POS. 1 & 2 - PUMP SERIES

HD = Unmounted Pump

POS. 3, 4, & 5 - PUMP SIZE

70A = 3" Suction, 2" Discharge

120 = 4" Suction, 3" Discharge

330 = 5" Suction, 4" Discharge

600 = 6" Suction, 6" Discharge

POS. 6 - MATERIALS OF CONSTRUCTION

I = Ductile Iron (DI)

S = Stainless Steel (316 SS)

POS. 7 - PORT POSITION & ROTATION

A = Right Hand Drive

B = Left Hand Drive

C = Right Side Mount,
Right Hand Drive

D = Right Side Mount,
Left Hand Drive

E = Left Side Mount,
Right Hand Drive

F = Left Side Mount,
Left Hand Drive

G = 600 Mount

POS. 8 - LOBE DESIGN

1 = Single Lobe

2 = Double Lobe*

* Hot clearance standard

POS. 9 - SEALING METHOD*

P = Packing

M = Mechanical Seals

C = Cartridge Mechanical Seals

* Four seals per pump

POS. 10 - SEAL TYPE

A = Type 1 Standard Packing

C = Type 2 Packing with Lantern Ring

D = Pure PTFE Packing with Lantern Ring

E = Pure PTFE Packing (Food Grade)

F = Type 42 Triple Lip Seal

H = Type 9T Mechanical Seal

L = Type 5610 Cartridge Seal

W = Wedgee Packing

POS. 11 - SEAL FLUSH

0 = None

1 = CW Vent to Seal Chamber*

2 = CCW Vent to Seal Chamber*

* API Plan 13

POS. 12 - PORT TYPE

A = NPT

Steel Material Flange Options

B = 125/150# Flat Face Flanged Ports

C = 125/150# Raised Face Flanged Ports

D = 300# Raised Face Flanged Ports

SS Material Flange Options

E = 150# Flat Face Flanged Ports

F = 150# Raised Face Flanged Ports

G = 300# Raised Face Flanged Ports

POS. 13 - INTERFERENCE FIT GEARS*

0 = Standard Gears in Gearcase

1 = IF Gears in Gearcase

* Gear fit determined by application duty point

POS. 14 - SHAFT BUSHINGS

A = Bronze (330 DI Only)

B = DU (70A/120A/600 DI Only)

C = Carbon

E = High-Temp Carbon

G = Tungsten Carbide

POS. 15 - SHAFT MATERIAL

A = High-Strength Armcro, Standard

B = Chrome Oxide Coated

POS. 16 - TUTRIDING

0 = None

1 = Tutrided Housing, Faceplate, & Impellers

POS. 17 - JACKETS

0 = None

1 = Pump Jacket

POS. 18 - CLEARANCES

0 = Standard (Temp ≤ 150°F)

A = Hot (Temp 150°F - 350°F)

D = Standard - Black Liquor Soap (Temp ≤ 185°F)

E = Hot with High-Temp Mods (Temp > 350°F)*

* Includes bearings, lip seals, & grease/oil

70A PUMP MOUNTING DIMENSIONS

All measurements are in inches.

70A PUMP MOUNTING DIMENSIONS WITH FLANGED PORTS

FLANGED PORT DIMENSIONS

PORT DIMENSIONS		
FLANGES	X	Y
150# FF	14-23/32"	15-5/32"
150# RF	14-23/32"	15-5/32"

NPSH_r DATA

PRIMING ABILITY

Performance curves indicating priming ability of pumps is based on test data obtained on new pumps. Priming ability of older pumps, because of larger clearances, will not be as accurate.

ABRASIVES & SLURRIES

The Heavy Duty process pumps are ideally suited for slurries as it is capable of handling a wide range of apparent viscosities and solid particle sizes. When sizing a process pump, you must determine the viscosity of the carrier fluid, particle size, and particle hardness.

The thicker the carrier fluid, the less recirculation of product through the fluid chamber clearances (slip), thus there is less erosive wear from any abrasive particle. If the carrier fluid is water thin, the abrasive particles are allowed to recirculate in the clearances, resulting in short wear life.

Particle size and hardness both affect the wear life of a process pump. Each process pump model has different clearance dimensions. If the particle is harder than the pump material construction and larger than the clearance dimension, the pump will generally have initial wear equal to that of the particle size and level off to a slower, constant wear rate. If the particle size is smaller than the pump clearances, the wear is less of a problem. A particle is therefore defined as abrasive if it is equal to or harder than the pump construction and larger than the factory set clearances in a new pump.

