP and SIP protocols and USDA, 3A certification.
- Low Maintenance Costs - Front loaded single shaft seals are fully accessible from the front of the pump without disturbing the process pipework. Simple bearing assemblies easily pre-set using automotive technology. Bi-wing rotors require no timing adjustments. Even the pump casing is removable, a feature not normally associated with other bi-wing rotor pumps.
- High Volumetric Efficiency - The bi-wing rotors incorporate the low viscosity efficiency associated with circumferential piston pumps with the viscous product handling capability of tri-, quad- and bi-lobe rotor pumps..... at an affordable price!
- Rugged Design - Hy-Line design utilises extremely large shaft diameters mounted in high specification taper roller bearings, fitted into an extremely rigid central pillar made from a high grade alloy. This is all enclosed in an oil filled housing made from the same alloy. These, together with wide tipped rotor wings, which adds another dimension to security, avoid premature pump failure due to overpressure or other abuse.

**Options**

- Seals - Front loaded single mechanical face type seals of hygienic design. Materials include carbon, stainless steel and silicon carbide. Low pressure flushed seals utilise the same single mechanical seal with an additional housing. A low pressure flush liquid washes away crystallising products or liquids which 'skin over'. Double mechanical seals utilising all the components from single seals. Used for hazardous, toxic, highly abrasive or sterile products. Front loaded single O-Ring seals - a low cost seal option used primarily for self lubricating products and products which contain little or no abrasives. Front loaded double O-Ring seals - suitable for pressurised grease or flushing with a suitable liquid to enable low cost sealing of high sugar confectionery and bakery products. Multiple PTFE lip seal - complete with controlled release food grade grease injection system, the ideal sealing system for chocolate and other products sensitive to water flush.
- Certification - 3.1B Material Certification package. 3A Variants with Nitrile or EPDM elastomers and port options - Tri-clamp, IDF, 3A, DIN11851
- Connections - All US and European standards including DIN, SMS, RJT, IDF, Tri-Clamp & BSP. Most pumps available with 2 different sizes, all fully interchangeable. (Not on 3 & 7 size)
- Elastomers - Nitrile, Viton, EPDM and PTFE product contact joints available in compounds conforming to 3A Sanitary Standard 18-03 and FDA title 21 section 177.2600.
- Other options - Pump Head temperature control jackets. Integral pressure relief valve. Enlarged suction port for viscous products. All stainless steel bearing pedestal and cover. Low carbon 316L pump head. Tanker pump version for direct hydraulic drive.

## CONSTRUCTION DETAILS

- Flush fitting, sealed rotor retaining screws avoid build up of stagnant product as no end cover recesses are required and no product can get into the rotor drive.
- Front mounted shaft seals for easy replacement and full accessibility of CIP liquids.
- Rugged, high grade alloy bearing pedestal and housing for low weight and high strength, completely encased in epoxy coating.
- Detachable ports for maximum flexibility in connection type and size. (Not on 3 & 7 size).
- Removable feet allow quick change for pump mounting in the ideal orientation. (Not on 3 & 7 size).
- High specification taper roller bearings give over one million hours life on a typical duty.
- Precision cut spur gears for high load capability and ease of maintenance.
- Fully interchangeable bi-wing rotors can be fitted without the need to re-time thus reducing downtime and allows pump to cope with a higher level of abuse.
- Heavy duty shafts for high pressure capability.

## JABSCO **ULTIMA SERIES**

### Ultima/55 SERIES Ultra Hygienic Positive Displacement Pump

The ultimate hygienic rotary positive displacement pump designed without compromise to fulfil even the most critical customer demands in cleanability, sterilisation and bacterial tightness. This 316L Stainless Steel design uses bi-wing or 5-lobe rotor designs specifically utilised to achieve the very lowest shear rate and product degradation characteristics. The Ultima pump is an extension of Jabsco's world renowned 55 series pump which was the first pump of its kind and a virtual industry standard in the Bio-pharm arena.

### Design and features

- Ultimate Hygienic Standards - Tested and approved to the EHEDG (European Hygienic Equipment Design Group), CIP, SIP and Bacterial Tightness protocols. Full conformance to 3A Sanitary Standards 18-03 and 02-10 and utilising materials which meet the requirements of the FDA title 21, section 177.1550.
- Cleaner by Design - External rotor retention together with gasket type joints in place of O-rings reduce the number of potential product entrapment areas. In addition to this, the shaft seals are pulled forward fully in the product zone, all of which adds up to the ultimate in cleanability.....every time!
- Low Product Shearing - The bi-wing and 5 lobe rotor designs ensure high volumetric efficiency on low viscosity products resulting in low shear rates and low product damage.
- Rugged Design - This pump design utilises extremely large shaft diameters mounted in high specification taper roller bearings. These give maximum shaft stiffness to ensure no galling thus maintaining the pump's CIP and SIP capabilities.

### Options

- Seals - Front loaded single mechanical face type seals of hygienic design. Materials include carbon and silicon carbide. Low pressure flushed seals utilise the same single mechanical seal with an additional housing. A low pressure flush liquid washes away crystallising products or liquids which 'skin over'. Double mechanical seals utilising all the components from single seals. Used for hazardous, toxic, highly abrasive or sterile products.
- Certification - 3.1B Material Certification package. 3A Variants with Nitrile or EPDM elastomers and port options - Tri-clamp, IDF, 3A, DIN11851
- Connections - US and European standards including Tri-Clamp. All pumps available with 2 different sizes.
- Elastomers - USP Class VI, EPDM, Viton and PTFE product contact joints all in compounds conforming to the FDA CFR title 21 section 177.1550.
- Other options - Aseptic barrier end cover joints to maintain sterility of product during long cycle times. Electropolish or high polish internal surfaces to 0.5µm Ra (20 micro-inc Ra) for minimised cell damage and maximised cleanability.

**CONSTRUCTION DETAILS**

- 1 External rotor retainers prevent build up of stagnant product, by removing the need for end cover recesses and O-ring crevices entirely.
- 2 Gasket type joints eliminate the uncertainty of O-rings in terms of cleanability.
- 3 Front mounted shaft seals allow for easy replacement and full accessibility of CIP liquids.
- 4 Rugged, stainless steel bearing pedestal and housing allow for maximum hygiene (epoxy coated cast iron with stainless steel option on 55 series).
- 5 Removable feet allow quick change for pump mounting in the ideal orientation.
- 6 High specification taper roller bearings give over one million hours life on a typical duty.
- 7 Precision cut gears yield high load capability and ease of maintenance or replacement.
- 8 Fully interchangeable bi-wing rotors can be fitted without the need to re-time thus reducing downtime and allows pump to cope with a higher level of abuse and larger solids.
- 9 Heavy duty shafts for maximum rigidity and minimum galling due to low deflections.
- 10 Low carbon 316L pump head with welded ports for reduced carbide precipitation, increased corrosion resistance and minimal carbon 'pull-out'.

## **NETZSCH** TORNADO ROTARY LOBE PUMPS

For more than a decade we have been supplying the classic design NETZSCH TORNADO® T1 rotary lobe pumps.

Their extensive use in applications in the Environmental and Energy, Chemical, Pulp and Paper and Oil and Gas sectors for flow rates up to 1000m<sup>3</sup>/h demonstrate their high performance. Pump size and specification are precisely tailored to suit the characteristics of the pumped media and the operating requirements. Three series with 12 models available provide for flow rates up 1,000m<sup>3</sup>/hr at discharge pressures up to 6 bar for both intermittent and continuous operation. For higher discharge pressures customised solutions are available.

### Benefits

- GSS1 technology for long term reliability
- Maintenance without the need to disconnect the inlet and outlet pipework
- Easy and quick access to the lobes and shaft seals
- Tolerance of running dry
- Short delivery times – all manufacturing 'in-house', large stock of components

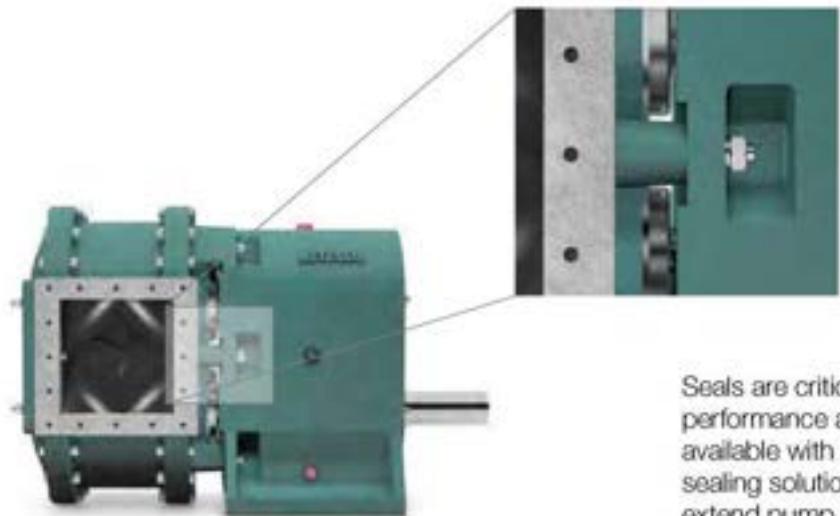

TORNADO ROTARY LOBE PUMPS **NETZSCH**

## NETZSCH GSS technology (GSS = Gearbox Security System) – Long-term reliability

The classic TORNADO® T1 rotary lobe pump is of optimal design for each application based on the knowledge and experience gained by Netzscher over many decades of development, design, manufacture and supply of positive displacement pumps into all industries. This experience has founded the development of the NETZSCH GSS technology (Gearbox Security System), which significantly extends operational reliability by physically separating the pump chamber and gearbox.

### Benefits

- Extended operational reliability
- No ingress of the pumped media into the pump gearbox in the event of a product leaking
- No ingress of pump gearbox oil into the pump chamber
- Easy access to the shaft seal flushing connections

Seals are critical to satisfactory pump performance and the TORNADO® T1 is available with a range of highly engineered sealing solutions designed and selected to extend pump operating life.

Classic single  
acting seal

Single for buffer or quench  
for industrial applications

Special seal for  
demanding applications

# NETZSCH TORNADO ROTARY LOBE PUMPS

The design of the classic TORNADO® T1

#### Front Cover

Rotors, cover seal and product seals can be accessed for inspection, service or replacement by simply removing the front cover. Disassembly of the inlet and outlet pipework and pump housing is not necessary.

#### Wear Plates

Abrasion and chemically resistant, replaceable wear plates are fitted both sides of the rotors.

#### Rotors

Straight sided or helical rotors are selected to suit individual application requirements. Rotors are available as bi-lobe, tri-lobe or four-lobe and wide a range of materials are available.

#### Housing Crescents

Modular construction allows for the crescents to be simply replaced should wear occur. Pump life time can be further extended with the option of replaceable crescent liners.

#### Product Seals

Wide range of product seals and materials are available, which are selected to suit individual application requirements. Seal arrangements include easy access connections for seal quench or flush.

#### Pump Gear Box

The patented gear box design includes NETZSCH GSS-Technology separating the pump head from the gear box which eliminates cross contamination between the pump media and gear box lubricant.

Pump inlet and outlet adaptors for connection to installation pipework are available in various designs.

Straight adaptor

S-shaped adaptor

Elbow (90° upwards) adaptor

#### Connection options

Adaptors designed to suit specific installations available on request

# TORNADO ROTARY LOBE PUMPS

NETZSCH

The rotors – low-pulsation, smooth pumping of all media

## Rotors in different geometries and materials

2lobe straight

3lobe helical

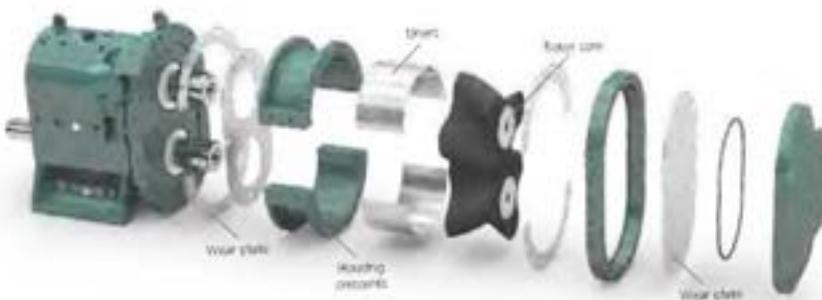

4lobe helical

The rotor geometry and material are selected for the characteristics of the pumped media. Geometries are available for products which are viscous, abrasive or contain solids. Materials tailored to the media characteristics increase the durability of the rotors and extend service life.

## Range of pump head wetted materials broadens application coverage

For handling chemically corrosive or otherwise aggressive media the TORNADO® T1 pump housing, wear plates, liners and rotor cores are available in suitably resistant materials.

## NETZSCH TORNADO®

self-priming, valveless, positive displacement pumps can be optimally customised to meet specific process and application requirements.

They can be used for almost any media on intermittent, continuous or dosing applications.

TORNADO® advantages are small space requirements due to their compact design, high performance and maximised operational reliability, and the physical separation between the pump head and bearing housing. TORNADO® pumps are particularly service and maintenance friendly; all parts that come into contact with the media are directly accessible without dismantling the pipework or disconnecting the drive.

## Functioning principle

The TORNADO® rotary lobe pump is a positive displacement pump. The pumping action is generated by the contrarotation of two rotors within the pump chamber which are synchronised externally. The media enters the pump chamber through the inlet port and is carried around the chamber by the rotors to the outlet port where it is discharged.

TORNADO ROTARY LOBE PUMPS **NETZSCH**

## Features

TORNADO® T2 Rubber-Metal Pump

## Stability

**The best maintenance is no maintenance**

Plastic deformation and heat generation is reduced by maintaining a uniform elastomeric wall thickness within the pump chamber. Material sections, bearing selection and seal positioning combine to minimise the adverse effects on dimensional changes to pump head geometry due to temperature changes.

The design and geometry of the rotors ensures a high level of durability. With the rotor fixing and drive outside of the pump chamber the rotors can have a completely flat continuous front and back face with no dead areas which eliminates the possibility of fibrous material becoming trapped and compacted. The mechanical seal design and seal face position eliminates dead areas and allows constant circulation of the media around the

faces which ensures that the risk of media entrapment and compaction is minimised.

The TORNADO® T2 all metal pumps can be manufactured from metals offering higher levels of cleanliness, corrosion or abrasion resistance and can therefore be applied to applications demanding the characteristics of these materials, especially in the low sanitary hygienic or chemical market sectors.

## Cost-effectiveness

**The first Rotary Lobe Pump with an elastomer liner reduces life cycle costs (LCC)**

For the first time in a rotary lobe pump an elastomer liner is used for all media wetted surfaces of the pump chamber, which is both easy to replace in the event of servicing and significantly less expensive than replacing wear plates and housing parts.

By the correct and most appropriate choice of mating materials and the optimum sizing of the pump head interface geometry, especially with the rubber-metal pump, friction resulting in heat can be minimised. This results in both an energy saving and a longer life for consumable spare parts.

## NETZSCH TORNADO INFORMATION

### Functioning principle

The drive motor transmits power via a double-sided tooth belt which both drives and synchronises the pump shafts. If required, the drive can be used in conjunction with a frequency converter to achieve a specific flowrate or range of flowrates.

Single tooth belt drive

### Stability

#### A new application of tried and tested drive technology

An accident causing a complete write-off is inconceivable with this pump. We have replaced the timing gears which have to operate in a managed, maintained environment, with a robust and durable synchronising tooth belt drive. This gives smoothness of operation, load dampening, reduced energy loss and eliminates the need for oil. No more oil filling, draining, changing, leakages, spillage or disposal reduces down time and increases operation time and provides a cleaner, safer working environment.

The simple design of the timing tooth belt drive system reduces down-time for service; the result is that the pump is back on stream in less time, and with less components the pump is less prone to problems.

### Environmental awareness

#### TORNADO® T2 – the environment friendly pump

By incorporating a tooth belt drive the pump does not use any oil. There is no chance of any environmental pollution due to spillage or leakage. Our customers benefit from low noise levels and reduced heat in the working area around the pump which corresponds with less energy loss.

### Versatile combination – flexible installation – consistent pumping capacity

Both single and double tooth belt drive arrangements are available providing a wide range of speed reduction ratios.

If required a shaft extension for direct in line coupling to electric motor or diesel engine drive is available.

Power take off (PTO) shaft extension for drive from truck or tractor; twin shaft extensions available where reversible operation is required.

## From GSS<sup>1</sup> to BSS<sup>2</sup>

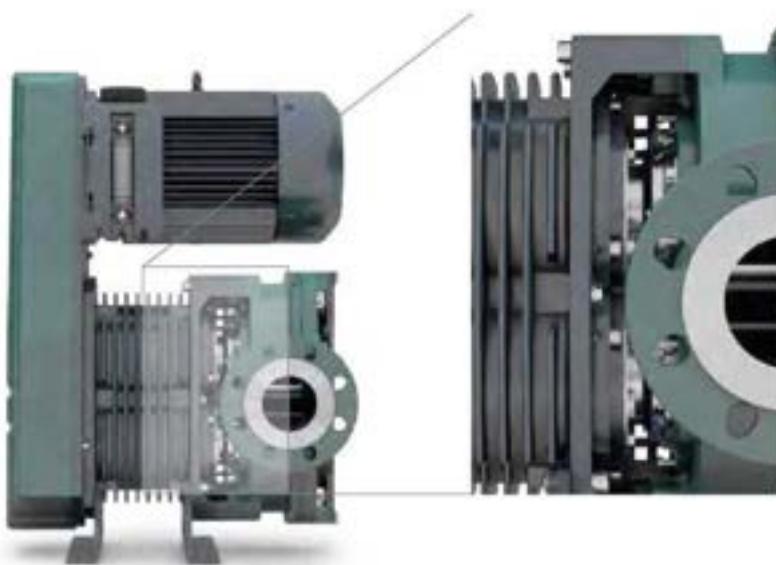

- No ingress of the media into the bearing housing in the event of seal failure
- Easy access to seal buffer/quench and barrier/flush connections
- Visual indicator of seal performance

<sup>1</sup> GSS = Gearbox Security System

<sup>2</sup> BSS = Bearing Security System

### Drive options

A range of drive options are available to suit specific application and process requirements.

Design and position of mechanical seal: cartridge unit integral with rotor

- Uninterrupted and direct flow of media to and around seal faces
- Self draining, no dead areas, no wear of shafts the seal is mounted on an integrated rotor sleeve
- Easy assembly and disassembly

## Mechanical seal selection for TORNADO® T2

A pump is only as reliable as its seals. Therefore a range of seals and seal materials are available for the new TORNADO® T2. All seals are of a cartridge design and fit into a common housing allowing for seal upgrades without modification. The seals are positioned with the seal faces directly in the flowpath through the pump chamber.

**Mechanical seal typically used for agricultural and environmental applications**

Single

**Mechanical seal typically used for industrial and general process applications**

Single

Single for buffer or quench

Double for barrier or flush

## NETZSCH TORNADO INFORMATION

Feed pump for substrate in a biogas plant.  
Flowrate up to 40 m<sup>3</sup>/h at pressures up to 2 bar.

The TORNADO® T1 in use in a paper mill. Kaolin tankers are unloaded at 75 m<sup>3</sup>/h against a pressure of up to 4 bar.

Used in a wastewater treatment plant, the TORNADO® T2 pumps sludge with 2% solid content at a capacity up to 18 m<sup>3</sup>/h against a pressure up to 2 bar.

### Broad application spectrum

TORNADO® rotary lobe pumps can be used for media that has the following characteristics:

- Abrasive, corrosive and fibrous
- Containing solids (max. particle size up to 70 mm)
- Low to high viscosity
- Shear sensitive
- Non-lubricating and lubricating

### Wide capacity and pressure range

- Flowrates up to 1,000 m<sup>3</sup>/h
- Pressures up to 10 bar

Design versions: The TORNADO® modular system, the optimum solution for every application requirement

TORNADO® pumps are able to transfer media containing solids and fibrous matter. Waste water and sludge can be moved quickly and efficiently whenever and wherever required. Whatever the process the TORNADO® range of

sizes, specifications and materials allows a customised solution for all applications. TORNADO® pumps can be mounted on baseplates, trolleys or with a range of drives available include electric motors, diesel engines and hydraulic motors.

Accessories to increase the operational safety of both pump and plant and to prevent downtimes

#### Dry running protector

The dry running protection units (STP2A, STP2D) for use with the Tornado rotary lobe pumps operate by monitoring the temperature between rotor and rotor case during normal operation. Should the operating temperature rise over a predetermined set point due to an increase in friction caused by dry running the unit will shut down the pump, thus preventing any damage to the rotor case liner and rotor. The unit controller can be set for two different switch temperatures. For example the first set temperature could be used for the normally pumped media and the second for a different media temperature, for instance for a cleaning fluid process.

#### Quench pot for single mechanical seals

A quench pot is necessary when the shaft seals need to be operated with a quench, but it is not required that the seal is continuously flushed. The provision of a quench pot would be recommended to prevent dry running of the seals or crystallisation of the pumped media.

#### Pressurised flush for double mechanical seals

A double mechanical seal must be used in conjunction with a system providing a pressurised flush or thermo-siphon system. The pressurised flush is required to lubricate the seals, cool the seals and seal area and flush contaminants from the seal chamber. The flush liquid should be compatible with the pumped media, lubricating and have a high specific heat capacity.

The pressure of the flush should be 2bar above the pressure acting on the inboard seal from the pump chamber and flow rate of the flush must also be controlled.

#### Frequency converter

For varying speed and flowrates a frequency converter is available

#### Over pressure protection

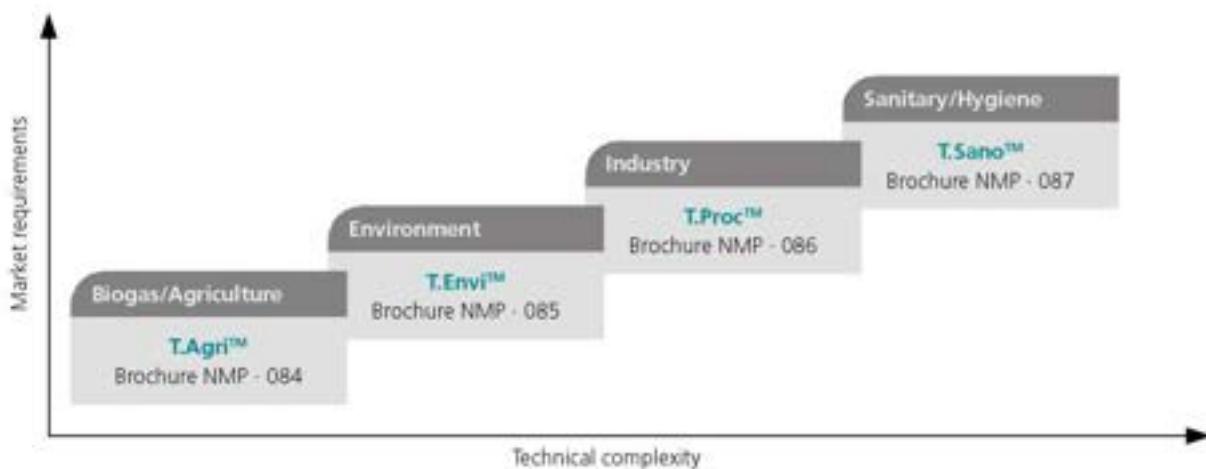

Bypass line with relief valve for over pressure protection

**NETZSCH** TORNADO INFORMATION

Our product philosophy – your benefit: the best pump for your application

The TORNADO® rotary lobe pump is available in four series with each series offering features and specifications meeting specific market needs.

## Hydraulic Coverage

## TORNADO® T2

MODELS 08/45, 06/70, 08/100 & 06/140

### T.Agri, T.Envi and T.Proc

- Elastomer/metal pump head
- Elastomer vs. metal throughout the pump cycle
- Replaceable liners
- DIN/ANSI integral flanged connections
- Front loading seals mounted directly in flow path
- Type A single and single quench
- Flowrates 35 to 525 gpm/8 to 119m<sup>3</sup>/hr
- Pressures to 145psi/10bar
- Temperature up to 212°F/100°C

### T.Proc and T.Sano

- Metal pump head
- DIN/ANSI integral flanged connections
- Front loading seals mounted directly in flowpath
- Type I single, single quench and double flush
- Flowrates 35 to 525 gpm/8 to 119m<sup>3</sup>/hr
- Pressures to 145psi/10bar
- Temperature up to 212°F/100°C
- CIP able for visual cleanliness

# PERISALTIC HOSE PUMPS

**ABAQUE**

PAGE  
468

## ABAQUE

A peristaltic hose pump is a type of sealless positive displacement pump that has rollers or shoes that squeeze a tube or hose as they rotate. The squeezing action moves the liquid along the tube and creates the pumping action.

Peristaltic hose pumps are used in many applications such as mining, wineries, ceramics, mineral processing, chemical and water treatment plants. Peristaltic hose pumps are excellent for pumping slurries and abrasive or solid laden liquids.

