

## 10GSH GLOBAL STANDARD HIGH HEAD

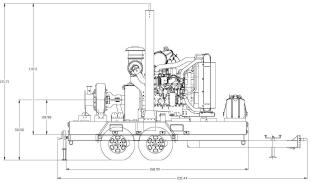

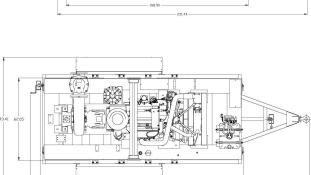

Global Pump® Standard High Head pumps are specifically designed to effectively handle a wide-range of liquids in applications such as liquid transfer, wash down, fire protection, fracking and jetting where high heads and pressure are required.

Global Pump Standard High Head pumps provide a dependable, highly efficient solution. The model 10GSH is capable of achieving maximum flows of 4,750 gpm (1,080 m³/h) and maximum total head of 340′ (104 m), with solids handling up to 1.5″ (38.1 mm) in diameter.

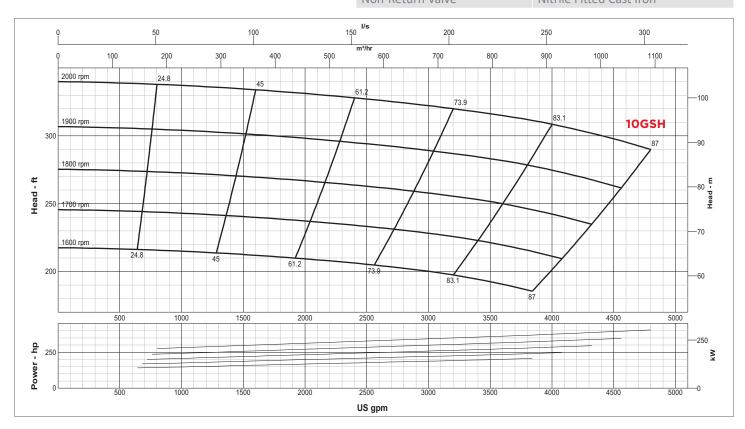

The standard 10GSH is powered by a water-cooled, 6-cylinder diesel engine. Alternative drives are available, including other diesel engines or electric motor options.

FEATURES	OPTIONS
Global Pump's rugged, heavy duty pumps are engineered specifically for portable application	Available with a variety of priming systems, including Global's Auto Prime® automatic priming system (compressor-fed venturi priming) or a diaphragm priming system
Non-return valve uses only a single moving part to allow full flow with minimal restriction	Mechanical seal with glycol (biodegradable optional) quench allows the pump to start and run dry
Standard engine control panel provides preset emergency shutdown protection and allows the addition of automatic level control	Global Pump's Environmental Box separates and silences air exhaust and returns liquid to the pump suction.
Fully guarded coupling	Fuel cubes for extended run times and/or remote location as required
Pump casings are hydrostatically tested to 50 psig (345 kPa) above the peak casing design pressure	Sound attenuated enclosure options
Skid-mounted formats with tie downs, lifting bail, and fork pockets	Hose racks, accessory containers and other custom features available as required
	Wide range of suction and discharge fittings including Global Pump's own "QD" Quick Disconnect fittings and accessories