Knowing that the process pump has been successfully applied on abrasive slurries, we generally do not recommend pump speeds on inorganic slurries to be any greater than 190 RPM. Try to maintain the slowest possible speeds for any abrasive slurry. Wear life is relative; the Heavy Duty process pump will always do better than a gear or vane pump at identical operating speeds.

Maximum Recommended Pump Speeds For Existing Applications

Waste solvents, oils, paints, etc.	230 RPM
Municipal sludge/scum	190 RPM
Animal rendering	100 RPM
Asphalt with filler	100 RPM
Magnetic oxide slurries	150 RPM
Grain slurries (mash)	150 RPM
Clay coating slurries	280 RPM
Clay slip & ceramic slurries	50 RPM
Coal oil surface	190 RPM

SPHERICAL PARTICLE SIZE DATA

The chart at right shows the theoretical maximum and recommended maximum particle size that a pump will pass. This is strictly a function of geometry. Pumps will last longer if abrasive particles are smaller than internal pump clearances and softer than the internal pump parts. On slurries with maximum diameter particles, a maximum speed of 100 RPM is recommended to minimize crushing. Particles must be able to be sheared by pump impellers or the pump will stall.

Pump Model	Theoretical Maximum Diameter	Recommended Maximum Diameter
70A	1.25" [31.75mm]	0.75" [19.05mm]
120A	1.50" [38.10mm]	0.875" [22.23mm]
330	2.25" [57.15mm]	1.00" [25.40mm]
600	3.00" [76.20mm]	1.25" [31.75mm]

STEAM JACKET

CONSTRUCTION

The jacket has a fabricated, carbon steel, plate-type insert with an aluminum cast outer shell. The jacket is made in two-piece construction for field installation and/or pump maintenance access. Each half has 1/2" NPT (internal) in and out ports.

Rating:

- Steam or heat transfer fluids
- 150 PSI maximum pressure
- 500°F maximum temperature

NOTE: In conjunction with our program of continuous testing and design upgrading, all specifications are subject to change without notice. All data is approximate. Request a quotation for your specific application.

HEAVY DUTY FLANGE RATINGS (ASME CAST STAINLESS STEEL)

Heavy Duty Flange Pressure-Temperature Ratings (Stainless Steel CF-8M)

HEAVY DUTY FLANGE RATINGS (ASME CAST STEEL)

Heavy Duty Flange Pressure-Temperature Ratings (Steel ASTM A216 WCB)

NOTE: These charts show ratings for the flanges only. The maximum pump operating conditions must be considered. Consult the appropriate catalog for the maximum allowable pressure and temperatures. These ratings are non-shock pressure.

WARNING

RAPID TEMPERATURE CHANGE CAN RESULT IN FLANGE FAILURE AND LEAKAGE WHICH CAN CAUSE PROPERTY DAMAGE OR SERIOUS INJURY. DO NOT EXCEED CAST IRON TENSILE STRENGTH WHEN BOLTING FLANGES.

REGULATORY COMPLIANCE INFORMATION

ATEX

The Heavy Duty Series pumps' technical file is lodged in accordance with Article 13(1)(b)(ii) of ATEX Directive 2014/34/EU of 26 February 2014

THE FOLLOWING STANDARDS WERE USED TO VERIFY CONFORMANCE:

2006/42/EC – The Machinery Directive

EN 1127-1:2011 – Explosive atmospheres - Explosion prevention and protection - Part 1: Basic concepts and methodology

EN ISO 80079-36:2016 – Explosive atmospheres - Part 36: Non-electrical equipment for explosive atmospheres - Basic method and requirements

EN ISO 80079-37:2016 – Explosive atmospheres - Part 37: Non-electrical equipment for explosive atmospheres - Nonelectrical type of protection constructional safety "c", control of ignition sources "b", liquid immersion "k"

The Heavy Duty Series pumps comply with the European Directive 2006/42/EC

THE FOLLOWING STANDARDS WERE USED TO VERIFY CONFORMANCE:

EN ISO 12100:2010 – Safety of machinery - General principles for design

EN 809:1998+A1:2009 – Pumps and pump units for liquids - Common safety requirements

2011/65/EU – The Restriction of Hazardous Substances Directive