Peristaltic hose pumps are one of the few types of pumps in which the fluid being transported does not come into direct contact with any parts of the pumping mechanism. Peristaltic hose pumps also require very low NPSH so they are great for suction lift or restricted suction applications.

### Pump With Confidence

The terms vacuum or suction are commonly used to indicate a pressure below normal atmospheric pressure (14.7 psia). Vacuum is often expressed as the difference in measured system pressure and atmospheric pressure.

### Durable

Ductile iron and steel construction allow higher discharge pressures to 217.5 psi (15 bar). Its solid construction and advanced design also reduce maintenance and repairs.

### Principle of Operation

Pumping action is achieved by compression of a circular loop of elastomeric hose with two diametrically opposed rotating shoes. This rotational motion forces the fluid in the hose to move ahead of each shoe. When each shoe reaches the end of the loop, the reinforced tube immediately returns to its original shape, thereby ensuring suction and priming. The pump housing is partially filled with lubricant, aiding smooth running of the shoes on the hose. The inside of the hose and hose inserts are the only pieces of equipment in contact with pumped fluids, allowing aggressive and contaminated fluids to be pumped.

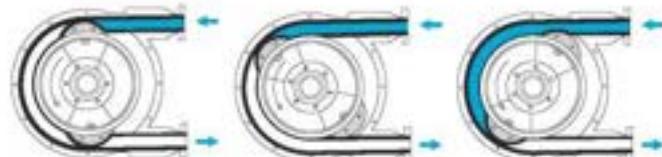

### Reliable

The Blackmer Abaque Series pump is self-priming to 29.5 ft (9 metres) manometric lift. This pump is able to run dry continuously without detrimental effects. The pump is capable of running in forward or reverse.

### Seal Free

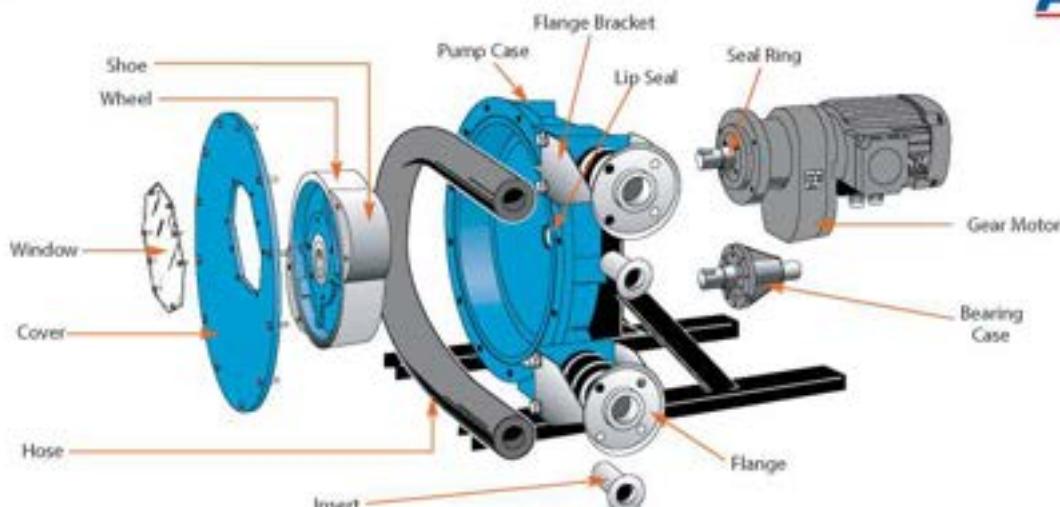

Seal free design eliminates leaks and contamination. Fluids are contained within the hose. The hose is the primary maintenance component.

### Applications

- Chemical process industry
- Food industry
- Industrial and municipal water treatment
- Paints and coatings
- Filter press equipment
- Ceramics
- Mining

## BLACKMER ABAQUE SERIES PUMP CONSTRUCTION

Pump Case	Ductile Iron
Wheel	Ductile Iron
Shoes	Aluminium or cast iron
Cover	Steel and Polycarbonate
Flange and brackets	Stainless steel - ANSI or DIN
Hoses	Natural rubber; Buna (NBR) or EPDM
Hoses inserts	Stainless steel (std.), PPH or PVDF

## Hoses

The following hoses are available for use in the Abaque Series pump:

- Natural rubber: Highly resilient with excellent abrasion resistance and strength. Generally resistant to diluted acids and alcohols.
- Buna (NBR): Highly wear resistant to oily products.
- EPDM: High chemical resistance, especially with concentrated acids, alcohols and ketones.
- Hypalon

## Options

The Abaque Series pump is available in 10 different sizes, ranging from flow rates of .07 to 290 gpm (15 to 66,000 litres/h). Choose close-coupled or bare-shaft models.

Also available:

- Leak detector
- Vacuum assist
- Non-metallic inserts (PPH, PVDF)

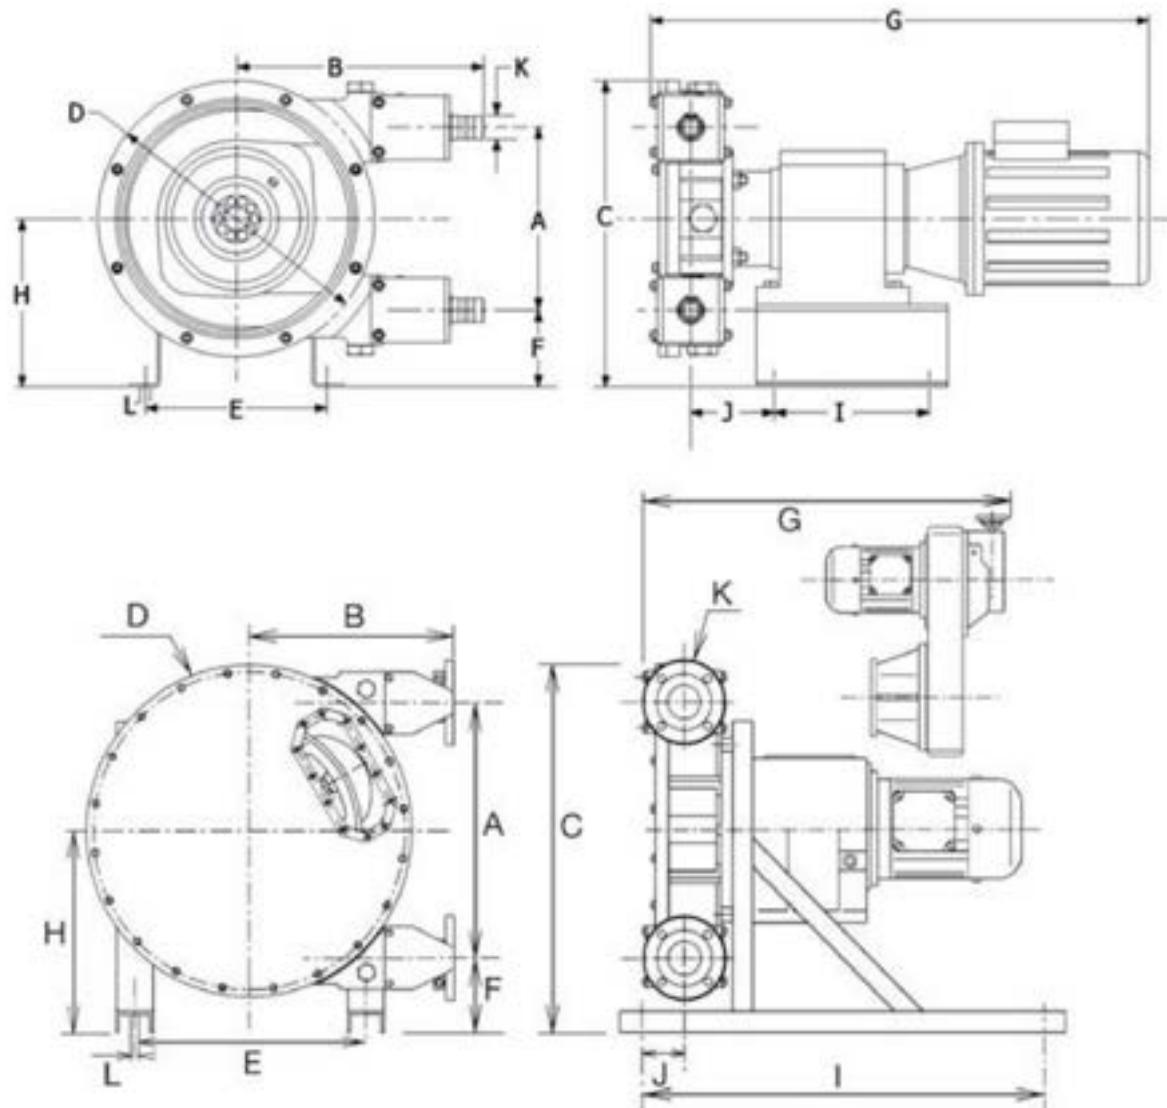

Close-Coupled A40

## OPERATING LIMITS

Maximum Temperature		80°C (176°F) absolute maximum. Temperature of pumped fluid is limited by hose liner material. NR Natural Rubber 70°C (158°F) NBR Nitrile Buna Rubber 70°C (158°F) EPDM Ethyl Propylene Rubber 80°C (176°F) Rpm (thus flow) is limited by temperature above 40°C (104°F). Please consult performance curves for specific rpm limitations.
Minimum Temperature		-20°C (-4°F) Please consult IOM manual.
Maximum Viscosity		1,800 to 35,000 cP depending on pump size, rpm, and presence or not of vacuum assist. Please consult performance curves for specific effects.
Maximum Working Pressure	Sizes 10 and 20 Sizes 25 to 125	8 bar (116 psi) 15 bar (217.5 psi) with proper shimming. Please consult IOM manual.
Maximum Self-priming Lift		9 metres (29.5 ft) manometric lift. Actual lift is dependent on system installation, pumped fluid, and temperature.

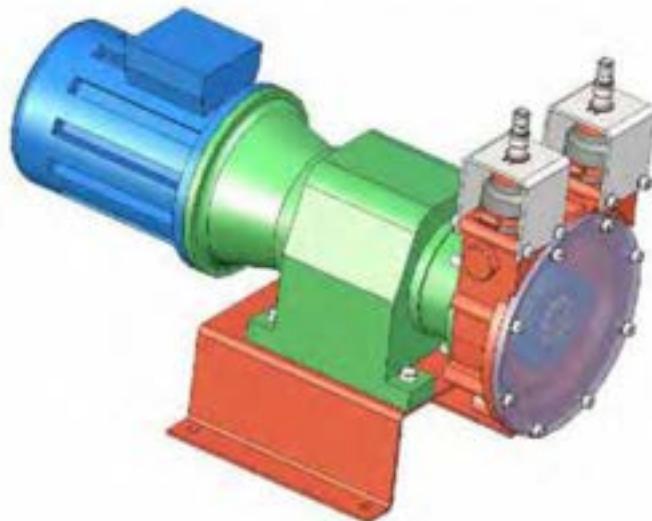

NOTE: Materials, pipe connections, and operating limits for type A (close coupled) and type AS (long coupled w/ bearing box) are the same unless noted otherwise.

PART NAME	STANDARD MATERIALS	AVAILABLE OPTIONS
Pump Body (#1)	Ductile Iron (GJS 400.15)	
Cover (#2) (Size 10 and 20)	Polycarbonate	
Cover (#2) (Size 25)	Steel (24.1) w/ Polycarbonate window	
Cover (#2) (Size 40 to 125)	Steel (S235JRG2) w/ Polycarb window	
Wheel (#3) (All except 25)	Ductile Iron (GJS 400.15)	
Wheel (#3) (25)	Ductile Iron (GJS 400.18+D41)	
Shoe (#5) (Size 25 to 80)	Aluminum Alloy	Cast Iron (GJL 250)‡
Shoe (#5) (Size 100 and 125)	Cast Iron (GJL 250)	
Boot (#6)	EPDM	
Insert (#12)	316L Stainless Steel	PPH, PVDF
Lubricant (#14)	Glycerin Compound	
Hose (#16)	Natural Rubber (NR) hose with Polyamide reinforcement and NR liner.	Hose liner options: Buna (NBR), EPDM
Flange Bracket (#18)	304 Stainless Steel	
Hub (#19/20)	Cast Iron	
Frame (#21) (A10 and A20 only)	304 Stainless Steel	
Frame (#21) (AS10, AS20 and all others)	Steel (S235JRG2)	
Flange (#47)	304 Stainless Steel	
Screws, Nuts, Washers	304 Stainless Steel	
O-rings and Lip Seals	FKM (Fluorocarbon)	
<b>Bearing Housing for "AS" Type Pumps</b>		
Bearings	Steel	
Housing (#101)	Cast Iron (GJL 250)	
Shaft (#102)	Steel (42CrMo4)	
Lubricant	Grease	
Paint	Blue RAL 5010 50-70µm	

<sup>†</sup> May affect lead time. Please consult factory.

<sup>‡</sup> Please consult factory for availability and lead time of optional iron shoes for any given model size.

## Technical data

MODEL	MAX FLOW RATE (CONTINUOUS DUTY)	MAX FLOW RATE (INTERMITTENT DUTY)	MAX VISCOSITY AT 10 RPM	CONNECTION SIZE		CONNECTION TYPE
				ANSI & BARBED	DIN/IS PN16	
A10	0.10 (0.44)	0.13 (57)	12000	(0.63")	10mm	Barbed Hose

FLOW RATES		10 RPM	20 RPM	30 RPM	40 RPM	50 RPM	60 RPM	70 RPM	80 RPM	90 RPM	MAXIMUM DISCHARGE PRESSURE
A10	m³/hr GPM	0.015 0.07	0.030 0.13	0.045 0.20	0.060 0.26	0.075 0.33	0.090 0.40	0.105 0.46	0.120 0.53	0.135 0.59	116 PSI 8.0 Bar

## Performance Curve

## Instructions for use of this curve:

1. Determine if viscosity exceeds 1800 Cps.
2. If yes, move left until the red viscosity line is intersected.
3. Move down to read the maximum possible rpm for the fluid's viscosity.
4. Determine the maximum pressure for your application.
5. Move vertically from selected rpm to the pressure line greater than the required pressure.
6. Move left to determine the required KW for the application.

## Temperature Notes:

For temperatures above 40° C, select appropriate temp line, move left to appropriate pressure line. Move straight down. This is the max. rpm for continuous duty at this temperature.

## Examples:

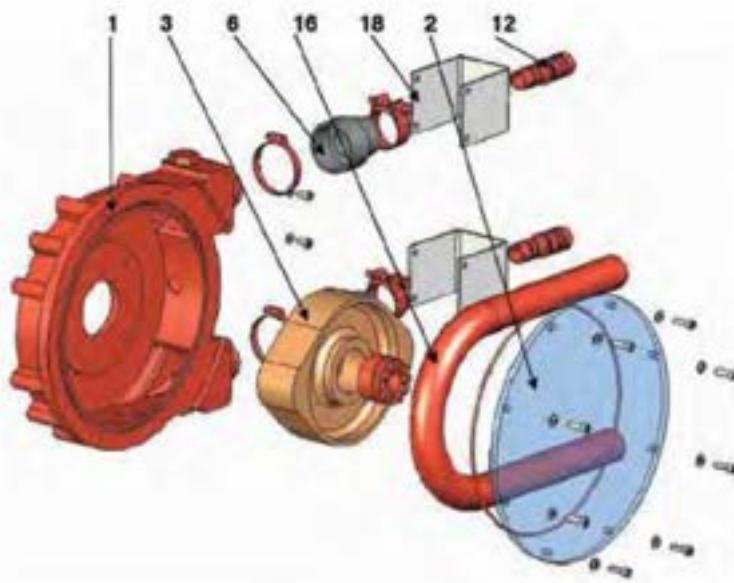

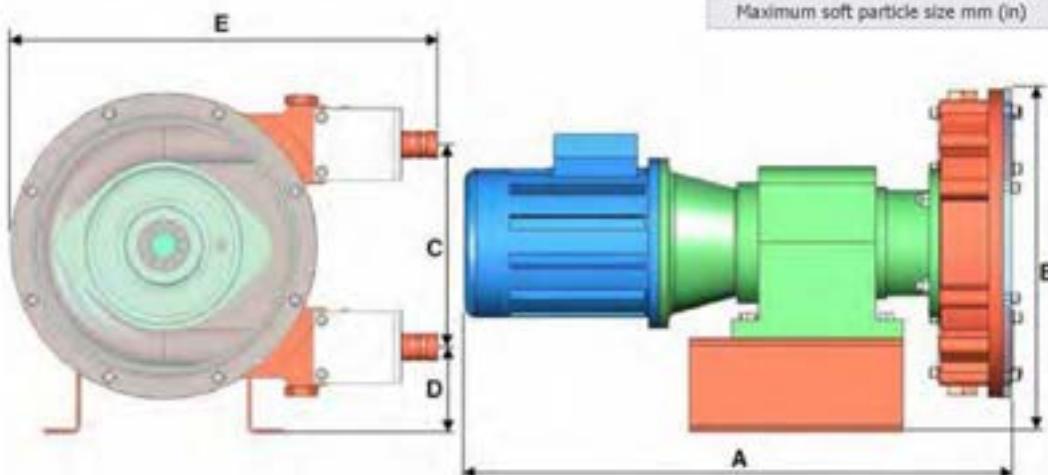

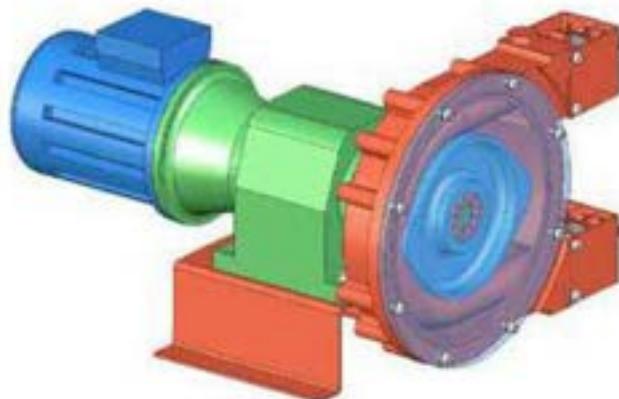

- Max continuous rpm at 8 bar is 50 rpm  
Max continuous rpm at 5 bar is 58 rpm  
Max continuous rpm at 60° C & 5 bar is 37 rpm

\* Standard maximum product temperature is 40° F

\* Intermittent service is 2 hour max. of continuous duty followed by a minimum of 1 hour stop

## Technical data

MODEL	MAX FLOW RATE (CONTINUOUS DUTY)	MAX FLOW RATE (INTERMITTENT DUTY)	MAX VISCOSITY AT 10 RPM	CONNECTION SIZE		CONNECTION TYPE
				ANSI & BARBED	DIN/IS PN16	
A32	4.65 (20.47)	7.23 (31.83)	25000	(1-1/2")	DN40	Flanged

FLOW RATES		10 RPM	20 RPM	30 RPM	40 RPM	50 RPM	60 RPM	70 RPM	80 RPM	90 RPM	100 RPM	110 RPM	120 RPM	130 RPM	140 RPM	MAXIMUM DISCHARGE PRESSURE
A32	m³/hr	0.38	0.75	1.13	1.50	1.88	2.25	2.63	3.00	3.38	3.75	4.13	4.50	4.88	5.25	217 PSI 15.0 Bar

## Performance Curve

## Instructions for use of this curve:

- Determine if viscosity exceeds 2000 Cps.
- If yes, move left until the red viscosity line is intersected.
- Move down to read the maximum possible rpm for the fluid's viscosity.
- Determine the maximum pressure for your application.
- Move vertically from selected rpm to the pressure line greater than the required pressure.
- Move left to determine the required KW for the application.

## Temperature Notes:

For temperatures above 40° C, select appropriate temp line, move left to appropriate pressure line. Move straight down. This is the max. rpm for continuous duty at this temperature.

## Examples:

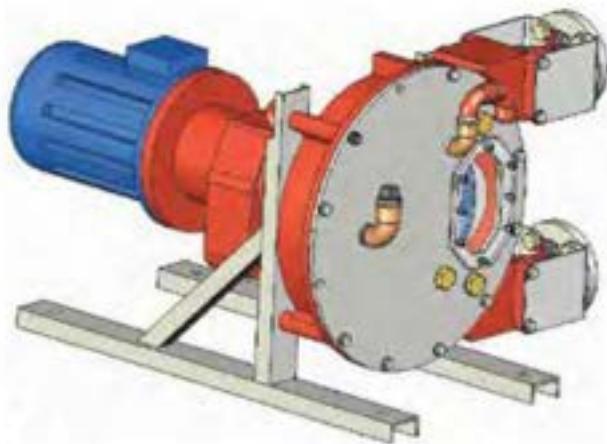

- Max continuous rpm at 15 bar is 48 rpm
- Max continuous rpm at 7.5 bar is 72 rpm
- Max continuous rpm at 60° C & 10 bar is 37 rpm

\* Standard maximum product temperature is 40° F

\* Intermittent service is 2 hour max. of continuous duty followed by a minimum of 1 hour stop.

## Technical data

MODEL	MAX FLOW RATE (CONTINUOUS DUTY)	MAX FLOW RATE (INTERMITTENT DUTY)	MAX VISCOSITY AT 10 RPM	CONNECTION SIZE		CONNECTION TYPE
				ANSI & BARBED	DIN/IS PN16	
A100	36 (158)	54 (237)	31200	(4")	DN100	Flanged

FLOW RATES		10 RPM	20 RPM	30 RPM	40 RPM	MAXIMUM DISCHARGE PRESSURE
A100	m³/hr GPM	12 53	24 106	36 158	48 211	217 PSI 15.0 Bar

## Performance Curve

## Instructions for use of this curve:

1. Determine if viscosity exceeds 5100 Cps w/o vacuum assist; 6900 Cps w/vacuum assist (requires additional equipment).
2. If yes, move left until the red viscosity line is intersected.
3. Move down to read the maximum possible rpm for the fluid's viscosity.
4. Determine the maximum pressure for your application.
5. Move vertically from selected rpm to the pressure line greater than the required pressure.
6. Move left to determine the required KW for the application.

## Temperature Notes:

For temperatures above 40° C, select appropriate temp line, move left to appropriate pressure line. Move straight down. This is the max. rpm for continuous duty at this temperature.

## Examples:

Max continuous rpm at 15 bar is 17 rpm

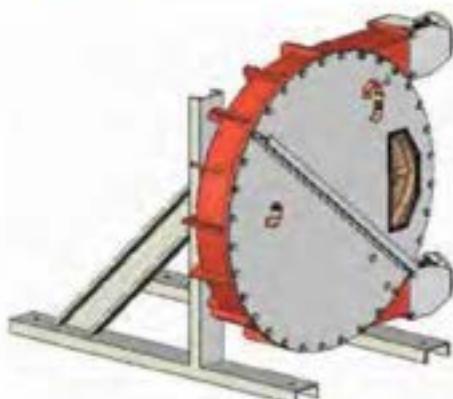

Max continuous rpm at 7.5 bar is 25 rpm

Max continuous rpm at 60° C & 10 bar is 16 rpm

\* Standard maximum product temperature is 40° F

\* Intermittent service is 2 hour max. of continuous duty followed by a minimum of 1 hour stop

- Normally closed contact:

A large industrial piping system with several green helical rotor pumps integrated into the circuit. The pipes are made of stainless steel and are supported by a network of metal structures. The pumps are mounted on a concrete floor. In the background, there are more pipes, valves, and other industrial equipment.

# HELICAL ROTOR PUMPS

**NETZSCH**

PAGE  
502

# NETZSCH

Helical Rotor Pumps are a type of rotary positive displacement pump that has a single threaded helically shaped rotor turning inside of a double-threaded helically shaped rubber stator. This produces a progressing cavity that moves the liquid through the pump and creates the pumping action.

Helical Rotor Pumps are used extensively in sewerage and water treatment plants to pump polymer, sludge and chemicals. They are also used in all types of industrial applications for pumping a wide variety of thin and thick liquids, including corrosive liquids and liquids containing solids. As Progressive cavity pumps can handle difficult, thick, solid laden liquids they can often be used in applications where no other pump would perform.

## Universal Installation

NEMO® progressive cavity pumps are utilised in various industries to convey many types of fluids in a continuous, low pulsating manner, while maintaining an accurate flow.

## Wide Range of Applications

The pumps are specifically designed for products with the following characteristics:

- High solids content (maximum particle size up to 6"/150 mm) and free of solids
- Low to high viscosity (1 mPas - 3 million mPas)
- Thixotropic and dilatant

- Shear-sensitive
- Abrasive
- Lubricating and non-lubricating
- Aggressive (pH 0 - 14)
- Adhesive
- Toxic

## Large Range of Capacities and Pressures

- Capacities from a few millilitres up to 500 m³/h (2200 gpm)
- Number of stages ranging from 1 up to 8 for pressures from 6 (90 psi) up to 48 bar (680 psi) as standard, up to 240 bar (3,400 psi) as high pressure

## Various Conveying Elements

Four different rotor/stator geometries are available allowing optimisation of the pump characteristics for specific applications.

