## NEW DEVELOPMENT

### SCN D – CLOSE COUPLED MONOBLOC-VERSION

With the SCN-D series of the SOMA SINUS SODIAL® PUMP, SOMA PUMPS GmbH was the first to launch a new development on the market. The further development of the SOMA SINUS SODIAL® PUMP as a monobloc version is a SOMA PUMP, which does not require a bearing block, coupling and a complex base plate. In this version, the SOMA SINUS SODIAL® PUMP is therefore flanged directly to the drive.

This version is available in various sizes up to 40,000 l/h with a maximum counterpressure of 10 bar. A big advantage is that all wear parts of the pump are identical to the 15 bar version with bearing block. This means - no separate storage for the wear parts - 100% interchangeability between the variant with separate coupling and the directly flanged variant.

#### ADVANTAGES

- Close Coupled
- 30% shorter overall Size
- 20% cost savings
- lower maintenance costs
