GRUNDFOS 

YOUR COMMITTED PARTNER FOR...

Working with Grundfos means to benefit from comprehensive engineering and project management expertise, such as:

- **Leading know-how**
- **Broad consulting skills**
- **Local support**
- **Long-standing experience**
- **Integrated solutions**

...OPTIMISED SOLUTIONS

We tailor our products and services to your individual requirements. Our keystones are:

- Pioneering technologies** <
- Performance driven view** <
- Close customer collaboration** <
- Outstanding quality** <
- Accurate delivery** <

**OUR
EXPERTISE**

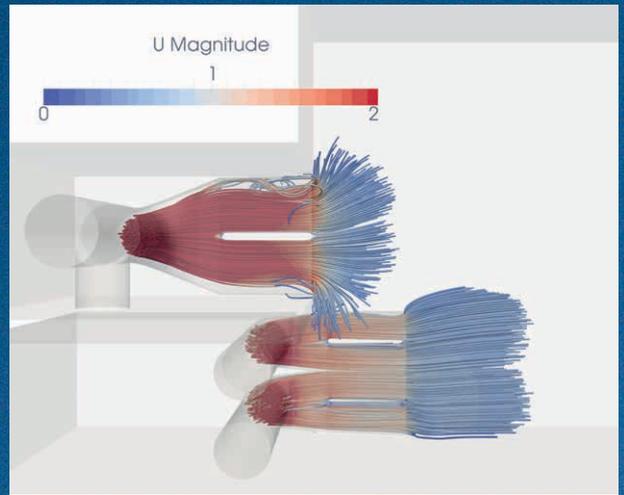

**IS PART
OF ANY
DELIVERY**

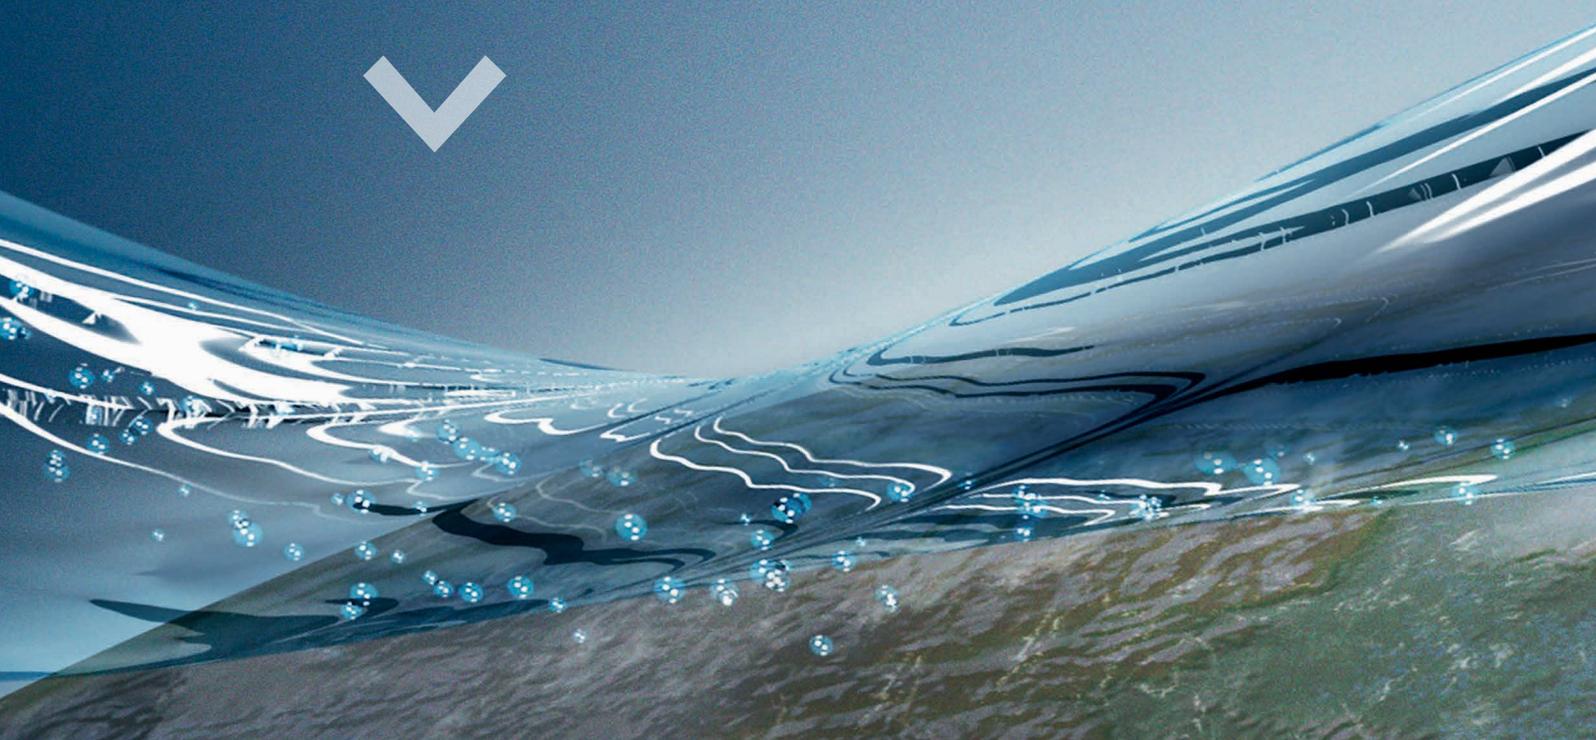

PROCESS DRIVEN ENGINEERING

By understanding the wide range of customer needs, we design lifecycle costs into solutions to make life easier for everyone. Profitability, innovation, responsibility and a high standard of quality are the keystones of our work. Our common goal: best efficiency to obtain maximum satisfaction.

PREDICTING FLUID FLOWS

Computational Fluid Dynamics (CFD) enable our analysts to simulate and understand fluid flows. This means that we are able to predict flow problems and optimise them before construction. CFD data allows comparisons between various design alternatives and provides a sound basis for decision-making before the actual investment.

PROJECT COMPETENCIES

We challenge the conventional ways of thinking, to offer you an innovative selection of tools and customisation options – plus: our wide range of services, such as energy audit, commissioning, service contracts and much more. Our Water Utility competency network ensures that complex projects get the expertise they require. With local expertise in markets around the world, we provide an optimised project execution.

SOPHISTICATED PRODUCTS

Grundfos supplies a wide range of products: From multistage CR and submersible pumps, to disinfection systems and massive sewage pumping stations – the Grundfos range has it covered. And what's more: Our pumps can always be customised to match your exact needs. And when the time comes to replace an old pump customers have our vast, continuously updated range from which to find the ideal pump – with our advice and support as standard.

OPTIMISED SOLUTIONS

We offer solutions and expertise within the following applications:

- > Raw Water Intake
- > Drinking Water Treatment
- > Water Distribution
- > Wastewater Transport
- > Flood Control
- > Wastewater Treatment