## Extensive Range of Materials of Construction

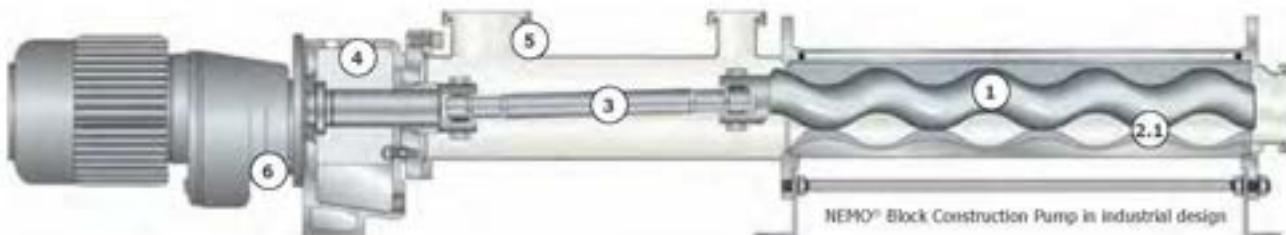

Wetted parts are available in numerous materials. Standard housings are made of cast iron and stainless steel. Parts are available in mild steel, stainless steel and tool steel. Other materials are available upon request. Elastomers like highly abrasion resistant natural rubber, oil, acid and alkali-proof elastomers, Atlas and Viton are available. When elastomers cannot be used due to high temperatures or compatibility reasons, NETZSCH offers a variety of solid materials.

## A Wide Variety of Shaft Sealing Options

Shaft seals range from single-acting mechanical seals, with and without quench, to double-acting mechanical seals in back-to-back or tandem arrangement as well as cartridge seals as per customer specification. For certain applications there are gland packings, lip seals and specially designed seals. In the case of toxic fluids we offer a pump with a magnetic coupling which is 100 % leakproof.

## Additional Features

- High suction capability up to 9 mwc (30 ftwc)
- Reversible direction of rotation and thus flow
- Installation in any position
- Smooth and quiet operation
- Temperatures of -20 up to + 200 °C (-5 up to +570 °F)

### 1 Rotor

In wear and corrosion resistant design, including the wear-free ceramic rotor, NEMO CERATEC®.

### 2.1 Stator with Conventional Technology

Vulcanised into a tube, with integrated seals on both ends in a variety of NEMOLAST® elastomers, plastics or metals. Stator inlet with chamber to facilitate the entry of the fluid into the conveying chamber.

### 2.2 Stator with iFD Technology

The stator consists of a disposable elastomer part and an aluminium outer sleeve in which the NEMOLAST® elastomer is housed. The advantages of this new technology are the reduced starting torque, the higher degree of efficiency, longer lifetime, simple and quick change as well as the easy disposal.

### 3 Drive Chain

Plug in shaft with coupling rod and two universal joints for power transmission from the drive to the rotor.

### 4 Shaft Seal

Standard design with single-acting, wear resistant, bidirectional mechanical seal; on request different types of single-/double-acting mechanical seals by various manufacturers, cartridge and other special seals as well as gland packing. For toxic fluids, magnetic, leakage-free couplings are available.

### 5 Suction Pressure housing

Designed to optimise through flow with flanges or threads according to DIN and other international standards. Materials in cast iron, chromium nickel molybdenum steel, rubber-coated or Halar® cast iron as well as special materials according to specifications.

### 6 Block Construction Design

A drive flanged directly to the housing reduces length, weight and gives a constant shaft height, independent of construction and size of the drive. It is both maintenance and service-friendly as well as economical.

## Modular Design

NEMO® Pumps belong to the group of rotary positive displacement pumps. The conveying elements consist of the rotor which rotates within the fixed stator. As all four pump geometries have the same outer dimensions, we have a modular design where - apart from rotor and stator - all other components are identical. When a change in flow rate or pressure is required, installed NEMO® Pumps can be adapted to the new operating conditions by simply changing rotor and stator.

## S/L-Geometry

The single helical screw/rotor has a circular cross section, an extremely long pitch and large thread depth which oscillates when the rotor is turned within the fixed stator. The cross section of the stator is the same profile as that of the rotor, however, the stator is a 180° internal twin start thread. As a result of the 1/2 ratio lobe geometry cavities are formed between the rotor and stator when the two are put together. By the turning movement of the rotor the progressing cavities between rotor and stator transport the fluid in a smooth and continuous manner from the suction to the discharge side of the stator. The flow rate is determined by the pitch of the rotor/ stator, diameter and eccentricity as well as the speed of the pump. The pressure capability depends on the number of stages and the differential pressure per stage up to 6bar (85psi). The 2-stage NEMO® Pump in S-geometry can reach a differential pressure up to 12bar (170psi) with a flow rate of 100%. A single-stage NEMO® Pump in L-geometry, has the same outer dimensions as the 2-stage pump in S-geometry, the same diameter and eccentricity but a pitch double that of the S-geometry rotor/stator. Therefore, the pump produces a flow rate of 200 % when compared to the S-geometry at a differential pressure of up to 6 bar (85 psi).

## D/P-Geometry

The twin start helical rotor has an elliptical cross section, a long pitch and large thread depth. It rotates within a circular eccentric motion within the fixed stator, the form of which is the same geometry as the rotor, however, the stator is a triple start internal thread with 120° interval starts. As a result of the 2/3 ratio lobe geometry cavities are formed between the rotor and stator when the two are put together. By the turning movement of the rotor, the progressing cavities between rotor and stator transport the fluid in a smooth and continuous manner from the suction to the discharge side of the stator. The flow rate is determined by the pitch of rotor/- stator, elliptic diameter and eccentricity as well as the speed of the pump. The pressure capability depends on the number of stages with the differential pressure being up to 6bar (85psi) per stage. In D/P- geometry the cavities are approximately 75% of the size of the S/L- geometry however they open twice per revolution compared to once per revolution in 1/2 stage geometries. Therefore D/P-geometry rotors/stators have a 50% increase in the flow per revolution compared to S/L-geometry. The 2-stage NEMO® Pump in D-geometry can reach differential pressures of up to 12bar (170 psi) at a flow rate of 150% over that of the S-geometry. A single-stage NEMO® Pump in P-geometry, has the same outer dimensions as the 2-stage pump in D-geometry, the same ellipse and eccentricity but a pitch double that of the D-geometry rotor/ stator. Therefore the pump produces a flow rate of 300% over that of the S-geometry at a differential pressure of up to 6bar (85psi).

**S-Geometry**

- Very smooth conveyance
- Compact dimensions despite high number of stages
- Large cross sections of rotor inlet
- Low flow velocity/NPSH
- Conveyance of compacted products possible
- Conveyance of large solid particles

- 1/2 lobe
- Double stage

- Flow rate: 100 %
- Differential pressure: 12 bar (170 psi)

**L-Geometry**

- Greater volumetric efficiency/long service life due to long seal lines between rotor and stator
- Compact dimensions together with high flow rates

- 1/2 lobe
- Single stage

- Flow rate: 200 %
- Differential pressure: 6 bar (85 psi)

**D-Geometry**

- Extremely compact dimensions despite high pressures and flow rates capabilities
- Almost pulsation free conveyance
- High dosing accuracy

- 2/3 lobe
- Double stage

- Flow rate: 150 %
- Differential pressure: 12 bar (170 psi)

**P-Geometry**

- Compact dimensions in conjunction with very high flow rates
- Almost pulsation free conveyance
- High dosing accuracy
- Good volumetric efficiency/long service life due to long seal line between rotor and stator

- 2/3 lobe
- Single stage

- Flow rate: 300 %
- Differential pressure: 6 bar (85 psi)

## Performance

Capacities up to 85m<sup>3</sup>/h (360gpm)

Pressures up to 6bar (85psi)

## Description

Compact design with flanged robust IEC parallel shaft gear unit. The patented and integrated NEMOLAST® reversible stator and the simple design guarantee a long service life and low life cycle cost. Increased application possibilities with the use of P or L geometries.

## Range of Applications

Industrial applications in environmental industries for low to highly viscous fluids with or without solids.

## Performance

Capacities up to 400m<sup>3</sup>/h (1,800 gpm)

Pressures up to 24bar (340psi)

## Description

Compact design with flanged drive; low investment and operating and maintenance costs. Four rotor/stator geometries for optimised performance.

## Range of Applications

Industrial applications in environmental, food, oil and chemical industries for low and highly viscous fluids with or without solids.

## Performance

Capacities up to 500m<sup>3</sup>/h

(2,200gpm) Pressures up to 48 bar (680 psi) as standard, up to 240 bar (3,400 psi) as high pressure

## Description

Design with bearing housing and drive shaft allows for universal use of all types of drives. Four rotor/stator geometries for optimised performance.

## Range of Applications

Industrial applications in environmental, food, oil and chemical industries for low and highly viscous fluids with or without solids.

## Performance

Capacities from 0.1 up to 1000 l/h

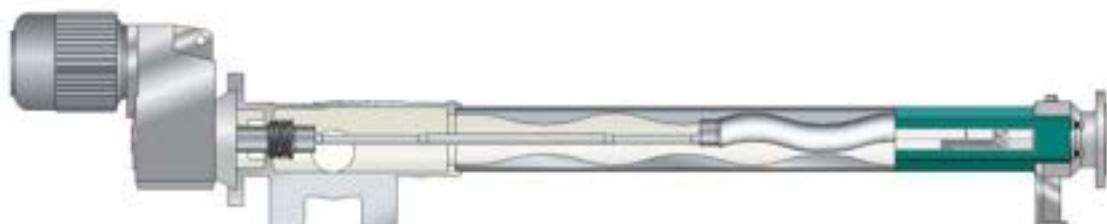

(0.025 up to 260 gph) Pressures up to 15bar (212psi)

## Description

High dosing accuracy (deviation < 1 %). Compact design with directly flanged drive.

## Range of Applications

Industrial applications in environmental and chemical industries for conveying and dosing of fluids of low or medium viscosity with or without solids.

# NETZSCH

## Performance

Capacities up to 200m<sup>3</sup>/h (880gpm)  
Pressures up to 12 bar (170 psi)

## Description

Industrial applications in environmental, food and chemical industries for highly viscous and non free-flowing fluids with or without solids.

## Range of Applications

Housing with removable rectangular/ square hopper and coupling rod with feeding screw with or without force feed chamber for easier entry of the fluid into the rotor and stator.

## Performance

Capacities up to 200 m<sup>3</sup>/h (880 gpm)  
Pressures up to 48 bar (680 psi)  
NEMO® BF / SF with aBP-Module™ available from size NM045 up to NM090

## Description

Industrial applications in environmental and chemical industries for highly viscous, compact and crumbly media that do not have a tendency to bridge. For media which tend to build bridges the pump is available with aBP-Module™.

## Range of Applications

Housing with removable, enlarged rectangular hopper and tapered force feed chamber as well as coupling rod with patented, positioned feeding screw for optimal transfer of the medium to the rotor and stator.

## Performance

Capacities up to 200m<sup>3</sup>/h (880gpm)  
Pressures up to 48bar (680psi)  
NEMO® BP / SP available from size NM090

## Description

Industrial applications in environmental and chemical industries for compact and crumbly media that may have a tendency to bridge.

## Range of Applications

Housing with integrated bridge breaker, mixing additions, enlarged rectangular hopper and tapered force feed chamber as well as coupling rod with patented, positioned feeding screw for optimal transfer of the medium to the rotor and stator.

## Performance

Capacities up to 70m<sup>3</sup>/h (308gpm)  
Pressures up to 48bar (680psi)

## Description

Industrial applications in the biogas technology in environmental industries for highly viscous and non free-flowing fluids with or without solids.

## Range of Applications

Housing with large, rectangular/ square hopper and and tapered force feed chamber, as well as coupling rod with patented, positioned feeding screw for optimal transfer of the medium to the rotor and stator. The ideally placed flushing stud at the hopper housing sees to the best possible blending of the substrates.

# NETZSCH

## General

NEMO® semi-submersible pumps are used for emptying barrels, containers, tanks, clarifiers, pits, etc. They are also used where space is limited and when cavitation may be a danger or where low NPSH is available. Furthermore the pumps are suitable for emptying barrels containing materials harmful to water and the environment where emptying through a connection at the bottom of the barrel is not permitted.

## Performance

Capacities up to 140m<sup>3</sup>/h (620gpm). Pressures up to 24bar (340psi). Depending on the application a number of designs/immersion variations are available. The immersion depth is adjusted as required by the application.

## Description

Compact design with directly flanged drive. Four rotor/stator geometries for optimal performance. Immersion depth up to 10 m. The length of the immersed tube can be modified by using an extended pump housing or an additional suction pipe or a combination of both.

### NEMO® Immersible Pump BT with Suspension Bracket

This pump is used for emptying open barrels and containers. It is equipped with a suspension bow for crane suspension. Immersion depth up to 3 m.

### NEMO® Immersible Pump BT with Integral Mounting Plate and Discharge Connection

This pump is used in closed pits, tanks and containers where there is the possibility to vertically flange mount the pump to the tank lid. Depending on pump size, speed and immersion depth up to 10m, an additional support guide is available to secure the pump to the bottom or to the wall near the bottom. Removal of the pump from a full tank is possible because the guide units are self-centering and secure the pump suction without fixings. The product is either piped to the outside vertically through the lid via a 90° elbow or horizontally through the tank wall. This minimises the dead space in the pump housing thus reducing the overall height of the pump above the tank lid. This version is normally used where there is only limited space available.

## General

NETZSCH offers the complete eccentric screw pump program for up and downstream production complete with the necessary equipment such as pump, drive head and motor, control cabinets, rods and other accessories. The range of pumps includes downhole pumps, submersible downhole pumps, transfer pumps, multi-phase pumps and injection pumps. These pump systems are used for a continuous, pressure stable, non-emulsifying, almost pulsation-free conveyance of waste water and crude oil.

## Wide Scope of Applications

The pumps are mainly used for fluids with the following properties:

- High solid content (up to 30 % sand) and also free of solids
- Low to high viscosities
- Abrasive
- High content of gas
- High content of water
- High fluid and environmental temperature

## Injection Pumps

NETZSCH high-pressure pumps are rated for pressures up to 240 bar (3,400 psi) for universal applications. They are also suitable for water re-injection. The system is insensitive to high solid content in the fluid and has a low energy consumption due to its high efficiency.

## Large Range of Capacities and Pressures

- Capacities from a few bpd up to 75,500 bpd
- Pressures up to 200 bar (2,830 psi)

## Upstream Submersible Downhole Pumps

Above all, this system is suitable for deep installation including doglegged and horizontal bore holes. A remarkable feature of this conveying system is that no rods are required and, thus, wear on the tubing is dramatically reduced.

## Large Range of Capacities and Pressures

- Capacities from 6 bpd up to 2,200 bpd
- Pressures up to 240 bar (3,400 psi)
- Installation depth up to 2,200 m (7,700 ft)

## Downstream Transfer Pumps and Multi Phase Pumps

NETZSCH Transfer and Multi-Phase Pumps have proved to have a long service life even in the case of fluids with high solids and gas contents. Consequently, operational and maintenance costs are low as well as is the initial investment cost.

NETZSCH Water re-injection pump

NETZSCH Transfer and Multi-phase pump

NETZSCH Down-hole-pump

## General

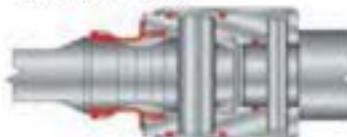

The correct joint design in a NEMO® Pump has a decisive influence on the operational reliability and life cycle cost. The optimal joint for the respective pump series is selected depending upon application, operational conditions as pump series is selected depending upon application, operational conditions as well as the flow rates.

## B Universal Pin Joint

The NEMO® universal pin joint is the standard joint for NEMO® industrial pumps because of its simple design and outstanding reliability. To achieve a long service life, the joint is oil filled and sealed by the NEMO® SM® seal. The joint can also be used without seal in case of extremely high temperatures and products where elastomers are not suitable. The joint consists of a minimum number of parts that enables simple dismantling for maintenance.

### **B Universal Pin Joint**

With SM® Seal

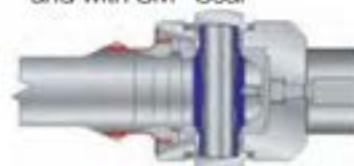

## V Pin Joint

The operational characteristics of the NEMO® V pin joint are similar to those of the B pin joint. For longer service life in difficult applications they are strengthened by hardened bushings fitted into boreholes in the coupling rod and the rotor/drive shaft head. The V pin joints with hardened bushes are easy to remove for maintenance purposes. Standard on the 125 pump size.

### **V Pin Joint**

With hardened bushings  
and with SM® Seal

## H Hygienic Pin Joint

The open, patented pin joint was designed specifically for use in hygienic pumps. It is crevice and dead space free, polished and, therefore, easy to clean. The joint is made in accordance with US 3-A Sanitary Standards.

### **H Hygienic Pin Joint**

Patented

## F NEMO® Flextec Flexible Rod

The flexible rod is wear-and maintenance free because there are no components moving against each other as in other joint types. Neither lubrication nor seals are required. Therefore, the flexible rod is suitable for high pressures and temperatures. The flexible rod is also free from crevices and dead spaces which allows it to be used for pumping highly sensitive products in aseptic conditions. It is designed in accordance with the US 3-A Sanitary Standards.

### F NEMO® Flextec Flexible Rod

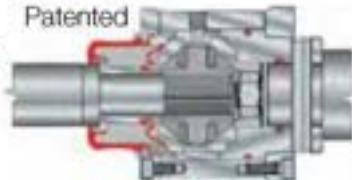

## K Joint

The patented K joint was designed for extremely arduous industrial applications involving constant pump running, frequent stop/start or shock loads. It is kinematically designed so that the torque and axial loads are borne by separate elements within the joint. The joint is oil filled and hermetically sealed by two seals which are resistant (compatible) against the lubricant and the pumped product. Filling the space between the two seals with oil allows the use of the joints at pressures up to 12bar (170 psi).

### K Joint

Patented

## Z Double Seal Pivot Joint

For the largest flows and pressures possible with NEMO® pumps where the torques and axial loads are at their highest (in bearing housing size NM 125SY and above) the pumps are fitted as standard with a cartridge type precision pivot joint. The joint is oil filled, hermetically sealed by two seals which are resistant (compatible) against the lubricant and the pumped product. It is suitable for continuous operation.

### Z Joint

Patented

## General

NEMO® barrel emptying pumps draw themselves towards the bottom of the barrel and empty barrels and containers in chemical, pharmaceutical and food industries with the absolute minimum of product wastage. The heart of the barrel emptying system is a NEMO® progressing cavity pump. When the NEMO® pump is started a vacuum is created below the follower plate, which at the same time creates a light pressure on the media to guarantee a consistent suction into the pump.

## Wide Range of Applications

NEMO® barrel emptying pumps are predominantly used for media with the following properties:

- Low to very high viscosity
- Dilatant, thixotropic or having a viscous structure
- Highly filled products
- Shear- and pressure-sensitive
- Highly abrasive
- Lubricative and non lubricative
- Adhesive and gel like
- Heated and unheated

## Large Range of Capacities

- Capacities from approximately 2 l/h to 4.8 m<sup>3</sup>/h

## Barrel Sizes

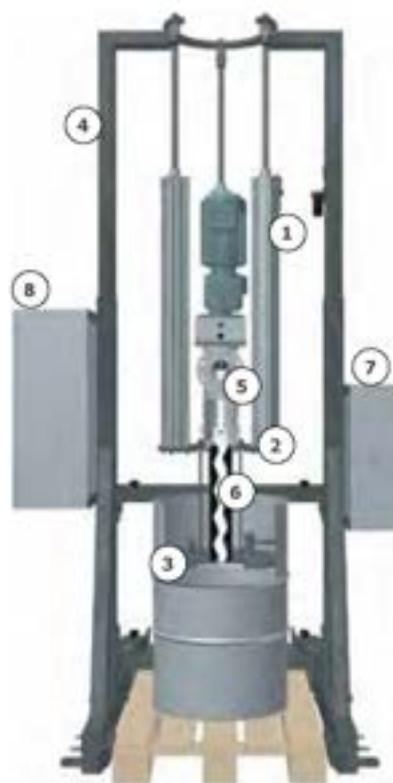

- Barrels between 1 l to 200 l as standard
- Special barrels up to 1000 l

## Advantages

- Nearly shear free conveyance and dosing of highly viscous, abrasive and filled products
- Continuous or intermittent discharge
- Complete discharge, residues < 1 - 2 %
- No pressure or flow hiatus
- Smooth dosing with hardly any pulsation
- Low pressure on the follower plate in the barrel
- Discharge of conical barrels
- Low pressure conditions in the system
- Continuously adjustable discharge capacity through the speed of the drive
- Dosing directly from the barrel

| <b>5</b> NEMO® Pump          |                             |

## Universal Use

The NETZSCH M-Ovas® is particularly useful in all industries, where particles in the medium endanger process reliability. All solids in the medium are reliably macerated to prevent pipework and downstream equipment from blocking.

## Wide Range of Applications

The NETZSCH M-Ovas® is particularly suitable for the use in the following industries:

- Sewage and waste water treatment
- Biogas plants
- Abattoirs
- Organic biological waste recycling plants
- Rendering plants
- Paper and Pulp production
- Agriculture
- Sugar factories
- Leather production
- Spas and health resorts

### 1 Housing

A hydrodynamic design with integrated stone trap for solids, with a clean-out port. The sediment can easily be removed by opening the cover plate. The housing is galvanised to ensure corrosion resistance. Available in stainless steel (optional).

### 2 Housing Cover

Cutting unit integrated into housing cover. A gas strut is fitted to the cover to assist opening. This allows for easy cleaning of solids in the stone trap.

### 3 Cutting unit

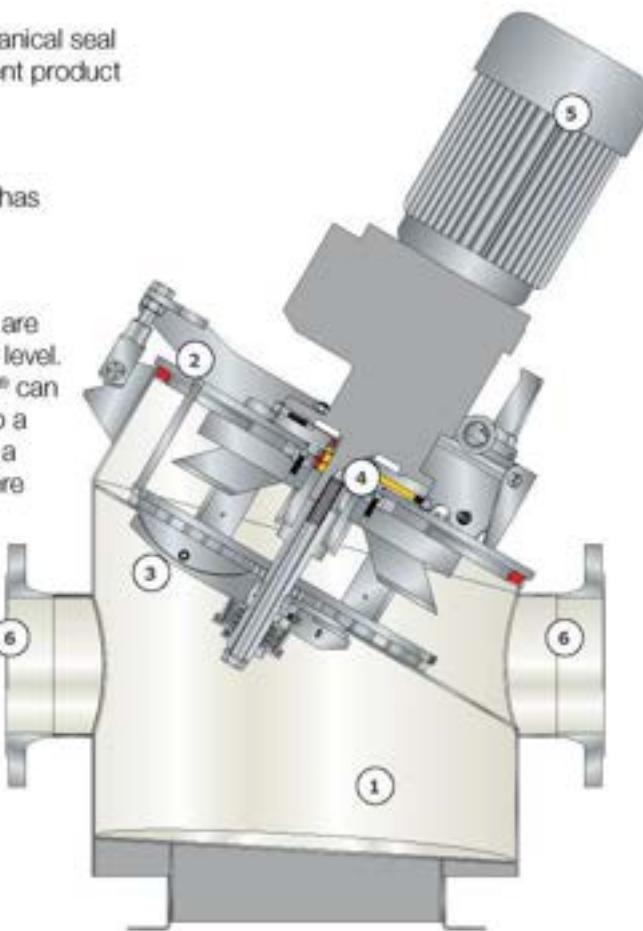

Cutting plate of wear resistant, hardened steel. Optimum cutting performance through a cutting unit with self-adjusting blade mechanism. Blades made from wear resistant hardened steel. The flywheel effect of the cutter head reduces the installed power. Easy exchange of cutting plate and cutting blades without the necessity to disassemble the pipe-work.

## High Delivery Capacities

- Flow capacities up to 300 m<sup>3</sup>/h of waste water and sludge with up to 7 % dry solids content
- Two sizes of model available depending on the flow rate

## Advantages

- Compact design for high flow rates
- Easy and fast disassembly of cutting plate and blade units
- Low energy demand at high flow rates
- Integrated stone trap with separate clean-out and drain ports
- Easy access allows simple disposal of the sediment
- Self-adjusting blades reduce maintenance and ensure optimal cutting performance
- Sealing by means of a mechanical seal with oil quench

# NETZSCH

## Universal Use

NETZSCH macerating systems are designed for the most arduous of industrial applications to prevent pipe blockage and damage to downstream equipment by reliably reducing the size of solid matter in pumped media.

For applications with particularly chunky and sturdy solids in the waste water flow the NETZSCH Taskmaster® is needed.

## Wide Range of Applications

The NETZSCH Taskmaster® is particularly suitable for use in the following industries:

- Waste water treatment
- Agriculture
- Slaughterhouses and recycling plants
- Canning/tinning factories
- Industrial kitchens
- Sugar factories

## High Delivery Capacities

Capacities from 1 m³/h to 270 m³/h with a solids content rate of up to 10 %.

## Advantages

- Optimised cost performance ratio
- Low running costs through highest efficiency
- Cartridge design cutter assemblies allow simple and quick maintenance providing high operational safety.
- Through the different, very low number of revolutions of the shafts the NETZSCH twin shaft macerator offers the option of self cleaning.
- The robust design of the NETZSCH Taskmaster® ensures a high performance coupled with trouble free operation.
- Whether aluminium tins, ladies sanitary products, glass, golf balls, wood, plastic, bones, sugar beet or rags need to be reduced we offer the technology to meet your requirements.

### 1 Housing

A robust hydrodynamic inline housing which can be directly connected into a pipeline. Also available as channel unit.

### 2 Cutting unit

High quality blades made of special steel reliably macerate the solids in the medium. The cartridge units comprise of six cutters and six spacing rings. To reach the required particle size, a selection of different blades is available.

### 3 Shaft Seal

The shaft is sealed with a cartridge type mechanical seal.

### 4 Bearing

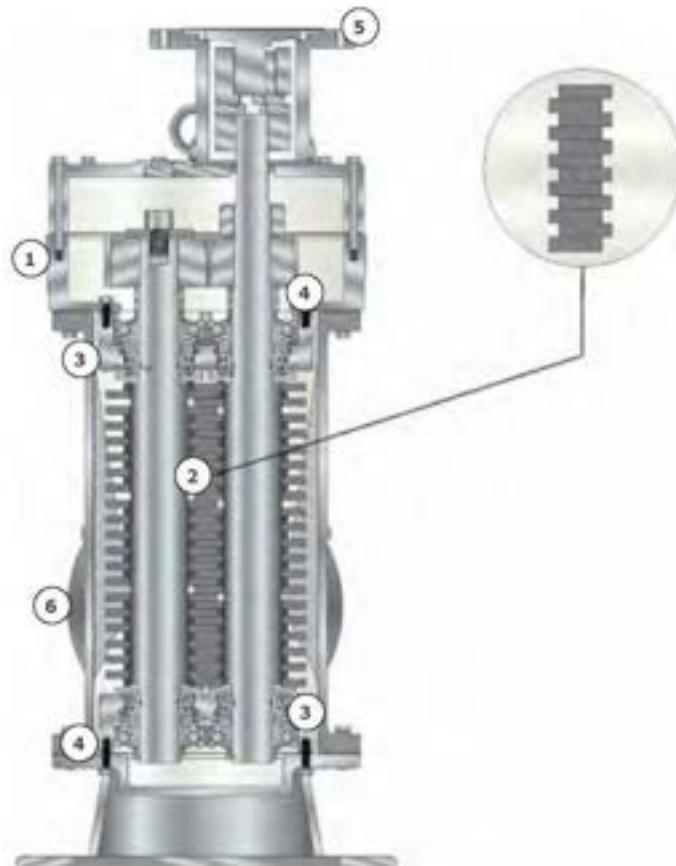

Robust bearings on both ends of the shafts ensure smooth running and prevent the shafts from spreading when especially hard solids are encountered.

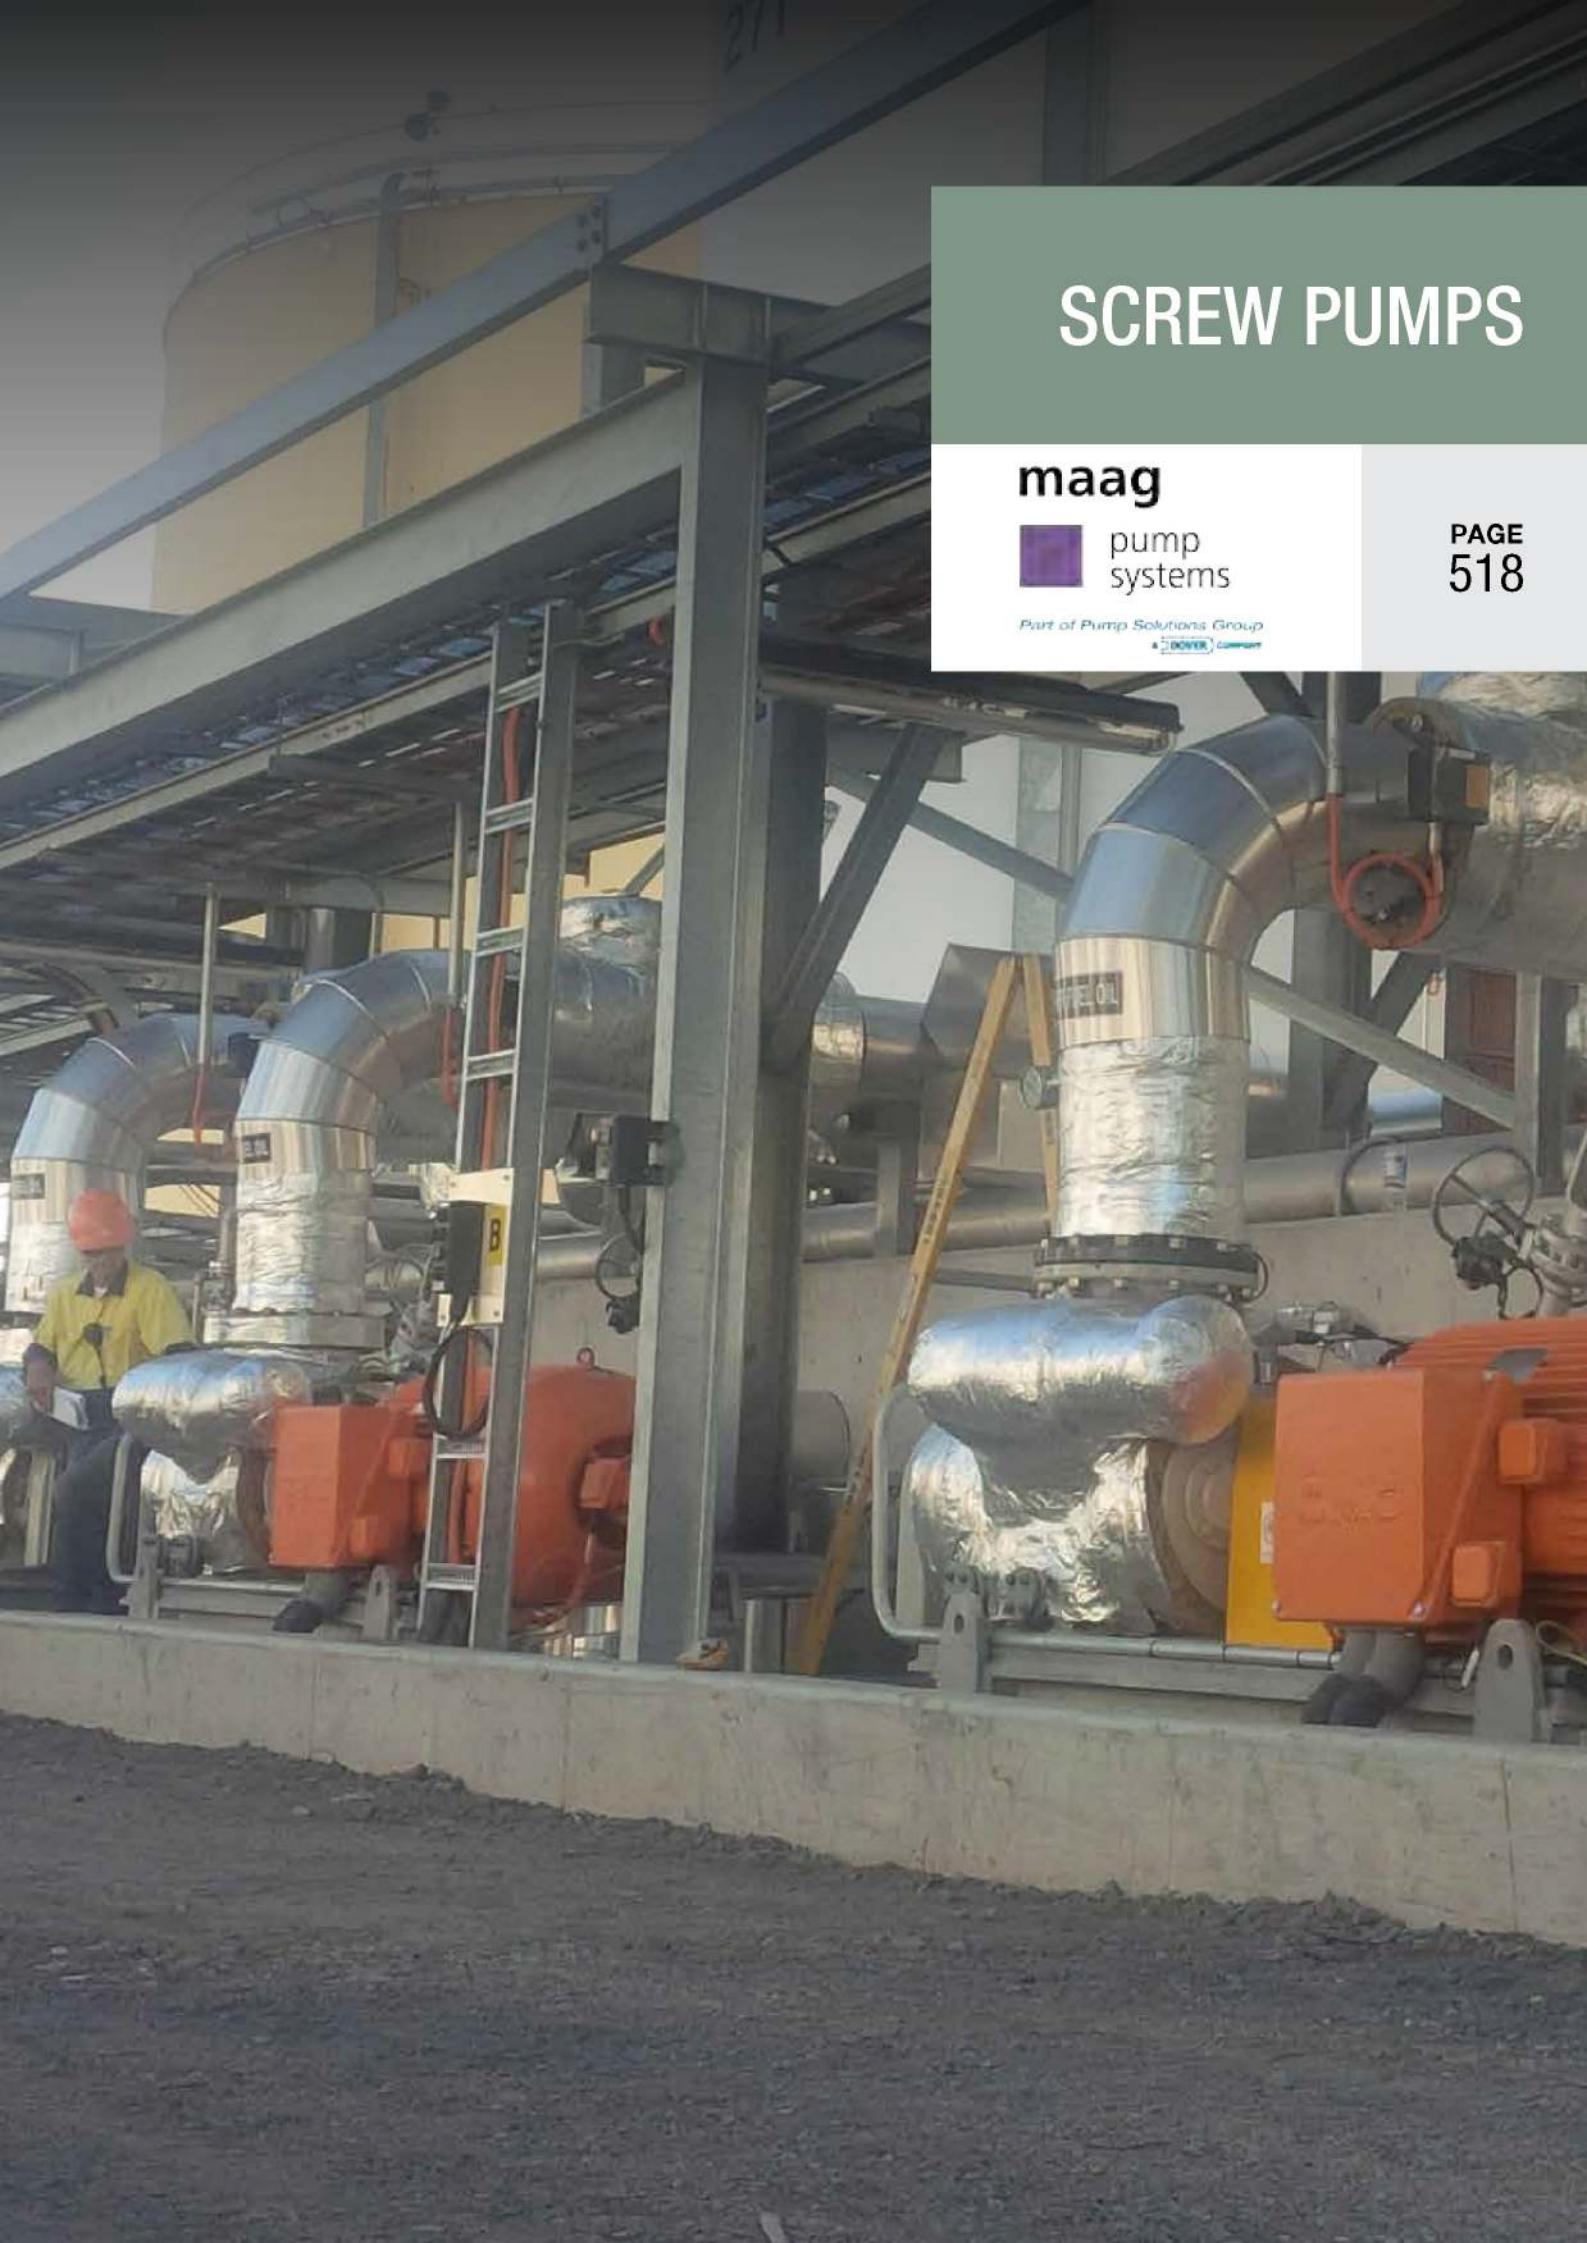

### 5 Lantern

Via an elastic coupling with flange every IEC motor or drive can be accommodated.

### 6 In-line Version

Product inlet and outlet are positioned on the same level. The NETZSCH twin shaft macerator can be directly connected into a horizontal pipeline or to a pump inlet of a NEMO® pump or a NETZSCH TORNADO® industrial rotary lobe pump, where flange is set at 90°.

A large industrial pump system is shown in an outdoor setting. The system consists of several large, shiny, cylindrical metal components, likely screw pumps, connected by various pipes and valves. A worker wearing a yellow vest and orange hard hat is standing next to the equipment, providing a sense of scale. The background shows a concrete structure with some yellow and white markings.

Plant and Process Equipment - Oil &amp; Gas

S Series Screw Pumps excel in challenging applications. S Series pumps and systems are reliable, durable and capable of overcoming your most difficult transfer needs daily, and long into the future. Engineered with the pump user in mind, our pumps are ideally suited for applications requiring a pump that can move thin fluids, as well as transfer very demanding viscous liquids. S Series pumps are ideally suited for high-pressure oil transfer, but also offer many configurations for non-lubricating, LPG, sulfur and solid-laden applications. Increase the efficiency and profitability of your company today... with S Series pumps.

### Best suited for...

- Chemicals
- Acids
- Lube oil
- Terminals
- Caustics
- Polymers
- Kerosene
- Shipping
- Adhesives
- Crude oil
- Oil fields
- Bilge and ballast
- Food and beverage
- Asphalt
- Residuals
- Fire-suppression
- Soap
- Diesel
- Bulk transfer
- Petrochemicals
- Seawater
- Loading/unloading

### Features & Benefits:

- Vertical and mobile configurations
- Self-developed filters and frequency converters
- Solid-handling options
- Specialty lines:
- Non-lubricant fluid options
- Liquid sulfur pumps
- Capacities to 2,500 m<sup>3</sup>/h (11,023 gpm)
- Multi-phase pumps
- Discharge pressures to 100 bar (1,450 psi)
- Granulators
- Various connection types: GB/DIN/ANSI
- Filters
- Temperatures to 450°C (842°F)

## Markets Served

### PROCESS

Maag's attention to detail, quality assurance procedures, and expertise in the chemical process market, ensures your success. Our application experts can assist in your toughest applications to ensure maximum efficiency and Mean Time Between Repair (MTBR).

Typical Applications Handled:

- Chemical
- Adhesives
- Food and beverage
- Petrochemicals
- Polymers

### TRANSPORT

Whether it's tankers, railcars, or terminals, Maag's solutions offer top-notch reliability in the transport industry. Keep your products moving with one of our application engineer's today.

Typical Applications Handled:

- Bulk transfer
- Loading / unloading
- Terminals
- Shipping

### ENERGY

Maag's knowledge and proven success in the power generation, oil & gas industries have instilled confidence in users worldwide. Consult our experts at Maag today, to ensure your success in the energy market.

Typical Applications Handled:

- Crude oil
- Asphalt
- Kerosene
- Oil field
- Residuals
- Electric generation

### MARINE

Maag is here with proven success, to support the marine and shipbuilding industries. With a wide range of compatibility, the safe, swift and reliable transfer of marine fluids is a core function of Maag pumps.

Typical Applications Handled:

- Shipbuilding
- Diesel
- Lube oil

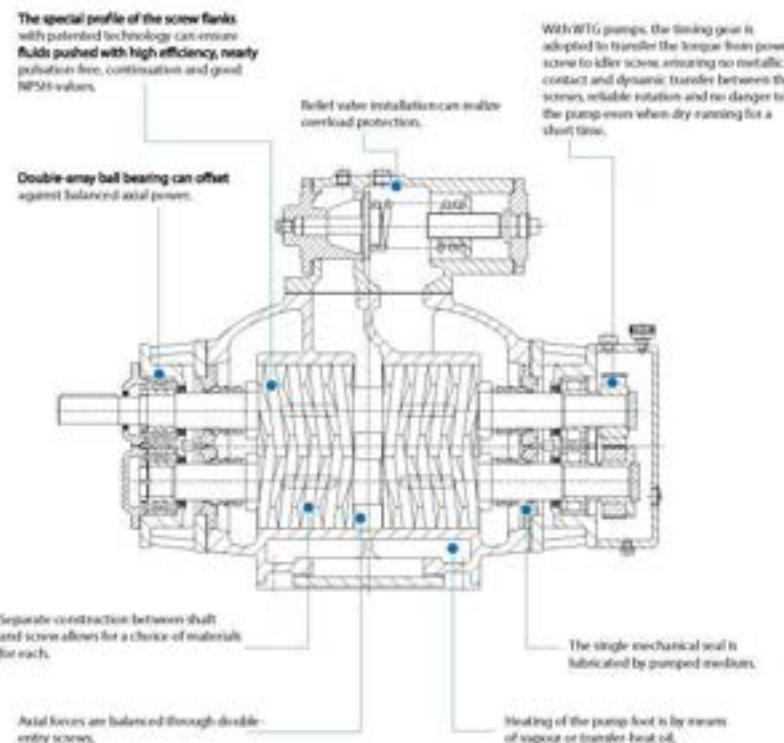

maag

Pump &amp; Pumping Solutions - 2010/11

## Principle of Operation:

Maag Twin Screw Pumps are rotary, positive displacement pumps capable of handling various clean liquids that contain no solids. The pump is composed of two sets of opposed screws. During pump operation, the screws on the two shafts are engaged and form a sealed cavity with the surrounding pump casing. The pumped liquid is shifted axially as the screw shafts turn and steadily and constantly convey the liquid to the centre of the pump where the discharge port is located. Since hydraulic forces on two screws are opposite and equal, the hydraulic axial stress on shafts is automatically balanced.

Pump and Pumping Equipment Division

## Principle of Operation:

The S Series Triple-Screw Pump manufactured by MAAG is a type of positive displacement rotatory pump for handling clear, lubricating liquid without solid content. The internal structure of the Triple-Screw Pump includes a male drive spindle, two female secondary spindles and the case that holds the three screws. The sealed chamber moving at a uniform speed is formed between the case and the three rotating screws along the axial direction. During the male drive screw rotation, liquid moves in the sealed chamber along the axial direction continuously and smoothly from suction to discharge.

## Model Selection

### A. User-Provided Parameters

- Working temperature of the media, T
- Viscosity at working temperature,  $\nu$
- Suction pressure (or vacuum), P1
- Discharge pressure, P2
- Working flow, Q
- Installation mode
- Any other supporting requirements

### B. Notes for Model Selection

- Select proper structure based on the features of the media being pumped.
- Select proper speed based on the viscosity of the media. If media viscosity is  $> 760 \text{ mm}^2/\text{s}$ , please contact company for assistance.
- Select the model based on the flow and pressure from the S Series Triple-Screw Pump performance data sheet.
- Check and identify the NPSHr value from the cavitation redundancy sheet based on the pump specification, speed and viscosity. It should be ensured that the  $\text{NPSHr} < \text{NPSHa}$  (cavitation redundancy of the inlet piping). Otherwise, a pump with one size larger or lower speed should be selected.
- After selecting the pump specification, identify the shaft power ( $\text{N}\cdot\text{m}$ ) from the performance chart. When selecting mating motors,  $\text{N}\cdot\text{m} \geq K \times N$ .
- Please refer to the table below for the value of K.

N (KW)	N <= 5	5 < N <= 10	10 < N <= 50	N > 50			
K	1.25	1.2	1.15	1.1

Plant and Process Equipment - Oil &amp; Gas

## Applications

- Transportation and boost pump in fuel system, fuel pump for fuel furnace
- Transportation and dispensing pump in oil delivery system
- Lubricating oil pump in industrial applications
- Hydraulic pump in hydraulic transmitting system

## Technical Data

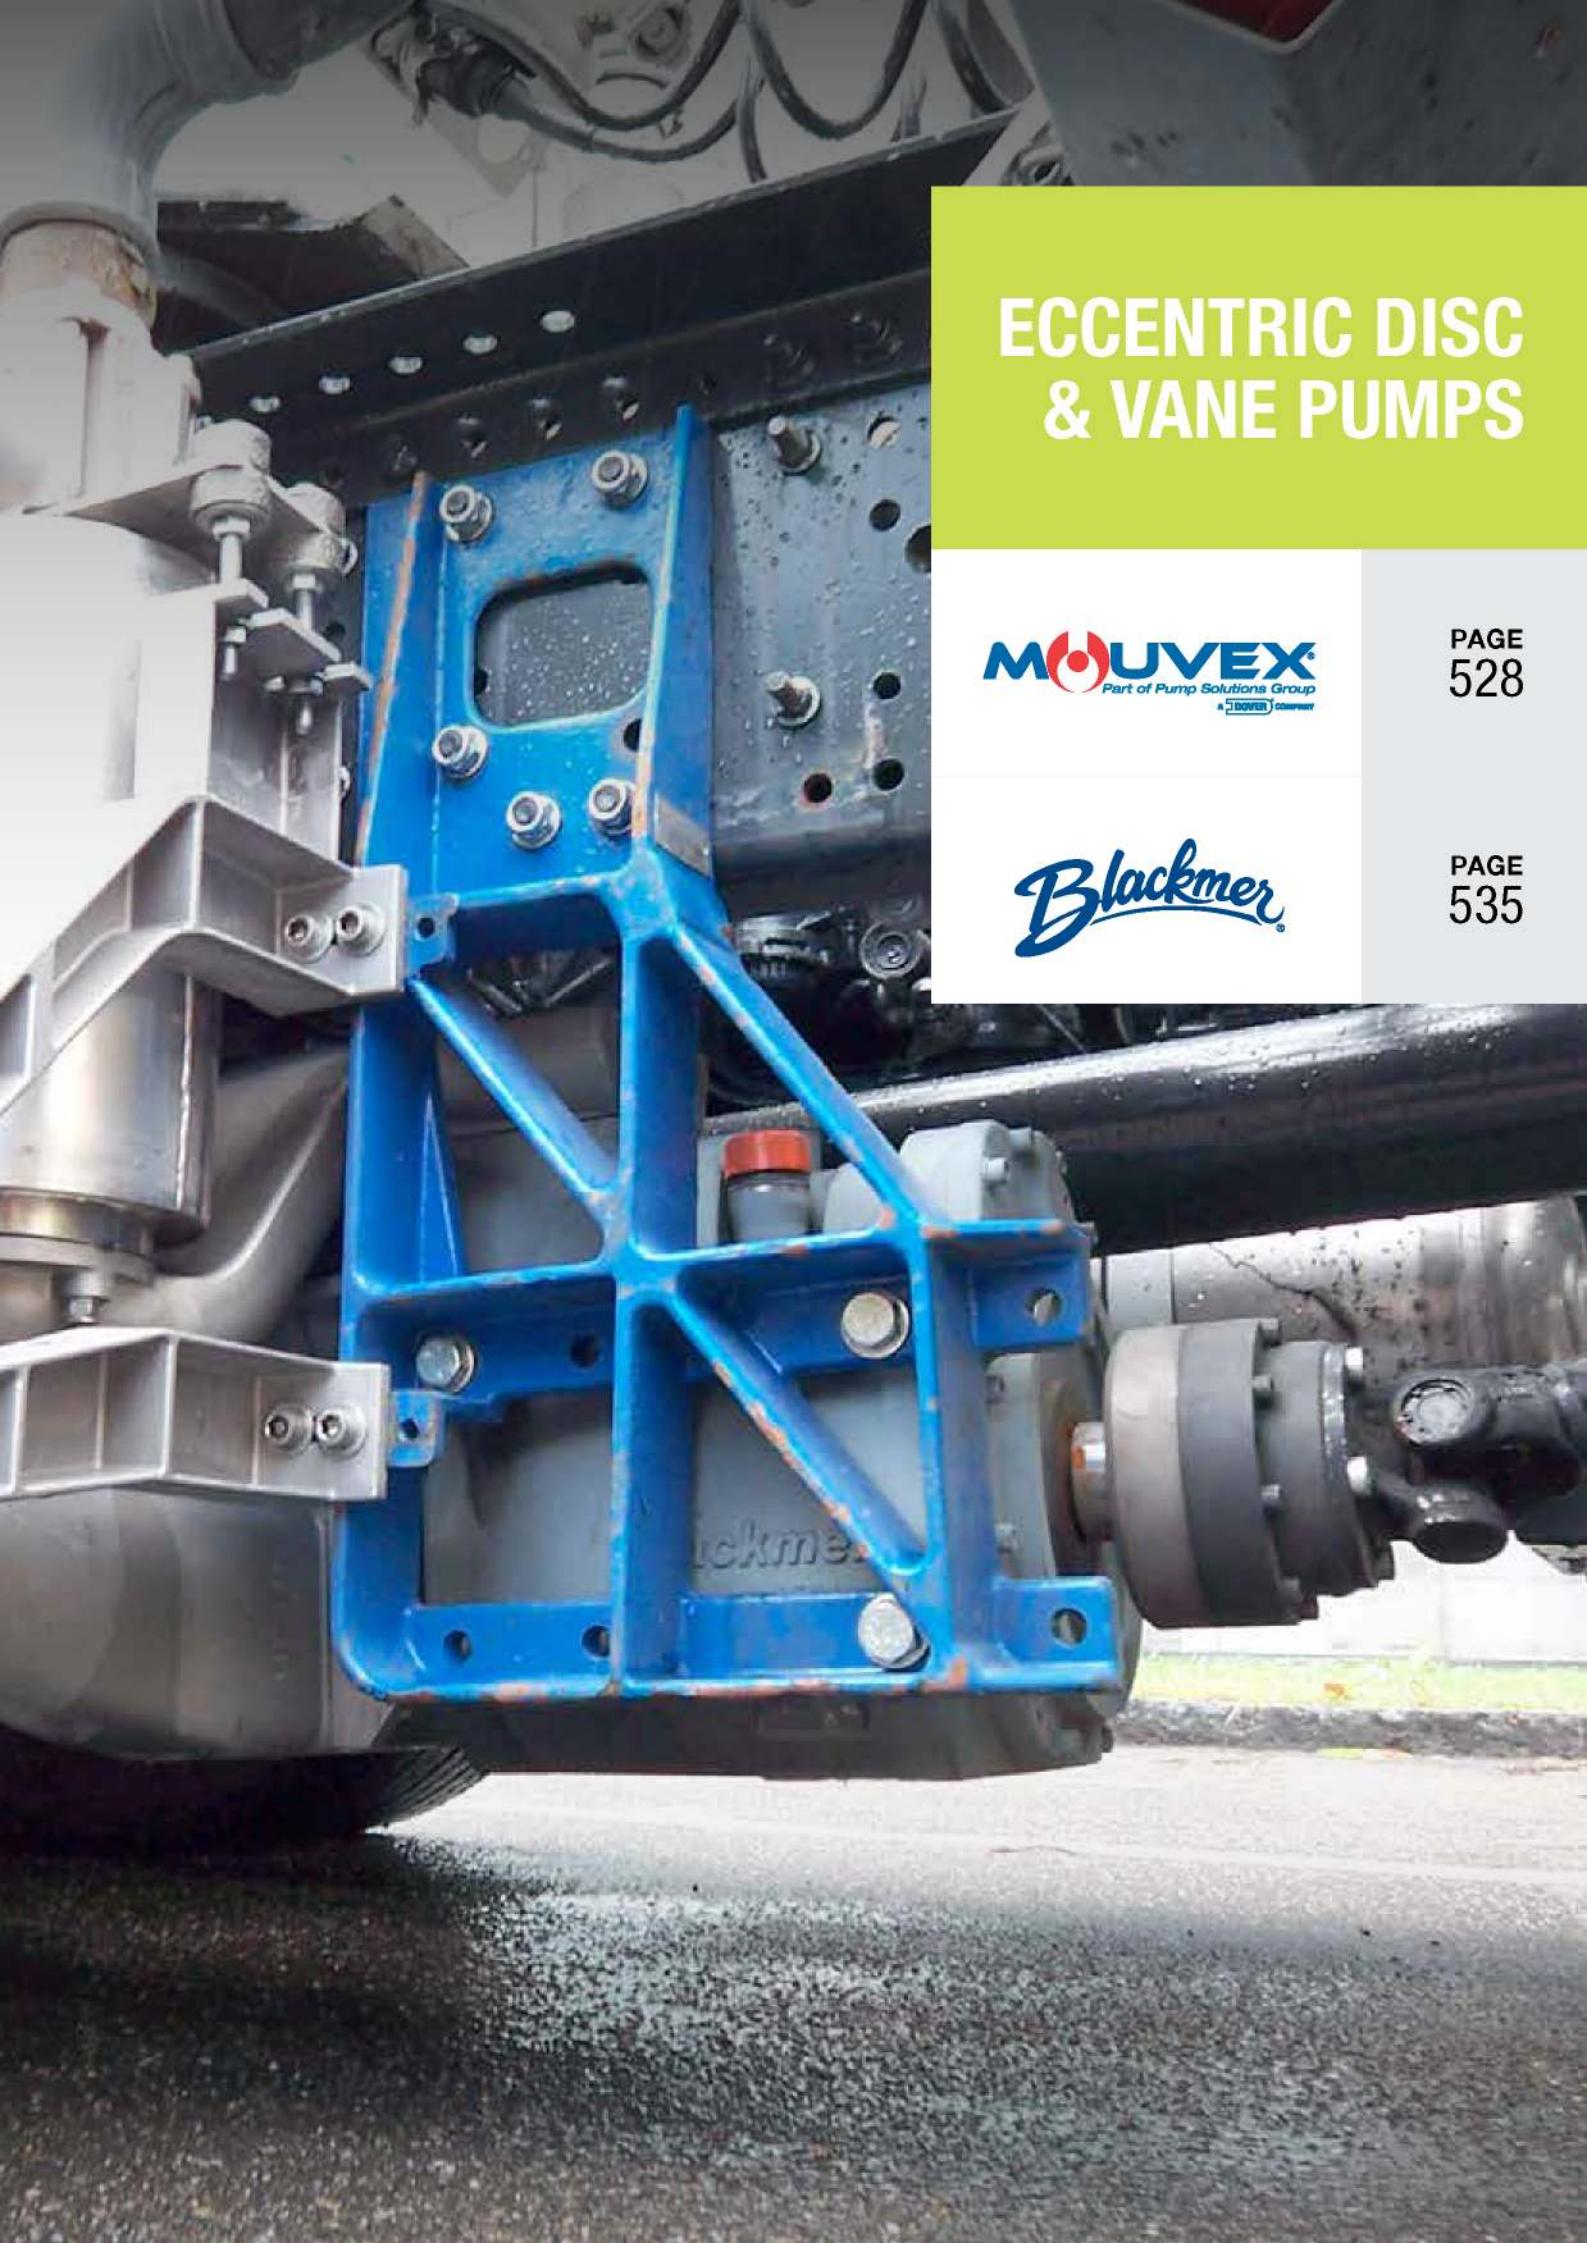

- Pump casing: Cast iron/ductile iron/cast steel/cast stainless steel
- Shaft: Alloy steel/ stainless steel
- Screws: Ductile iron/alloy steel/stainless steel
- Casings constructions to select:
- Top inlet
- Top outlet

## Features and Benefits

- Low pressure fluctuation, stable flow
- Strong self-priming capability, reverse rotation, high efficiency
- Low noise and vibration
- Compact construction and size for ease of install and maintenance

*Blackmer*

PAGE  
535

## How It Works

Eccentric movement technology is at the core of Mouvex. Mouvex founder Andre Petit identified the challenges that gear and lobe pump users were facing in optimizing their process and invented the eccentric disc pump as a result. Mr. Petit specifically placed a disk inside the pump cylinder so the eccentric disk would be more user-friendly.

This disc is driven by an eccentric bearing that is installed on the pump shaft, thus creating four distinct pumping chambers that increase and decrease in volume as the disc is rotated by the eccentric bearing. The four chambers produce both suction and discharge pressures as the chambers move in pairs that are 180 degrees apart. This ensures that the fluid passes through the pump at a constant and regular flow rate.

## Mouvex Principle

Eccentric disc pumps consist of a cylinder and pumping element mounted on an eccentric shaft. As the eccentric shaft is rotated, the pumping element forms chambers within the cylinder, which increase in size at the intake port, drawing fluid into the pumping chamber. The fluid is transported to the discharge port where the pumping chamber size is decreased. This action squeezes the fluid out into the discharge piping.

## Mouvex Technology

Eccentric disc pumps consist of a cylinder and pumping element mounted on an eccentric shaft. As the eccentric shaft is rotated, the pumping element forms chambers within the cylinder, which increase in size at the intake port, drawing fluid into the pumping chamber. The fluid is transported to the discharge port where the pumping chamber size is decreased. This action squeezes the fluid out into the discharge piping.

### Filling Internal Chamber

### Emptying Internal Chamber

## Markets Served

### PROCESS

Chemical companies around the world rely on Mouvex for their fluid transfer needs. Mouvex transfers raw products from storage containers to loading of product onto transport vehicles.

#### Typical Applications Handled:

- Acids
- Carbon Dioxide
- Solvents
- Soap & Detergents
- Paper - Glue
- Paints, Inks & Coatings
- Isocyanate - Polyols
- Polyurethane

### TRANSPORT

Mouvex Pumps and compressors move raw product from rail and transport vehicles to bulk storage tanks and facilities.

#### Typical Applications Handled:

- Oils
- Fuels
- Chemicals
- Liquid Foods
- Bio-lube
- Asphalt
- Liquid Waste
- Liquid Fertilizers
- Dry Bulk

### MILITARY & MARINE

Mouvex is proud to support the military with our leading-edge pumps and compressors.

#### Typical Applications Handled:

- Fuel Oil
- Gasoline
- Kerosene
- Lube Oil

### ENERGY

Mouvex pumps are widely used to load, transfer and unload petroleum.

#### Typical Applications Handled:

- Fuel Oil
- Gasoline
- Diesel
- Biofuels
- Feedstock
- Methanol
- Ethanol
- Oil & Gas
- Processing

### HYGIENIC

Mouvex is a leader in the food, beverage and pharmaceutical industries with its innovative Eccentric Disc Pumps that improve productivity and efficiency.

#### Typical Applications Handled:

- Dairy
- Beverages
- Confectionery
- Sauces & Dressings
- Animal Food
- Cosmetics
- Pharmaceutical

## Micro C Series

The Micro C Series Seal-less Eccentric Disc Pumps are designed for continuous transfer and low-flow metering. They deliver consistent performance and are minimally affected by fluctuations in pressure and viscosity.

### Applications

- Dairy
- Sauces & Dressings
- Beverages, Wines and Beers
- Cereals
- Cakes and baked goods
- Confectionery
- Cosmetics
- Pharmaceutical
- Animal food & pet food
- Laboratory
- Chemical
- Biofuel
- Paints & Coating
- Paper

### Technical Data:

- Body, bellows and cylinder: 316 stainless steel
- Disc: CY5SnBiM (anti-galling alloy)
- Max. temperature: 100°C (212°F)

### Certifications & Associations:

Micro C Series: C125 Eccentric Disc Pump

### Features and Benefits:

- Seal less design eliminates leakage
- Drainability
- Eliminates maintenance
- Small footprint
- Self-priming with strong suction lift
- Low shear
- More efficient
- Ability to run dry
- Saves costs
- Ability to clear pipes
- Maintains consistent performance over time
- Easy integration

### Performance Data:

- Max. speed: 1,000 rpm
- Max. output: 800 L/hr (3.5 gpm)
- Max. pressure: 15 bar (217 psi)

## Product Recovery

Mouvex® has several pump models that includes product-recovery capability in food and beverage, pharmaceutical, and cosmetic/personal-care product manufacturing:

## Seal-less Design

Designed without mechanical seals, packing, or magnetic drive, Mouvex Eccentric Disc pumps feature a unique seal-less design with superior volumetric performance, resulting in high efficiency level over the time and optimized productivity gain and energy savings.

The Mouvex principle pumps also provide very high suction and discharge pressure that allow the capability to self-prime and fully strip lines, maximizing product recovery.

## C Series and SLS Series:

- Feature a unique seal-less design with double stainless steel bellows to ensure long life and product safety
- For higher capacity applications
- Efficient and modular design for process applications
- Your solution for air and shear sensitive products and requiring a high sanitary standard

## Advantages:

- Eccentric Disc design allows for consistent flow and improved energy savings
- Extremely gentle, pulse-free flow to protect shear-sensitive products
- Reduced maintenance with no mechanical seals or timing gears
- Easy to install

## Features and Benefits:

- Seal-less design eliminates leakage
- Ability to strip and drain transfer piping/tubing
- Line-stripping capabilities
- Self-priming with strong suction
- Shear-sensitive handling
- Consistent flow rate independent of pressure
- Low linear speed
- Precise dosing
- Accurate volume metering with high turn down
- Dry-run capable
- Maintains performance over time
- Effective with both high and low-viscosity fluids
- Full drainability
- Clean-In-Place (CIP)/Sanitize-In-Place (SIP)
- Easy integration

- Simplest positive displacement pump to clean out of place in the industry, including sanitary applications requiring quick and easy dismantling (Up to 12 m³/hr/52 gpm)

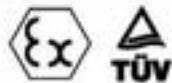

## SLC Series:

- Features a unique seal-less design with FKM bellow
- Simplest positive displacement pump to clean out of place in the industry, including sanitary applications requiring quick and easy dismantling (Up to 12 m³/hr/52 gpm)

(\* In Process)

S Series: S6 Eccentric Disc Pump

## A Series

The A Series Eccentric Disc Pumps have been designed to easily adapt to liquids that are viscous, non-lubricating, volatile or delicate. A Series pumps can meet these challenges through their eccentric disc design, which results in exceptional self-priming and pipe-clearing capabilities, even when running dry.

A Series: A31  
Eccentric Disc Pump

## Applications

- Detergents
- Tallow
- Glues
- Asphalt
- Inks
- Emulsions
- Thermal fluids
- Paint
- Fuel
- Molasses
- Heavy fuel oil
- Oils
- Fatty substances
- Solvents

## Features and Benefits:

- Highly efficient
- Exceptional self-priming capabilities
- Maintain initial performance levels over time
- No adjustments required
- Constant output flows independent of delivery pressure
- Excellent efficiency
- Durable
- Maintains constant output
- Transfers viscous, non-lubricating, volatile or delicate fluids
- Smooth transfer
- Maintains initial performance

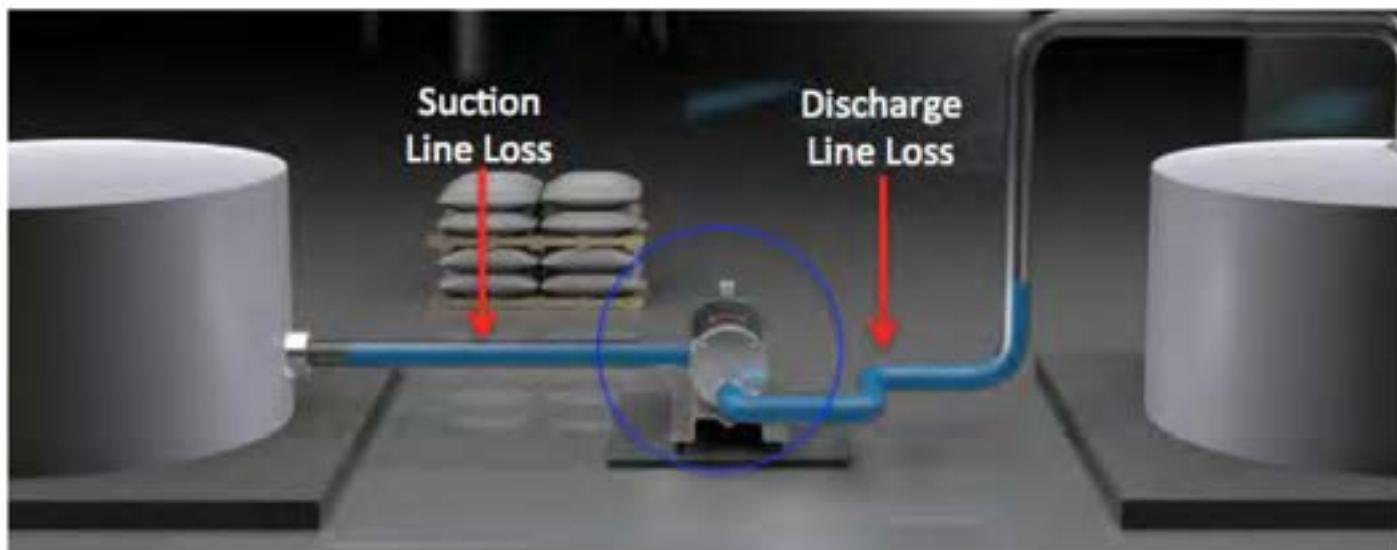

## Technical Data:

- Ductile iron construction
- Optional jacketed head available
- Capable of operating in either direction of rotation

## Performance Data:

- Max. flow rate: 50 m<sup>3</sup>/hr (220 gpm)
- Max. suction lift: 8 m (26 ft)
- Max. differential pressure: 10 bar (145 psig)
- Max. temperature: 80°C (176°F)

## Certifications & Associations:

## CC20 Tank Truck Series

The CC20 Metering Pump is an ideal solution for filling and emptying road tankers, due to its vehicle-mounted design. This multi-purpose application also enables it to be used as a stationary unit.

### Applications

- Waste oil
- Resins
- Fuels
- Soda
- Solvents
- Petrol
- Silicates
- Crude oil
- Syrup
- Emulsions
- Paraffin
- Lubricants
- Inks
- Adhesives

### Features and Benefits:

- Total draining of hoses
- Simple installation
- Compact
- Reduced weight
- Excellent self-priming capacity
- Constant and smooth delivery

### Technical Data:

- Cast iron, aluminium, steel and bronze construction
- Special "solvents" construction
- Safety bypass integrated

### Performance Data:

- Max. flow rate: 30 m<sup>3</sup>/hr (132 gpm)
- Max. viscosity: 750 cSt
- Max. rotation speed: 750 rpm

### Certifications & Associations:

CC20 Series  
Eccentric Disc Pump

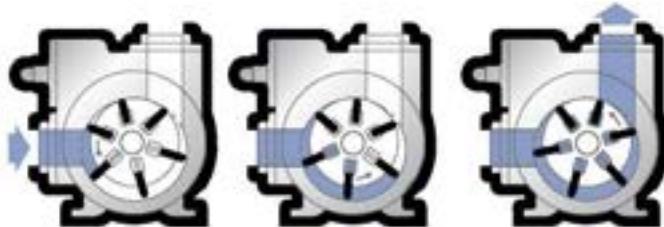

## OVERVIEW

## Vane Technology: How It Works

Sliding vane pumps have a number of vanes that are free to slide into or out of slots in the pump rotor. When the pump driver turns the rotor, centrifugal force, rods, and/or pressurized fluid causes the vanes to move outward in their slots and bear against the inner bore of the pump casing forming pumping chambers. As the rotor revolves, fluid flows into the area between the vanes (pumping chambers) when they pass the suction port.

This fluid is transported around the pump casing until the discharge port is reached. At this point the fluid is squeezed out into the discharge piping. Each revolution of a sliding vane pump displaces a constant volume of fluid. Variance in pressure has minimal effect. Energy-wasting turbulence and slippage are minimized and high volumetric efficiency is maintained.

## Key Design Benefits

Sliding vane pumps are designed with unique "self-adjusting" vanes that allow them to maintain near original volumetric performance during the life of the pump — meaning these pumps are not subject to efficiency-robbing slip that occurs from wear in gear and lobe pumps. In addition, vane pumps are designed around the bearings and seals, so they offer longer life and greater product loss prevention than other technologies.

**SLIDING VANES:** Nonmetallic composite vanes that automatically adjust clearances to allow the pump to sustain consistent volumetric performance while also offering exceptional suction and dry priming capabilities.

**CAVITATION/NOISE SUPPRESSION LINER:** This unique feature, patented by Blackmer, a global leader in vane pump technology, minimizes the effects of cavitation on the pump and piping system while at the same time reducing noise levels up to 15 dbA.

In recent years, advances in traditional vane technology have resulted in even greater performance capabilities, longer service life and a wider range of process applications.

## INDUSTRIAL & PROCESS

### Industrial & Process Sliding Vane Pumps

Many of the chemicals used in industrial process applications are difficult to handle, often toxic or corrosive in nature, difficult to seal and expensive to purchase. Blackmer's sliding vane pumps are available in compatible materials with shaft sealing and seal-less options that make them the products of choice for many process applications.

#### Applications

- Acids
- General chemicals
- CO<sub>2</sub>
- Paints, inks and coatings
- Solvents
- Refrigerants
- Soaps and detergents
- Diesel Exhaust Fluid (DEF)

#### Features and Benefits:

- Designed for specific process and transfer applications
- Highly efficient sliding vane technology
- Self-adjusting vanes sustain performance
- Self-priming, line stripping and dry-run capabilities
- Ideal for thin or non-lubricating, viscous, abrasive and shear-sensitive fluids
- Seal-less and mechanically sealed designs available
- Reduced energy consumption
- Reduced costs
- Sustained performance
- Consistent flow
- Handles thin or non-lubricating, viscous, abrasive and shear-sensitive fluids
- High volumetric efficiency

#### Technical Data:

- Cast iron, ductile iron and stainless steel models available
- Sizes: 19mm (3/4 in.) to 254mm (10 in.)
- Max. working pressures: 17.2 bar (250 psi)
- Max. temperatures: 266° C (500° F)
- Viscosities to >21,000 cSt (100,000 SSU)
- Motor speed and gear reducer drives

#### Performance Data

- Max. flow: 8,404 L/min (2,220 gpm)
- Max. differential pressure: 13.8 bar (200 psi)

#### Certifications & Associations:

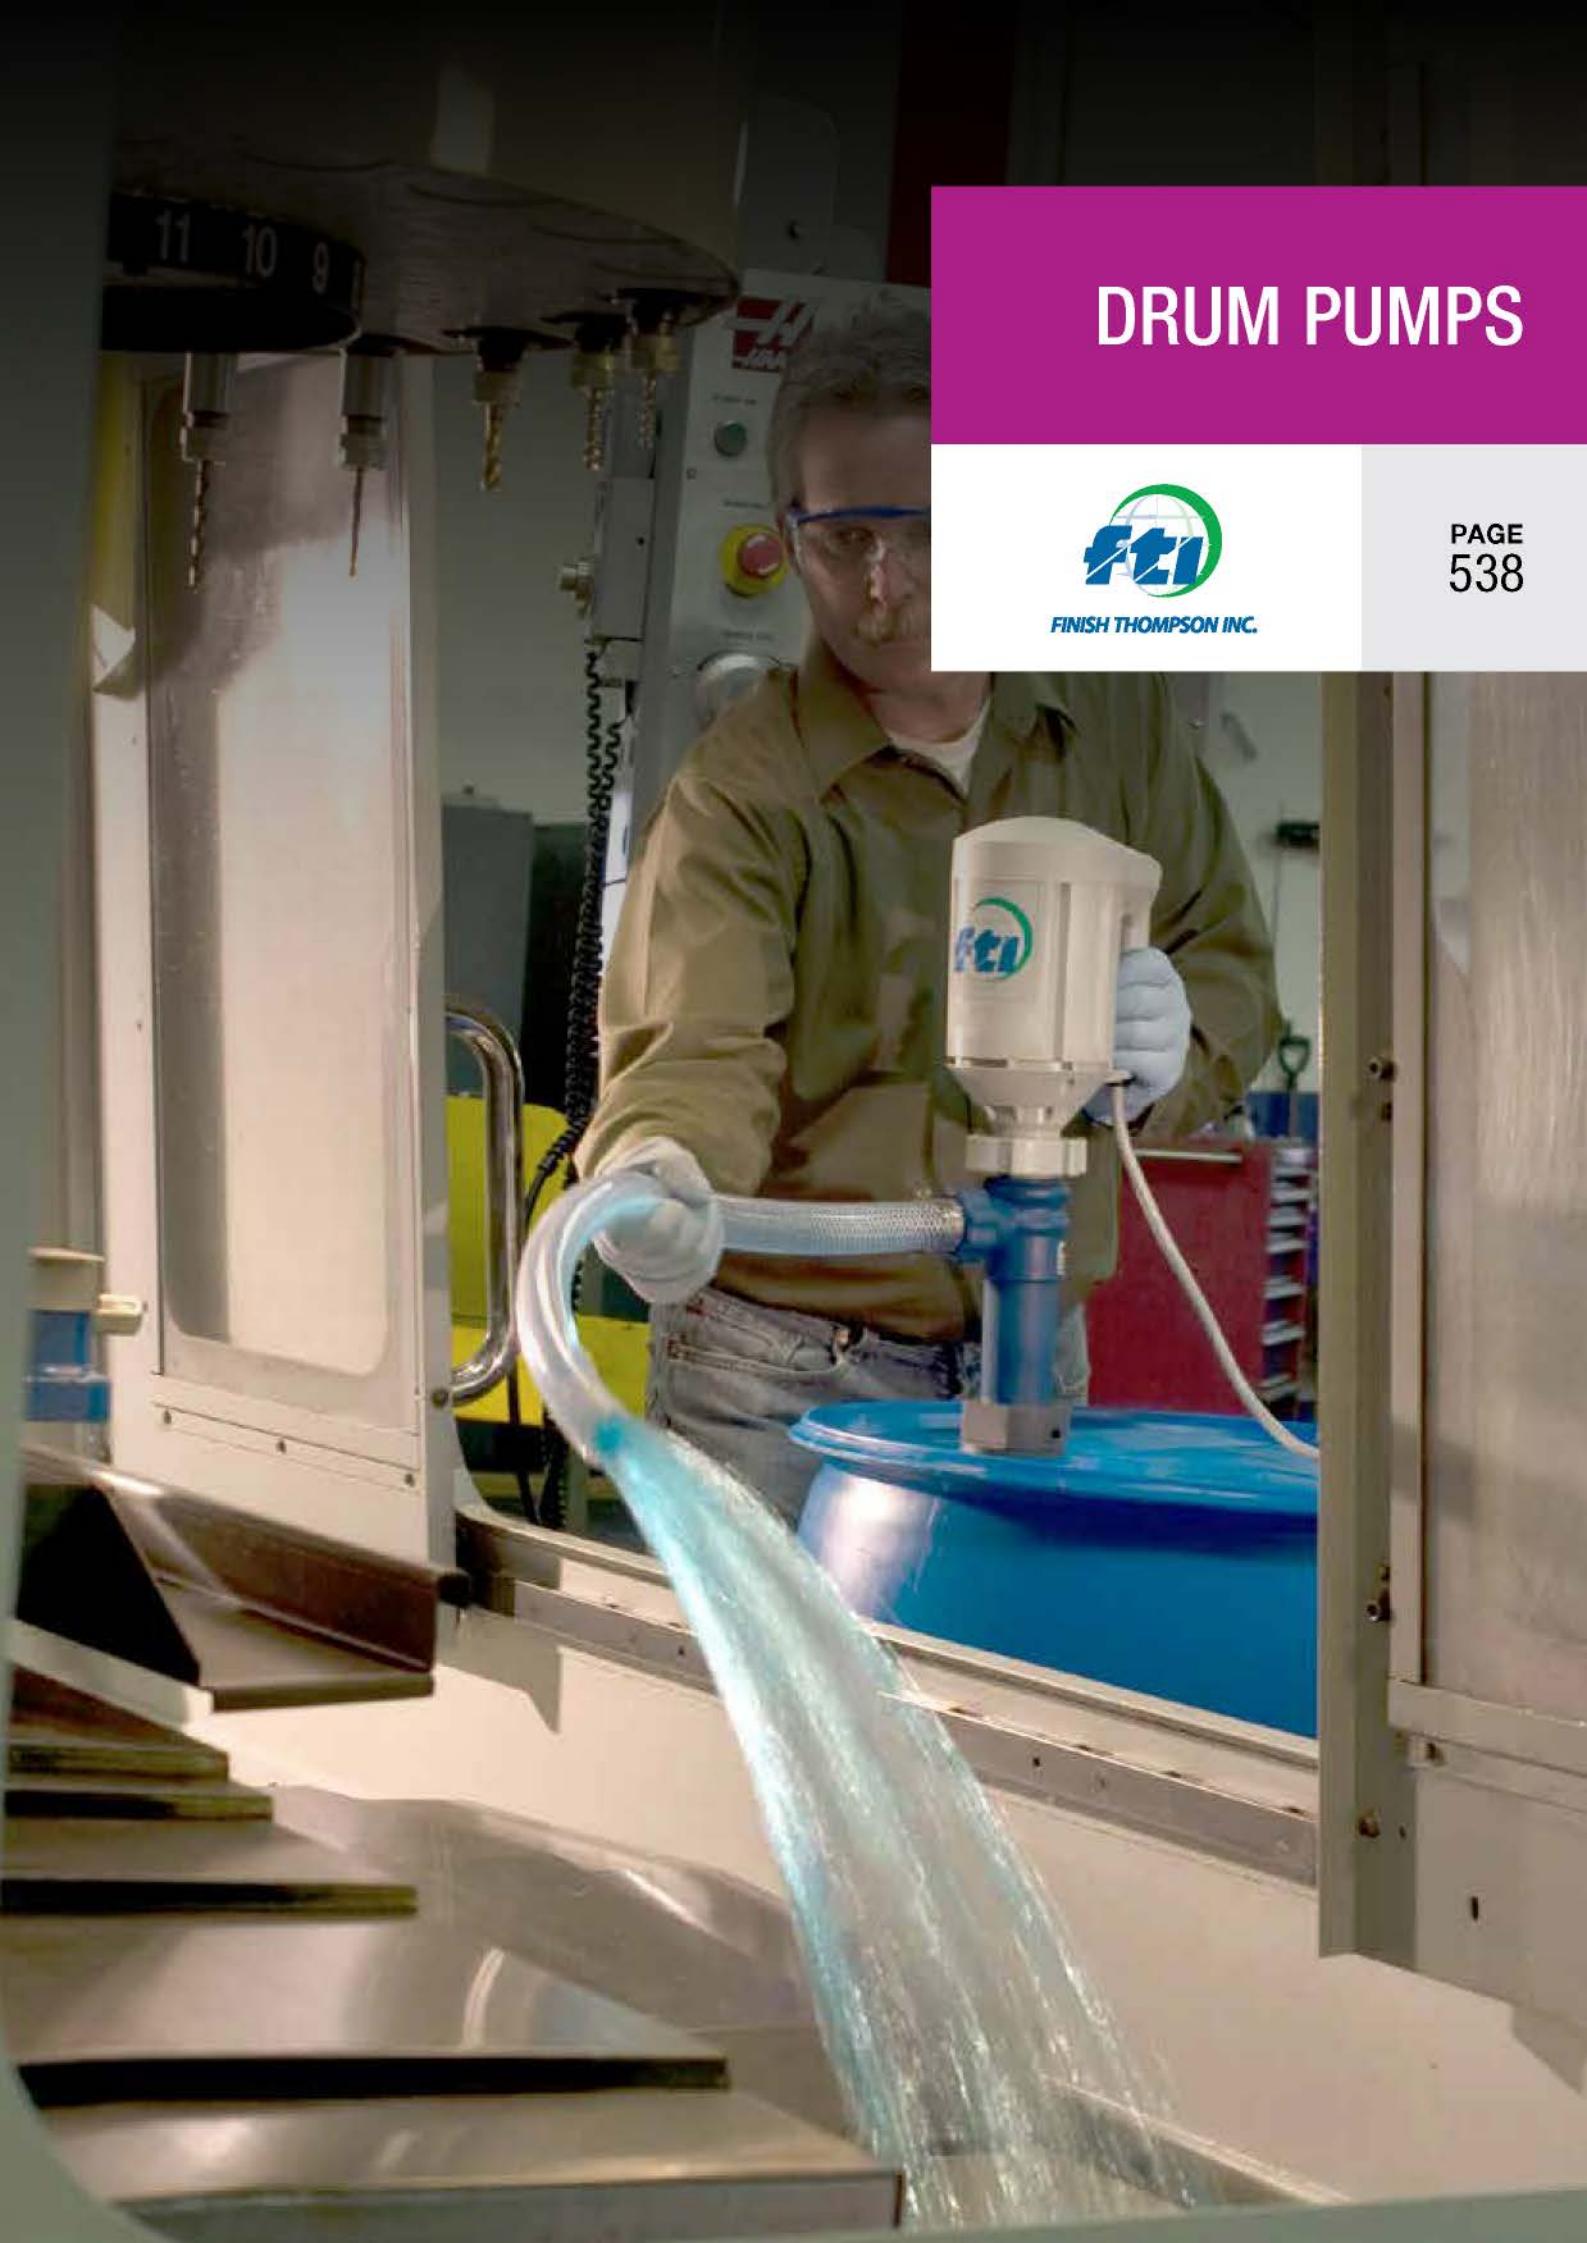

# DRUM PUMPS

FINISH THOMPSON INC.

PAGE  
538

## Finish Thompson Drum Pumps

Drum pumps are used to pump liquid out of drums, totes and IBC's. Drum pumps normally consist of an air or electric motor and a long, thin pump tube which can be inserted into a 2" drum opening.

Drum pumps can be used for pumping a wide variety of thin and thick liquids including acids, chemicals, polymers, oils, and food manufacturing ingredients. Safe, easy, portable and practical way to transfer a wide variety of liquids that are stored in a drum, tote or IBC. Drum pumps are normally supplied as centrifugal pumps, however positive displacement pumps are available for pumping thicker liquids. Stainless Steel pumps are also available for food applications.

Note: Maximum viscosity can vary by pump series.

\* Motor suitable for hazardous areas that do not require independent certification.

\*\* An air motor is a non-electrical device which means the possibility of explosion from igniting flammables or combustibles is reduced. Air motor performance will depend upon user's compressor and system setup.

† M6A/M6XA motor models only are ATEX certified. M6/M6X models are CE certified. † Maximum viscosity for PF Series is 330 cP.

## Flow Meters

- Dispense precise amount of fluids from containers.
- Handles chemicals and corrosive liquids.
- Large LCD display in GPM or LPM, 20 cP maximum +/-1% accuracy and repeatability.
- All models are factory calibrated.
- Some models may be field calibrated.
- Batch control versions available.
- Corrosion resistant polypropylene or PVDF.
- Engineered connections for fast assembly to PFM, PFP and PFV drum pumps.

## Air Hose

15 feet (4.6m) air hose assembly sold separately.

## Discharge Tubing

Flexible tubing connects to the pump discharge. Available in PVC, reinforced PVC and special EPDM for Diesel Exhaust Fluid applications.

## Nozzles

Nozzles provide a convenient way to control liquid flow. Available in polypropylene, aluminium and stainless steel.

## ACCESSORIES

## Drum Adapters

Secures the pump tube in the barrel's bung opening. Fits standard 2" IPS bung opening. Available in polypropylene, galvanised or stainless steel.

## Filter/ Lubricator Assembly

Conditions compressed air by removing free moisture and solids. Also lubricates the air for longer air motor life.

## Strainers

Strainers attach to pump tubes preventing foreign objects from entering the pump.

## Static Protection Kit

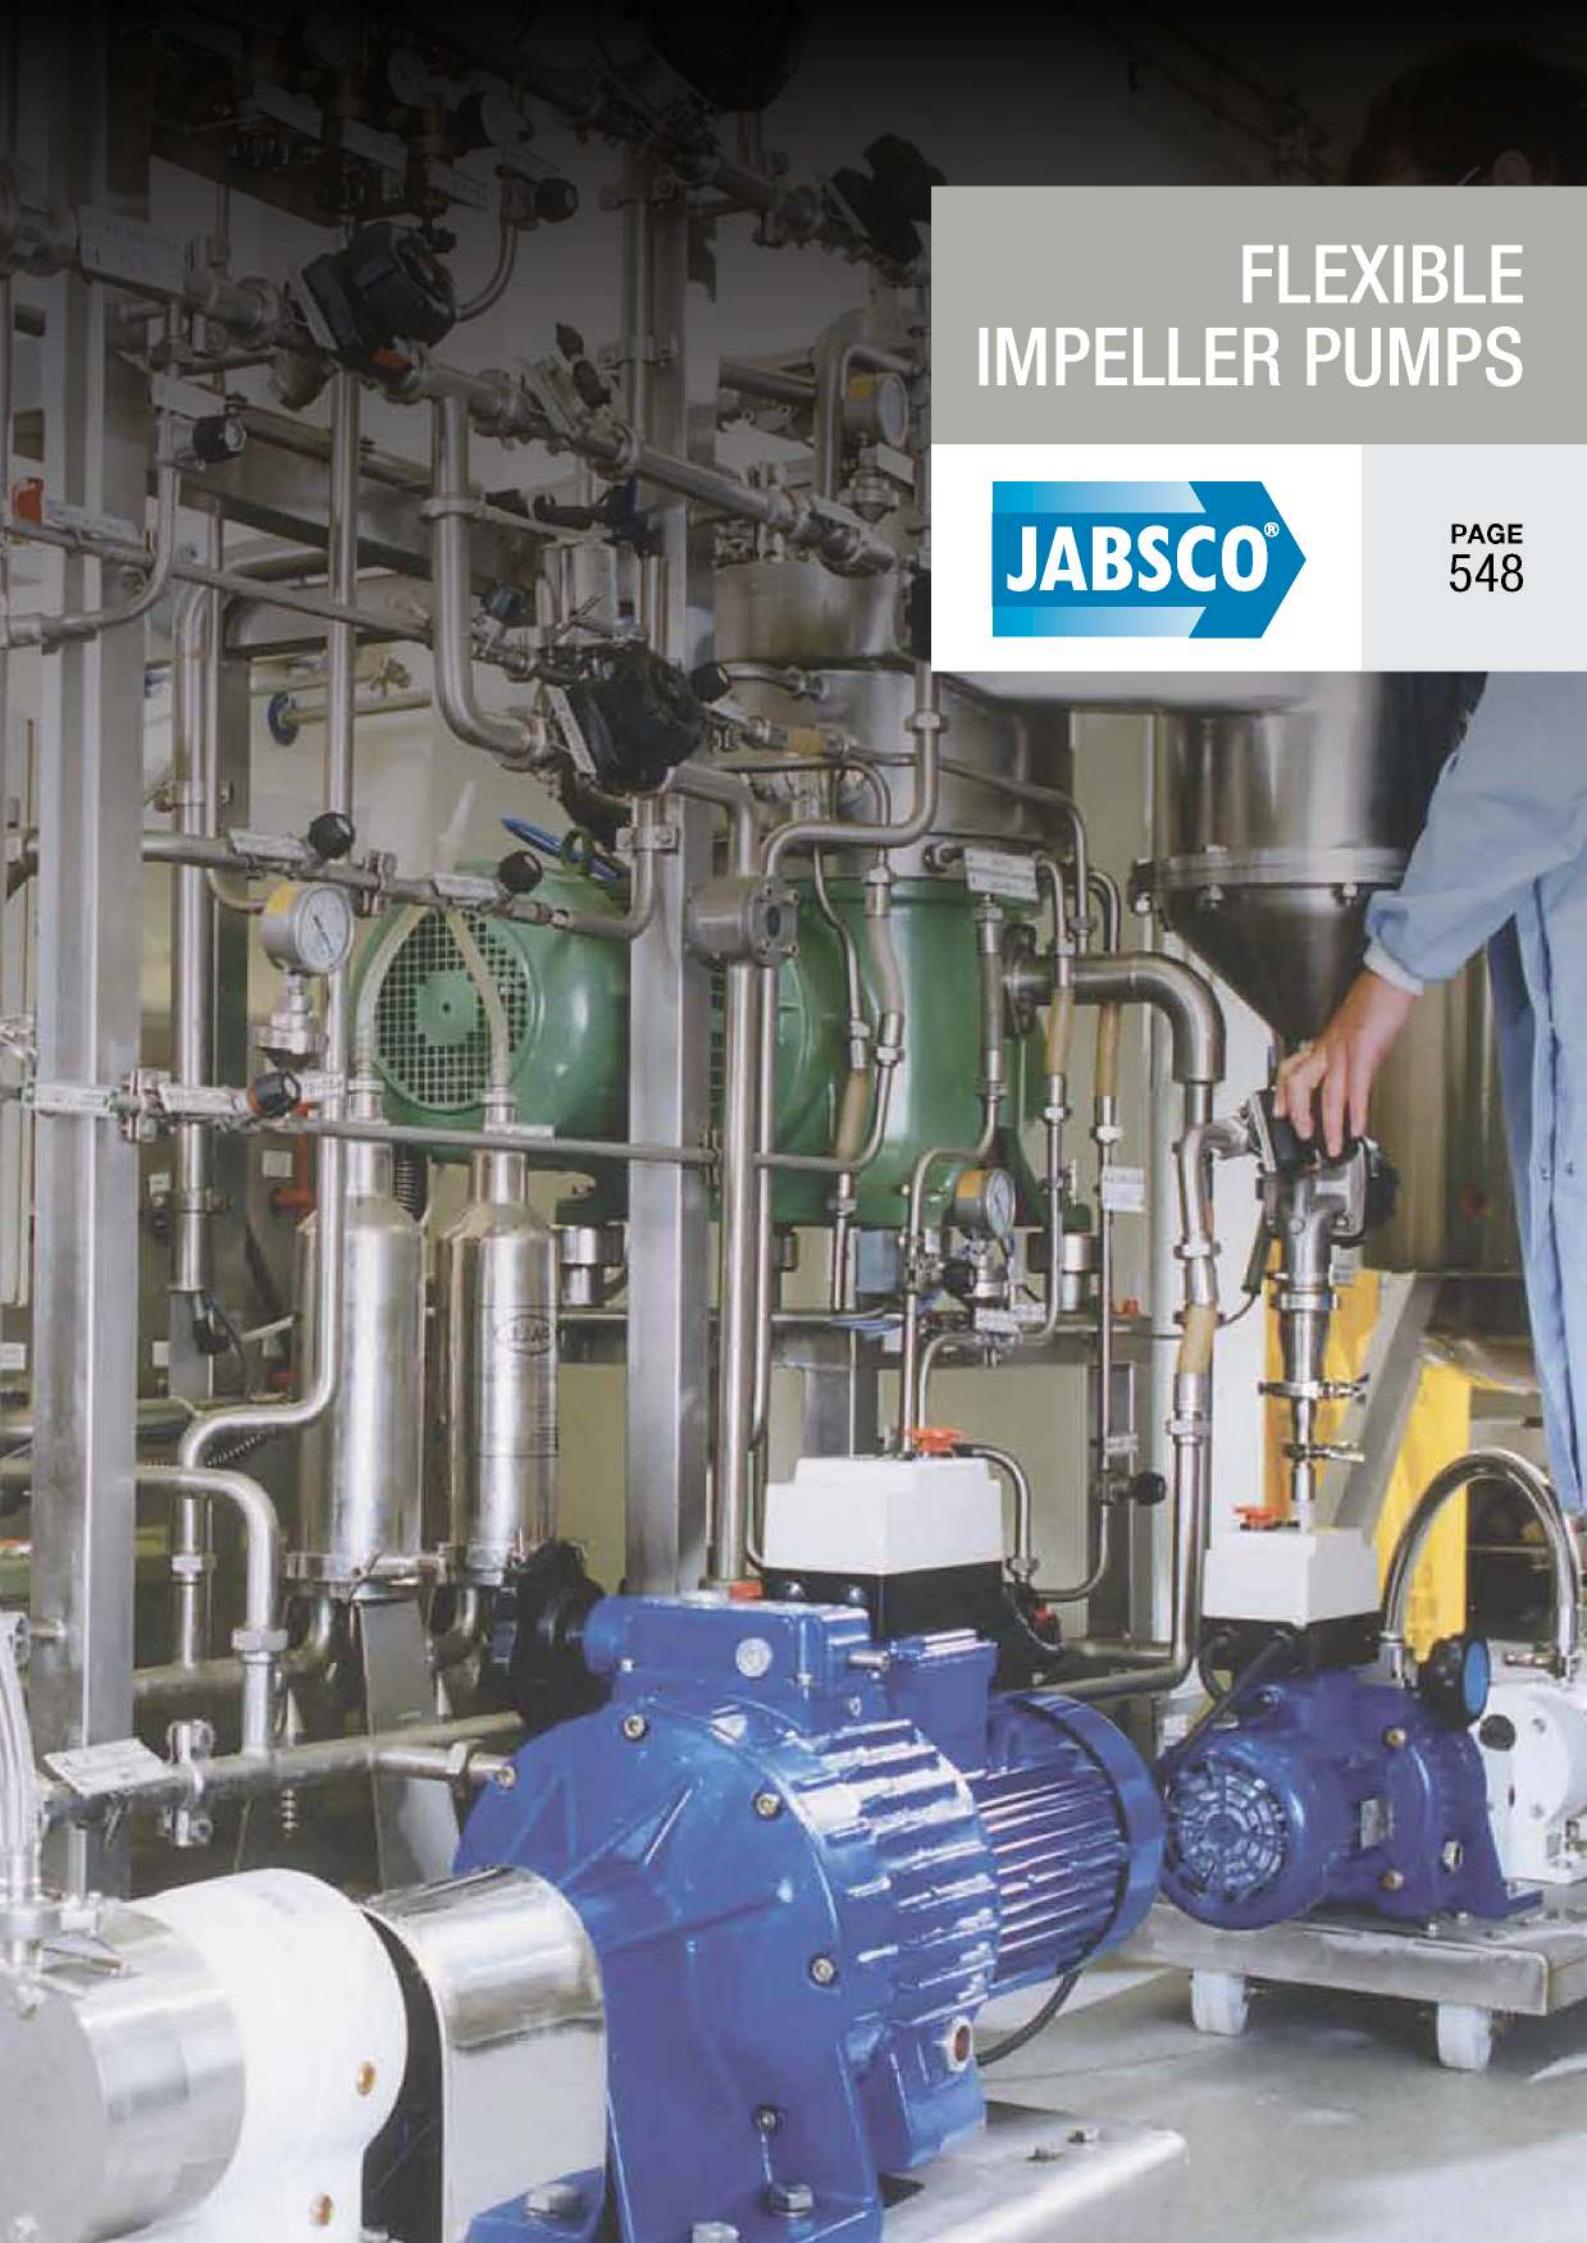

Increases safety when transferring flammable or combustible liquids. Kit includes cross-linked polyethylene grounded hose, ground wire and clamps.

## Wall Mount Bracket

Allows pump to be stored in an upright position.

A large industrial pump system is shown in a factory setting. It features a complex network of stainless steel pipes, valves, and fittings. In the foreground, two blue electric motor-pump units are mounted on a metal frame. A person's hand is visible on the right side, interacting with a component of the system. The background shows more industrial equipment and piping.

# FLEXIBLE IMPELLER PUMPS

JABSCO®

PAGE  
548

Flexible impeller pumps are a type of rotary positive displacement pump that has a rotating rubber impeller with vanes that bend and then straighten as the impeller rotates to conform to the internal cam in the pump casing.

## Typical Applications:

Water, seawater and other thin to medium viscosity liquids. Flexible impeller pumps are ideally suited for use in food applications such as milk or chocolate transfer applications.

## Features & Benefits:

- Economical option to move liquids containing some solids
- Smooth gentle, low shear pumping action
- Self-primes quickly from a dry or wet start

**(1) Inlet**

On start-up, air in the inlet pipe is displaced and liquid is drawn into pump.

**(2) Displacement**

The liquid is then carried through to be discharged at a steady flow rate.

**(3) Discharge**

This action combines gentle pumping with true dry priming capability.

## Options

### Pedestal Pumps

- Foot-mounted to couple to gearbox or belt-drive
- Hygienic rubber impeller
- Long-life mechanical shaft seal
- All 316 grade Stainless Steel parts with high surface finish
- Used in Food, Dairy, Beverage, Healthcare & Cosmetics sectors

### Motor Mount Pumps

- Used in Food, Dairy, Beverage, Healthcare & Cosmetics sectors
- Close-coupled to motor (unibloc); compact and economical
- Suitable for mounting onto standard IEC or NEMA motors
- Hygienic rubber impeller
- Long-life mechanical shaft seal
- All 316 grade Stainless Steel parts with high surface finish

## Flexible Impeller Hygienic Positive Displacement Pump

Jabsco Hygienic Flexible Impeller Pumps handle low and high-viscosity liquids, gels and pastes and can pass suspended soft and hard solids with minimal damage. The output flow is smooth, steady and totally pulsation-free and their gentle pumping action will not break down shear-sensitive or fragile liquids. Designed to be cleaned in place or easily strip-cleaned, Jabsco flexible impeller pumps frequently offer a more suitable and cost-effective alternative to many other pump types.

### Milk Tanker Pumps

- Specialised pumps for Milk Tanker loading at dairy farms
- Bulkhead mounted for hydraulic drive
- Quick-release end-cover for winter drain-down and inspection
- By-pass option for effective CIP without the need to run the pump
- Hygienic rubber impeller

## Design Features

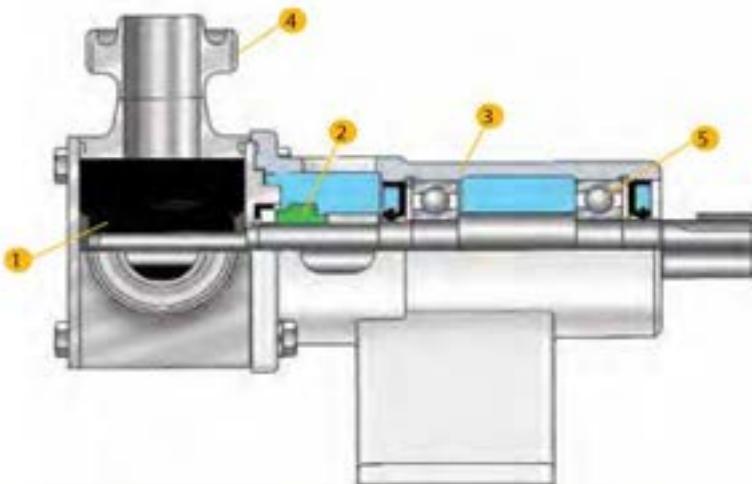

- Dry self priming
- All 316 Stainless Steel parts with high surface finish
- Hygienic rubber impeller leaves no taste or odour
- Elastomers Certified to US 3A Standard 18-03
- Pump certified to US 3A Standard 02-10
- Long-life mechanical shaft seal
- Easy strip-to-clean
- USDA Approved
- Variety of port and impeller material options
- Chemical-resistant 316 Stainless Steel parts
- Rugged heavy-duty construction
- Replaceable wearplates
- Passes even hard metal particles without stalling
- Long-life mechanical shaft seal
- Variety of shaft seal options
- 3A Variants - Must be specified with HYG Neoprene or EPDM.
- Port Options - Tri-Clamp, IDF, 3A, DIN 11851

## Construction Details

- 1 Food grade rubber impeller available in Neoprene, EPDM and Nitrile options which fully conform to today's stringent hygienic standards.
- 2 Wide variety of long-life interchangeable seal types to suit many applications makes service & maintenance easy.
- 3 Choice of head kit or pedestal bearing housing satisfies the individual's requirement for unification. On larger models, bulkhead mounted pumps are available if the option of fitting to hydraulic drive is required.
- 4 Range of port options for maximum flexibility.
- 5 Long life, high specification bearings give over 1 million hours life on a typical duty.

## Flexible Impeller Compounds

- 1 NEOPRENE is the standard impeller material used in most flexible impeller pumps. It offers a wide range of chemical resistant properties. Temperature range: 45°F (7.2°C) to 180°F (82.2°C).
- 2 NITRILE impellers offer compatibility with oil products. It handles a wide range of oils, oil and water emulsions, diesel fuel, lower fraction hydrocarbons, kerosene, lubricating and machine cutting oil. Lower temperatures affect priming ability and performance characteristics. Generally, nitrile performance is 10% below that of neoprene. Temperature range: 50°F (10°C) to 180°F (82.2°C).
- 3 VITON impellers are recommended when pumping hydrocarbons, solvents and severely corrosive chemicals. Viton is not recommended for low temperature or high pressure applications. Temperature range: 60°F (15.6°C) to 180°F (82.2°C).
- 4 SANITARY NEOPRENE impellers are used in hygienic flexible impeller pumps for applications pumping food, beverage and pharmaceutical products. Temperature range: 45°F (7.2°C) to 165°F (73.9°C).
- 5 NATURAL RUBBER impellers are used in cold water applications. Temperature range: 22°F (-5.6°C) to 120°F (48.9°C).
- 6 SANITARY EPDM impellers are used for elevated temperature hygienic applications to 185°F (85°C). EPDM is compatible with some ketone solvents. Temperature range: 60°F (15.6°C) to 185°F (85°C).

**JABSCO** 282 SERIES

## Features

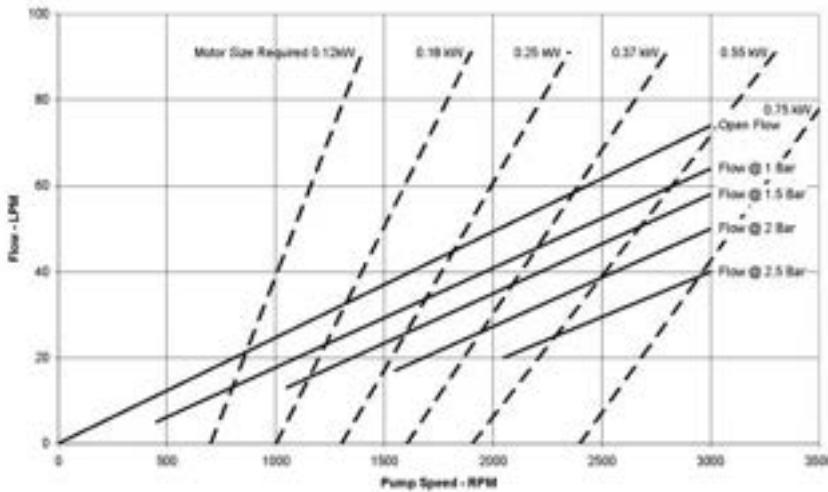

- Self primes from dry up to 16.4 ft (5.0 m)
- Flows up to 52.8 GPM (200 LPM)
- Pressure up to 58 psi (4.0 bar)
- Handles soft solids - Max. 0.63" (16mm) diameter
- Certified to US 3A Standard 02-10
- Clean-In-Place (CIP) or easy strip clean
- Handles viscosities up to 50,000 centipoise
- Minimal shear to thixotropic fluids
- Fits IEC standard motor B3/B14, frame 90 (model 28420)
- Easy to service and maintain

### SPECIFICATIONS

Seal	Carbon / Ceramic mechanical face seal Tungsten Carbide / Ceramic hard faced seal Flushed options for crystallising fluids
Seal Elastomer	Food grade Nitrile
Pump Head	Stainless steel 316, machined interior and electropolished exterior finish
End Cover	Stainless Steel 316 grade
Shaft	Stainless Steel 316 grade
Shaft	Stainless steel 316 grade (Model 28400)
Bearings	- Greased ball bearings (Model 28400) - Uses motor bearings (Model 28420)

Digital dosing pumps from 0.0025 to 30 l/h

### Digital Dosing

The SMART Digital generation DDA, DDC and DDE with powerful variable-speed stepper motor brings state-of-the-art technology to perfection. Combined expert knowledge and the new patented solutions set future standards. Traditional technologies such as stroke length/stroke frequency adjustment with synchronous motor or solenoid drive become a thing of the past.

### Unique flexibility with only a few variants

The included click-stop mounting plate makes the new pump more flexible. Three different positions are possible without using any additional accessories. Service and pump exchange can now be done easily and fast by just clicking the pump in and out of the mounting plate. The control cube on the DDA and DDC pump can be easily turned into three different positions.

A turn-down ratio of up to 1:3000, a wide supply voltage range (100-240 V, 50/60 Hz), combined connection sets and other features reduce the models and variants to a minimum.

### Precise and easy setting

The operator can easily install the pump and set it to discharge exactly the quantity of dosing liquid required for the application. In the display, the setting of the pump is read out directly, the flow is shown in ml/h, l/h, or gph.

The click wheel and the graphical LC display with plain-text menu in more than 25 languages make commissioning and operation intuitive. As the LCD is backlit in different colours, the pump status can be seen from a distance.

Thanks to a variety of operation modes, signal inputs and outputs, the pump can easily be integrated into every process.

### Advanced process reliability

An intelligent drive and microprocessor control ensure that dosing is performed precisely and with low pulsation, even if the pump is dosing high-viscosity or degassing liquids. Malfunctions are detected quickly by the maintenance-free FlowControl system and then displayed in the alarm menu. The AutoFlowAdapt function automatically adjusts the pump according to the process conditions, e.g. varying backpressure. The integrated flow measurement makes additional monitoring and control equipment redundant.

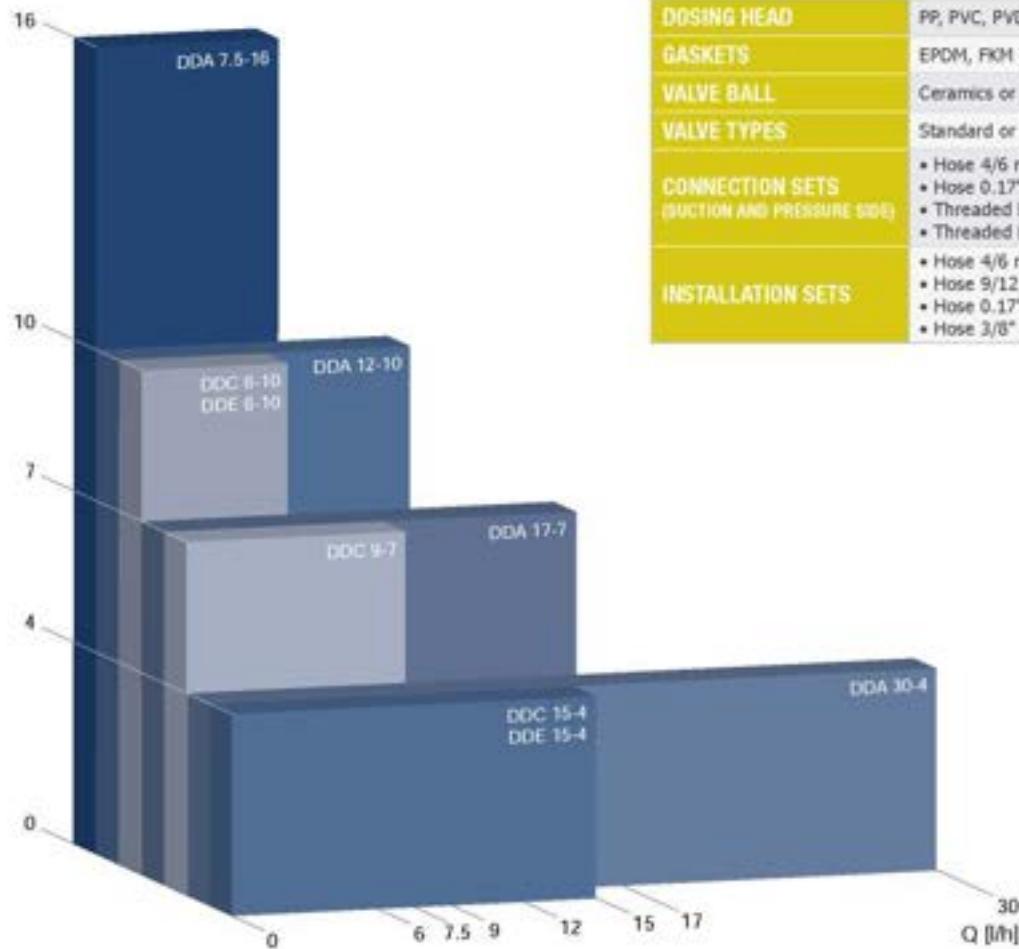

### Designed to save costs

In general, the investment for a dosing pump installation is low compared to its life cycle costs, including the cost of the chemicals. The following features make the SMART Digital DDA, DDC and DDE pumps contribute to low life cycle costs:

- No underdosing or overdosing due to high dosing accuracy and FlowControl
- Longer maintenance intervals thanks to the universal chemical resistance of the full-PTFE diaphragm
- Reduced energy consumption thanks to state-of-the-art drive technology

## DME SERIES DOSING PUMPS

**Digital Dosing™ up to 150 l/h**

By popular demand, we have applied innovative technology to expand the Digital Dosing™ pump range, allowing it to handle liquids in much larger quantities. With just two models the new DME range can cover the range from 75 ml/h to 150 l/h. Perfect for large water and wastewater treatment plants, textile industries, pulp and paper industries, and many other demanding applications, the new, large DME pumps bring the benefits of Digital Dosing™ to a new circle of users worldwide.

### Familiar Digital Dosing™ benefits

The 60 – 150 l/h pump range has all the benefits of the highly acclaimed smaller Digital Dosing™ range, making exact dosing easier than ever.

### Easy-to-use digital user interface

The simple display allows everyone to be their own dosing specialist. With just a few buttons, you can navigate the straightforward menus to use the impressive range of standard control features – including pulse, analog, timer, batch, and anti-cavitation control – as well as simple calibration and much more.

### Turndown ratio 1:800

With a turndown ratio ten times better than that of traditional equipment, the large Digital Dosing™ pumps give you greater flexibility and accuracy than ever. Only two pump sizes cover the range from 75 ml/h – 150 l/h.

### Full stroke length at all times

Grundfos Alldos is the only pump manufacturer to use a full stroke length every time. The strokes are carefully timed, ensuring even concentration in the system and optimal priming throughout the entire operating range.

### Brushless DC motor ensures full control

The ingenious design of the large Digital Dosing™ pumps eliminates the need for a servo motor/frequency converter and ensures smooth and gentle dosing.

### Anti-cavitation

Turndown of the suction stroke to 75%, 50% or 25% of the maximum speed ensuring optimal priming and displacement of even the most difficult liquids.

### Fieldbus communication available

Available with Profibus interface to supply performance data and status information for quality control, preventative maintenance and future reference.

### Overload protection

Built-in overload protection monitors pump counter pressure and protects against exceptionally high pressure loads.

### Switch-mode power supply

The switch-mode power supply ensures that the Digital Dosing™ pumps can be used worldwide within the 100–240VAC – 50/60Hz range.

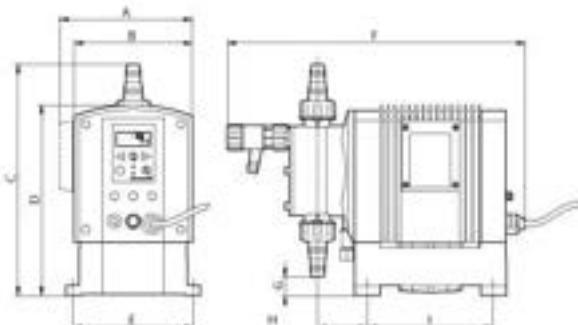

### Several material variants

The DME pump heads are available in stainless steel, PVDF, and environmentally friendly, cost-efficient polypropylene.

## DME SERIES DOSING PUMPS

**Digital Dosing™ up to 940 l/h**

By popular demand, we have applied innovative technology to expand the Digital Dosing™ pump range, allowing it to handle liquids in much larger quantities. With just two models the new DME range can cover the range from 0.47 l/h to 940 l/h. Perfect for large water and wastewater treatment plants, textile industries, pulp and paper industries, and many other demanding applications, the new, large DME pumps bring the benefits of Digital Dosing™ to a new circle of users worldwide.

### Familiar Digital Dosing™ benefits

The DME375 – DME940 l/h pump range has all the benefits of the highly acclaimed smaller Digital Dosing™ range, making exact dosing easier than ever.

### Easy-to-use digital user interface

The simple display allows everyone to be their own dosing specialist. ## Compact Dosing Stations

### Storage and Dosing of Liquid Chemicals

Grundfos are manufacturers of the most advanced chemical dosing pumps in the world. Combined with a perfectly matched pump accessories range they can be used to create dosing systems. DSB dosing stations are the simplest and most compact complete systems. Designed to draw chemical direct from small drums or an on-board storage tank, the system covers all components from chemical drum to the injection valve. Everything laid out in the most convenient and efficient manner ready for operation.

### Components and Features

- Chemical resistant tanks made of UV stabilised polyethylene. In sizes 40, 60 and 100 litres, with embossed litre scale and PE screw on lid.
- PE containment bund (L515 x W550 x H840mm)
- Flexible foot valve with or without 2-level float switch for process protection.
- Chemical pumps from our Smart Digital DDA range.
- Injection valve ½"BSPP & 6m of 6/9 PE tubing rated to 12 bar.
- PVDF fixed pressure loading valve.
- Signal input control and output alarm cables. DSB dosing stations are semi assembled. Foot valve fitted to tank and pump mount plate bolted to tank or bund. Basic connection of the pump, tubing connections and signal cables are required.

### Applications

- Water treatment chemical disinfection
- pH correction
- Biocides, anti-scalants and corrosion inhibitors
- Coagulants for waste water.
- CIP disinfection.

## Dosing Station DSU

### Storage and Dosing of Liquid Chemicals

Grundfos has a renowned reputation for designing and manufacturing high quality dosing pumps and accessories, and the Dosing Station DSU is no exception. Made from high quality materials, this compact, traditional style dosing station is capable of storing and dosing a wide range of liquid chemicals. The bunded station features low pump mounting and can be calibrated online for added convenience.

## Product Overview

- Pallet base LDPE containment bund with sump and drain valve
- Translucent LLDPE tanks available in 200 & 500 L
- Chemical pumps from our Smart Digital DDA/DDI range up to 60 L/hr
- Calibration column for on-line calibration
- Suction manifold in rigid grey uPVC pipe fitting
- In-line suction strainer
- Isolation ball valves for duty/standby selection
- Pressure loading & relief valves
- Signal cables & junction box
- Chemical level float switch
- Manual to automated control modes
- Injection valve and 10 m of hose

## Applications

- Water treatment chemical disinfection
- Biocides, anti-scalants and corrosion inhibitors
- Coagulants for waste water
- CIP Disinfection
- pH Correction

## Features

### Complete package

- Supplied with complete set of accessories

### Easy installation

- The compact, preassembled and tested design means minimised installation—just plug & play

### Versatile

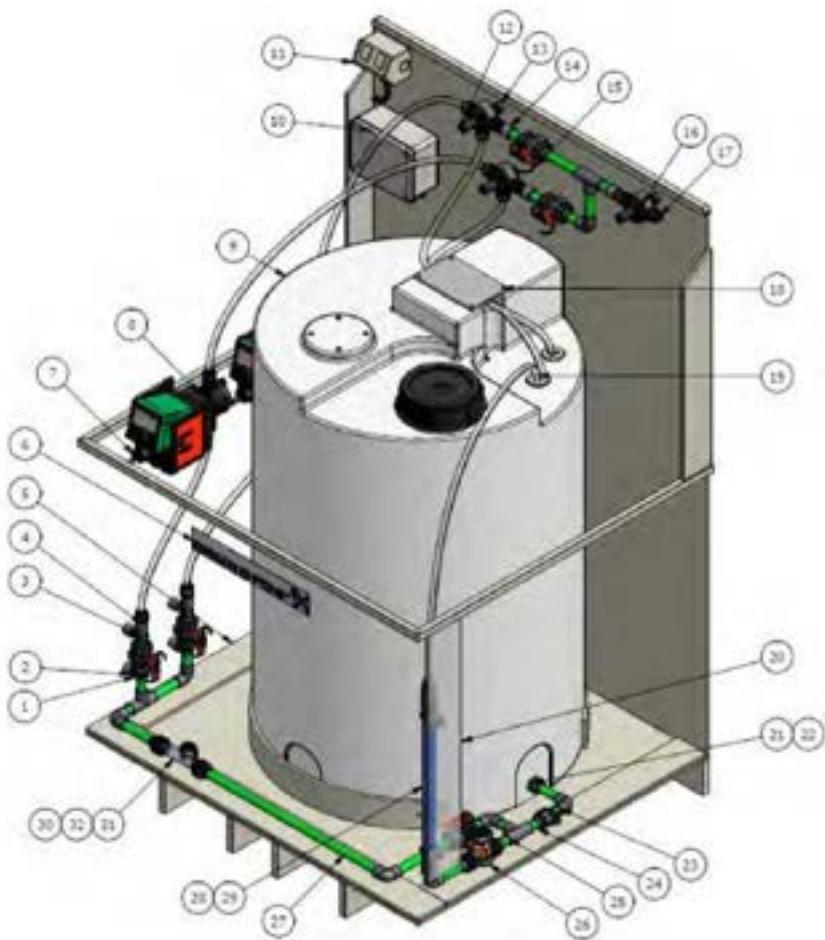

- Configurable setup and flexible systems to fit many different applications
- The calibration column allows for easy online calibration
- A wide range of chemical compatibility due to high quality materials
- Flow rates of 2.5 mL/h up to 60 L/h available in the Smart Digital DDA/DDI pump range

### Certified

- Meets Australian standards

## Dosing Standard Skids

### Dosing of Liquid Chemicals

The Grundfos Dosing Standard Skid design is based on years of research into the needs of the water treatment industry. Utilising design data from dosing projects completed over the last five years, the features of the DSS range exceed customer requirements. Grundfos have a complete range of pre-engineered, standard dosing design packages including 3D mechanical and electrical General Arrangements, Bill of Materials and P&ID's, with supporting technical documentation. Each design has its own product code and description ensuring a simple selection process.

DSS incorporates premium componentry at a cost effective price. They maximise the value offered by our industry leading pump technology, which eliminates the requirement for many external accessories and additional instrumentation. They offer large savings on design costs associated with custom built packages.

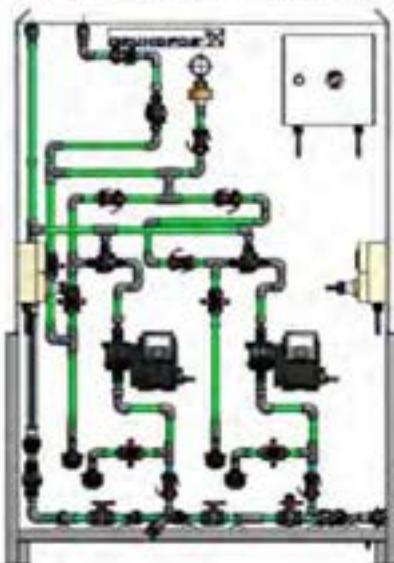

Grundfos in-house production starts as soon as the order is accepted and stock alignment prevents procurement delays or dependency on external suppliers, ensuring a high quality, reliable and individually tested chemical dosing system in an industry leading timeframe.

### Systems, Components & Features

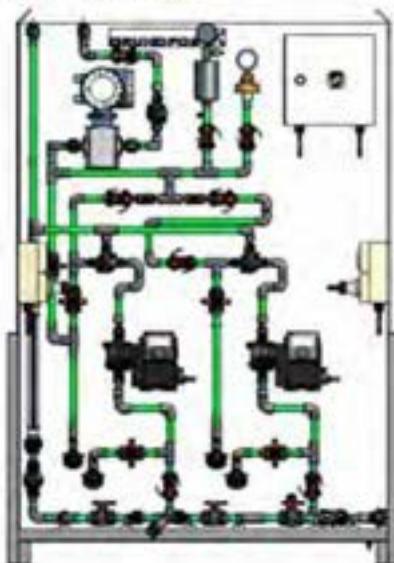

- 160+ standard design models
- Standard Design Layout used throughout: Easy for operators to learn
- Chemical Diaphragm pumps from our Smart Digital and DME Dosing range
- Free standing bare 316SS or powder coated frame with PVC backing board in either an open chair design or fully enclosed cabinet with clear lift in doors
- Calibration cylinder: To test pump settings
- Pressure relief valve on each pump: protects the system from high pressure failure
- PVDF fixed pressure loading valve: Ensures accuracy of the dose rate and prevents chemical siphoning through system
- Manifolded pump selection: uPVC pipe fittings and isolation valves
- Dual suction strainers: Protect the pumps from foreign particulate matter
- Pressure gauge with chemical barrier block
- 4-20mA Flow Output, Signal input control and output alarm cables connected to a termination panel and Emergency Latch Stop

## Standard Variants

Modular options are included in the DSS pricing structure for increased flexibility

Standard Model

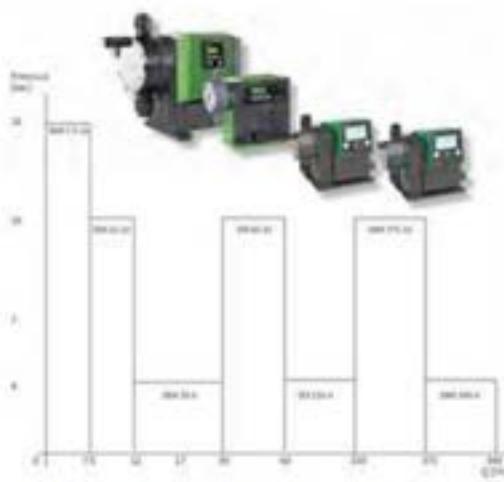

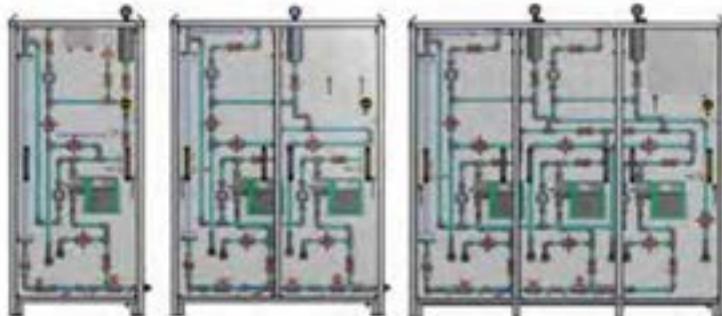

Model with Optional Extras; Flowmeter, Pulsation Dampener, Check Valves & Dilution Line

## Selection Criteria

Select one value from each of the following:

1. Number of pumps per skid – 1, 2 or 3
2. Pump size (Max. L/h) – DDA7.5, DDA12, DDA30, DDI60, DDI150, DME375 or DME940
3. Frame Style – chair or cabinet
4. Chemical group – See table below

GROUP	CHEMICALS	FRAME MATERIAL	SEAL MATERIAL	ISOLATING VALVE TYPE
1	Sodium Hypo, Acids to 96%	PC	Viton	Ball
2	Ammonia, Alum, Anti-scalant	SS	EPDM	Ball
3	Caustic, Soda ash, Copper sulphate	SS	EPDM	Diaphragm
4	Cal. hypo, Ferric/ferrous chloride	PC	Viton	Diaphragm

## Poly Dosing Skids

### Dosing of Liquid Polymers

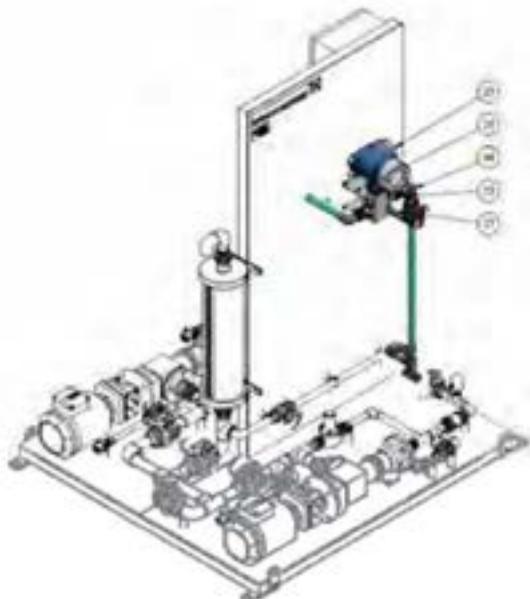

Grundfos Polymer Dosing skids deliver the exact volume of high viscosity polymer into a process water flow. An ergonomic and functional design layout makes operation and servicing simple. Dilution water control with in-line mixer ensures homogenised distribution throughout the process water for maximum efficiency. Grundfos Polymer Dosing skids can be locally controlled from the Polydos HMI touch screen or remotely via the plant PLC. A single multi-core cable connection and PVC union pipe connections make installation simple. The Grundfos Polymer Dosing Skid range is designed to complement Grundfos Polydos Powder and Liquid Polymer Preparation units to create fully integrated systems.

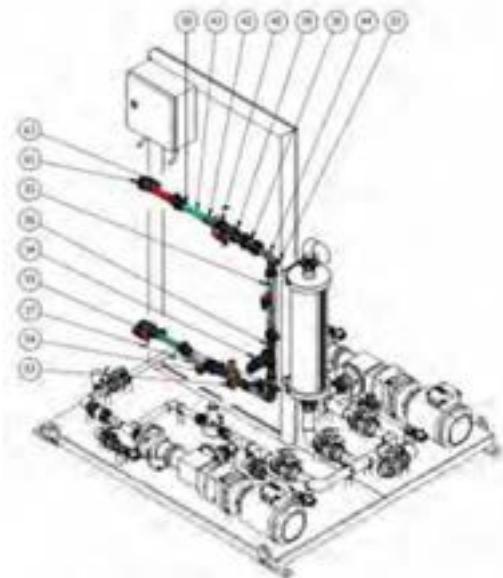

### Components & Features

- 14 standard design models including General Arrangements, Bill of Materials and P&ID's.
- Free standing 316 SS frame with PVC backing board includes lifting lugs and anchor plates
- Progressive Cavity Polymer Dosing pumps
- Flow switch: Low flow alarm for pump protection
- Calibration cylinder: To test pump settings
- Pressure relief valve on each pump: protects the system from high pressure failure.
- Flowmeter: To provide 4-20mA Flow Output
- Schedule 80 Pipework and PN16 Valves, SS316 backing flanges throughout;
- SS316 Asset Labels, and pipework signage to AS1345
- Signal input control & output alarm cables connect to the plant PLC or Polydos control panel with VSD.
- Optional: 4:1 Service Water Dilution system; Solenoid valve, isolation valves, Max. Flow switch, rotameter, pressure regulator and gauge, check valve and static mixer

## Standard Variants

Optional Flowmeter

Optional Service Water Dilution

In response to changing market conditions and customer needs, Grundfos has developed an innovative range of Containerised Solutions – both standard and customised turnkey containerised systems. The current product offering includes:

- Chemical Storage & Dosing Container
- Poly Batching & Dosing Container
- Electrochlorination Container
- Chlorine Dioxide Generator Container
- Chlorine Gas Dosing Container
- Pumping System Container

While Grundfos has long been known for their quality pumps, our reputation is growing in the field of plug-and-play, onsite system solutions. We have the expertise and the production facilities to take ownership of the entire project management process; from design and engineering to installation, commissioning and operator training.

## Product Range Overview

### Chemical Storage & Dosing Container

Container Size: 10 foot & 20 Foot

#### Overview:

A complete chemical storage and dosing system incorporating a full bund and optional thermal protection. The container has space for two Intermediate Bulk Containers (IBC's) providing a storage capacity of 2,000 litres for the relevant chemical. Both IBC's are stored on weigh-scales in a duty/standby configuration for automatic operation. Once the first IBC is empty, the skid suction valve will automatically switch IBC's and raise an alarm at the control system, removing the need for operator intervention.

#### Benefits:

- Reduced requirement for site civil infrastructure: Incorporates full chemical bund and 110% capacity of total storage
- Increased flexibility: Interchangeable between predesigned Dosing Standard Skid (DSS) range, 0-940 L/hr dosing range with 1 to 3 pump configurations and options of a cabinet enclosure
- Chemical compatibility: A range of material selections available to cater for most common chemicals
- Increased safety: Includes various safety features such as an external local stop, retractable 2 mm PVC chemical resistant splash curtain

### Poly Batching & Dosing Container

Container Size: 20 Foot

#### Overview:

The Poly Batching & Dosing Container is a fully automatic three chambered Polydos preparation system ideal for polyelectrolyte solution preparation with adjustable concentrations from 0.01 to 0.5%. The three chambers of the Polydos polypropylene tank are for preparation, ageing and dosing, with the option of an agitator in the dosing chamber.

#### Benefits:

- Various options available: 1, 2 or 3 Chamber systems
- Touch screen controller: For easy use
- Reduced footprint: Compared to a traditional 2 tank system

### Electrochlorination Container

Container Size: 20 Foot

#### Overview:

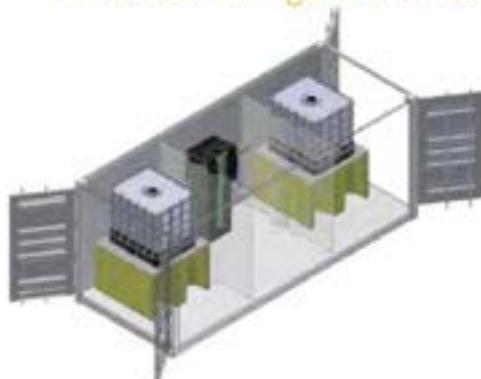

The electrochlorination process only requires salt, water and electricity for low-cost generation of disinfectant chemical, sodium hypochlorite (NaClO).

The NaClO solution has a maximum equivalent concentration of 7 g/L. This low concentration ensures a long half-life making it ideal for storage in a product tank as it does not dissociate like commercial solutions.

#### Benefits:

- Reduced transport and storage costs: Ability to generate chlorine on-site according to your requirements
- Low strength hypo solution is stable and non-toxic: Does not dissociate like commercial hypochlorite solutions
- Approved disinfection method: An alternative to chlorine-gas based systems with less safety requirements

## Product Range Overview

### **Chlorine Dioxide Generator Container**

Container Size: 20 Foot

#### **Overview:**

Based on patented underwater production technology, the Chlorine Dioxide Generator Container has the ability to generate chlorine dioxide ( $\text{ClO}_2$ ) using concentrated solutions of sodium chlorite ( $\text{NaClO}_2$ ) 25 to 31 % and hydrochloric acid (HCl) 31 to 33 %. The  $\text{ClO}_2$  solution is produced in a very small reaction chamber, installed in-line and injected directly into the water to treat. This ensures  $\text{ClO}_2$  is only present in the treated water to provide high safety and very effective consumption of the chemical precursors. These containers can be customised for any capacity level up to 200 kg  $\text{ClO}_2$ / hr.

#### **Benefits:**

- Effective underwater production technology: Chemical reaction yield of 95 to 98%, requiring less chemicals and generating less by-products
- Reduced footprint: Reaction chamber volume requirement 1/70th of a traditional installation
- Increased safety: Storage tank or safety zone for the generated  $\text{ClO}_2$  solution is not required. High concentration  $\text{ClO}_2$  is surrounded by water therefore reducing the likelihood that high concentration  $\text{ClO}_2$  is released into the atmosphere
- Low consumption of chemicals and power: Only 5.7 kg HCl per 1 kg of generated  $\text{ClO}_2$

### **Chlorine Gas Dosing Container**

Container Size: 20 Foot

#### **Overview:**

A complete vacuum controlled chlorine gas (Cl) dosing system with a dosage capacity up to 4 kg/h. Each container guarantees the highest degree of safety as the vacuum regulator is directly connected to the chlorine gas cylinder.

If the required dosing rate exceeds 650 g/hr, several cylinders with vacuum regulators can be installed in parallel on the vacuum side to prevent the cylinder from freezing.

#### **Benefits:**

- Low operation costs: Cl is a low-priced agent and has a long-term depot effect in water making it suitable for large water distribution systems
- Complete package: Stand-alone gas chlorination system and control facility
- Increased safety: Safety features can be added such as gas leak detectors, a pneumatic auto shut off system, an exhaust system with fog scrubbing system sprayer and a safety shower

### **Pumping System Container**

Container Size: 20 Foot

#### **Overview:**

A standard container modified to suit a range of Grundfos pumping systems. Each container is fitted with twin fluorescent lights, double general power outlet, vermin proof fixed ventilation louvers and whirly bird. The relevant Grundfos pumping system is anchored to the floor while the control panel is mounted to the wall. The container can also be painted a range of colours to blend into the surrounding landscape.

#### **Benefits:**

- Complete package: Stand-alone booster pumping and control facility
- Quick and easy installation: Reduces costs and time associated with having to size and build pump sheds in remote sites
- Additional space: Can be designed to provide room for tool storage

## PRODUCT RANGE

All Pumps manufacture and stock a range of systems to enhance the amenity of all sites. With our extensive and comprehensive product range, coupled with over 40 years experience we can produce an engineered solution to solve the most complex application. All of our systems are produced to meet the rigorous standard of ISO9001 accreditation as well as the relevant Australian standards. These systems include:

**Pressure Boosting Systems**

Javelin Pump systems cover a vast range of sizes and solutions from a small domestic mains water pressure booster system to a municipal multiple pump water supply system.

**Pump Stations**

Kwikflo packaged pump stations are assembled tank sizes ranging from 100L to 100,000L, in a range of materials including polyethylene, fibreglass & concrete we have a "complete packaged pump solution" to meet your site specific specifications. We stock a complete range of submersible pumps including dewatering, cutter, vortex, grinder & high pressure models for pressure sewer applications.

**Fire Booster Pumpset**

Fire Booster Pumpsets are available in diesel and electric drive configurations, assembled on a common fabricated base with pipework manifolds, valves, controls and accessories to provide a fully automated system complying with AS2941.

**Cold/Hot Water Circulators**

Systems can be designed as a single or multiple pump unit depending on the demand and how critical the application is. Systems can be a fixed speed or variable speed drive & can be controlled by a thermostat or timer controllers and are supplied with suction & discharge isolation and check valves and stainless steel manifolds.

## PRODUCT RANGE

## Grease Arrestors

Our range of pre-treatment devices are designed to remove fats, oils, grease and suspended solids that are generated from the commercial preparation of foods from cafes, restaurants, canteens & hospitals.

## Oil Water Separators

Oily water influent is introduced into an inlet chamber by means of a pump. Heavy solids settle out and 100% oil slugs rise immediately to the surface. The remaining oily water mixture flows through a stack of closely spaced, corrugated polypropylene plates. Both the smaller oil droplets and the fine solids are progressively separated. Downstream a baffle or oil dam prevents the collected oil from entering the outlet weir.

## Underground Storage Systems

The new modular "Aquallo" storage system has a standard capacity range from 5000 litres up to 30,000 litres (larger on request), they can also be connected in series to give larger storage capacities, the combinations are limitless.

## EDA Treatment Trains

The All Pumps EDA TT is the distinct economic and environmental choice for meeting water treatment discharge standards and compliance requirements. Capital and operating costs are greatly improved in comparison to traditional technologies with distinct process advantages.

## SINGLE VARIABLE SPEED PRESSURE BOOSTER

- ✓ Variable speed single pump system complete with pressure tank
- ✓ Mains isolator
- ✓ Discharge pressure transducer
- ✓ Motor mount Variable Speed Drive
- ✓ Run / fault notification on each pump controller
- ✓ BMS outputs
- ✓ Stainless steel manifolds
- ✓ Isolation & check valve fitted
- ✓ Hot dipped galvanised base plate.

## SINGLE VARIABLE SPEED PRESSURE BOOSTER

### Details

## DUAL VARIABLE SPEED PRESSURE BOOSTER

- ✓ Duty Standby/Duty Assist dual variable speed water booster system complete with pressure tank
- ✓ Discharge pressure transducers
- ✓ Individual VSD per pump
- ✓ Individual mains isolator
- ✓ Run / fault notification on each pump controller
- ✓ BMS outputs
- ✓ Stainless steel manifolds
- ✓ Isolation & check valves fitted for each pump
- ✓ Hot dipped galvanised base plate

## QUAD VARIABLE SPEED PRESSURE BOOSTER

## Details

## PUMP STATIONS

### SPECIFICATION

Model No.	KPPS100
Depth	700mm
Outer Dimensions	590mm x 590mm
Inner Diameter	410mm
Nominal Litres	100
Approximate Weight (Excluding pump)	15 kg
Access Cover	450mm x 450mm

### CONSTRUCTION

Polyethylene tank
Inlet pipe to be installed by plumber
All in-tank fittings incorporated in the packaged pump stations as follows:
- PVC ball and non-return valves barrel unions - PVC interconnecting pipework

### LIQUID HANDLED

Raw sewage	Trade waste
Effluent	Stormwater

### PUMP OPTIONS

### CONFIGURATION

Single Pump	Freestanding
-------------	--------------

## KPPS100 Pump Stations

PART NO.	CAPACITY	TYPE	PUMP MODEL	VOLTAGE	CONFIGURATION
742517	100 L	Sewage Cutter	DSK-10A	240	Single/Freestanding

11	1 Off Brass tap

## FRP PUMP STATIONS

Vertical fibreglass pump station with dry valve pit & horizontal emergency storage tank

**DIESEL FIRE HYDRANT**

All Pumps have developed a range of custom built fire service pumpsets to suit a variety of applications.

Built from high quality, reliable and proven components, these packages greatly simplify the installation of fire protection systems.

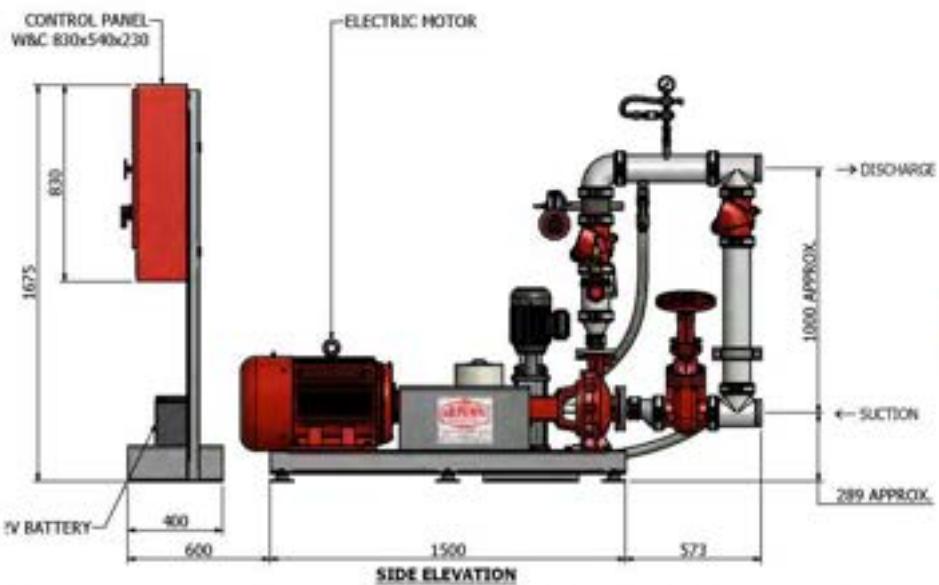

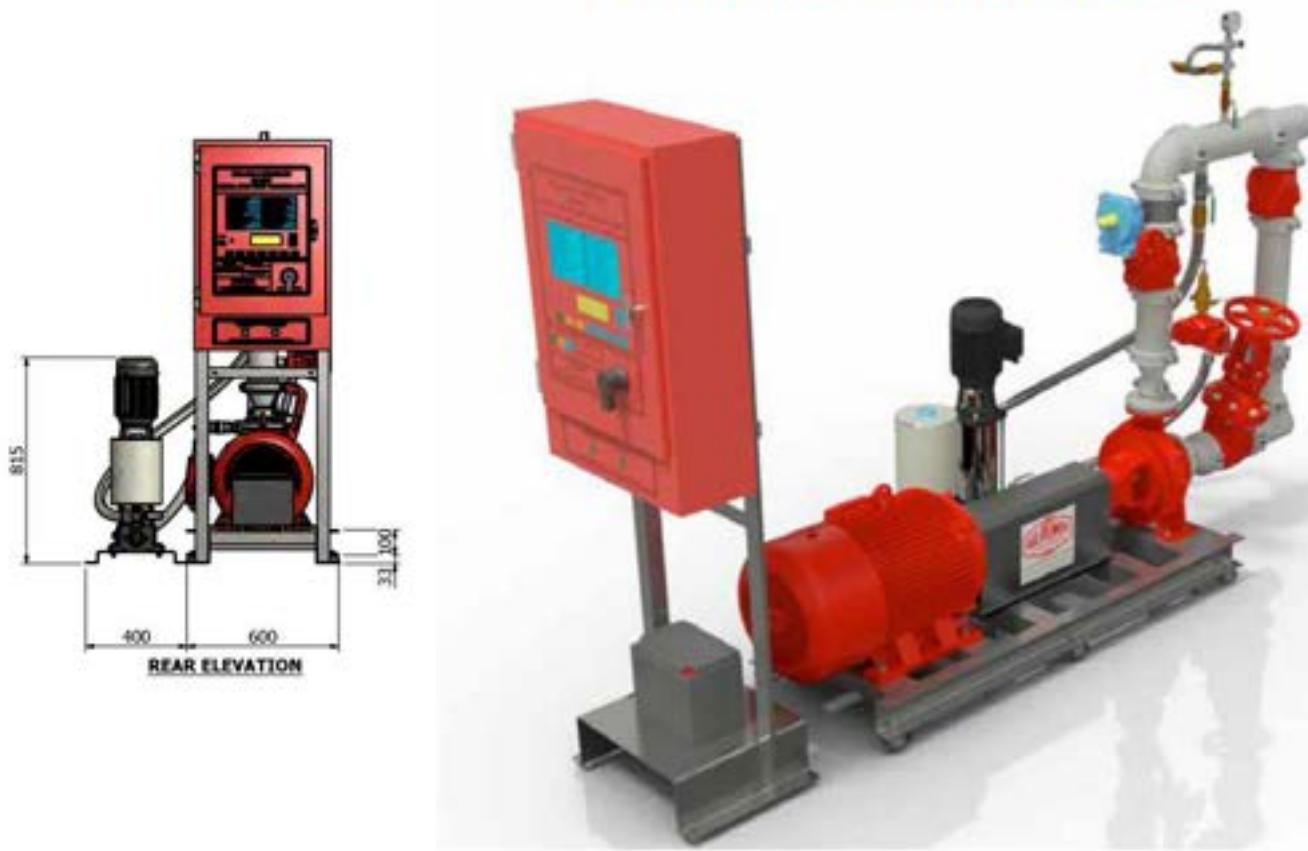

**FEATURES**

- ✓ Control panel
- ✓ Factory wired and tested prior to dispatch
- ✓ Diesel or electric driven
- ✓ Fully automatic
- ✓ Compact and easy to install
- ✓ Built to AS 2941

**DIESEL HYDRANT BOOSTER PUMP SET**

## DUAL HYDRANT SYSTEMS

All Pumps have developed a range of custom built fire service pumpsets to suit a variety of applications.

Built from high quality, reliable and proven components, these packages greatly simplify the installation of fire protection systems.

### FEATURES

- ✓ Control panel
- ✓ Factory wired and tested prior to dispatch
- ✓ Diesel or electric driven
- ✓ Fully automatic
- ✓ Compact and easy to install
- ✓ Built to AS 2941

## HYDRANT JACKING PUMPS

These units boost water to fire hose reels as and when it is needed. Built to AS 2941 they are supplied as a complete package.

FIRE HOSE REEL PUMP SET						FEATURES
STOCK CODE	DUTY	PUMP	MOTOR	PIPERWORK	CONFIGURATION	
341188	0.25l/s @ 55mH	QB80	0.75	25mm	Hydrant Jacking Pump	✓ Specially modified double-acting checkvalve
341200	1l/s @ 60mH	MT-46	1.5	32mm	Horizontal Multistage Fire Hose Reel Pump	✓ Gate valves and unions on suction and discharge
341212	2l/s @ 45mH	MT-84	1.5	32mm	Horizontal Multistage Fire Hose Reel Pump	✓ Easy removal of pumps for servicing
341224	1.5l/s @ 45mH	JV5-10	1.5	32mm	Vertical Multistage Fire Hose Reel Pump	
341236	2.7l/s @ 45mH	JV10-6	2.2	40mm	Vertical Multistage Fire Hose Reel Pump	

## Vertical Multistage Fire Hose Reel Pump Set

## CIRCULATOR SYSTEM

Circulator pumps, consisting of a control panel and pumps mounted on a vertical steel frame, are designed to circulate water from a storage tank, through a ring-main system and back to the storage tank for re-heating.

FEATURES	APPLICATIONS
✓ Pumps constructed from non corrosive material	✓ Domestic
✓ Single or dual unit	✓ Laundries
✓ 24 hour timer or temperature control	✓ Laboratories
	✓ Hydroponics
	✓ Large commercial premises
	✓ High rise buildings

PART NO.	MODEL NO.	DESCRIPTION
400024	HWC20SPS	Single hot water circulation pump system. Comprising of a 240 volt pump, single pump controller with valves and fittings all mounted on a galvanised steel wall bracket
400030	HWC20TPS	20mm dual hot water circulating pump system. Comprising of two (2) 240 volt pumps, alternating pump controller and stainless steel pump manifolds with valves and fittings all mounted on a galvanised steel wall bracket.
400036	HWC25TPS	25mm dual hot water circulating pump system. Comprising of two (2) 240 volt pumps, alternating pump controller and stainless steel pump manifolds with valves and fittings all mounted on a galvanised steel wall bracket.
400048	HWC32TPS	32mm dual hot water circulating pump system. Comprising of two (2) 240 volt pumps, alternating pump controller and stainless steel pump manifolds with valves and fittings all mounted on a galvanised steel wall bracket.
400060	HWCJHI240TPS	Dual hot water circulating pump system, comprising of two Javelin pumps model CHI2-40, 240 Volt alternating pump controller and stainless steel pump manifolds with valves and fittings all mounted on a galvanised steel baseplate.

## Dual Horizontal Multistage Circulator System

Dual Inline Circulator System  
20mm-32mm
